

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

### Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

### About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

# MANUFACTURES.

## RETURNS FROM THE STATE OF NEW YORK.

### DOCUMENT 10.—No. 1.

*Report of Alvin Bronson to the Secretary of the Treasury, on the Manufactures of New York.*

ALBANY, 17th April, 1832.

SIR: You will receive, herewith, the information required, so far as it has been practicable to obtain it, by your letter of the 7th February last, which did not reach me until the 25th of that month.

In undertaking to accomplish the object in view, it was deemed impossible to procure, directly from all the manufacturing establishments in the State, the necessary information, in order to present it during "the present session" of Congress, as contemplated by the resolutions of the 19th of January. It was, therefore, considered advisable, 1st, to procure from authentic sources such statistical details as had already been collected. 2d, to employ agents in some of the principal manufacturing counties to visit the most extensive establishments, and obtain answers in detail to the queries furnished by the Treasury Department; and, 3d, to correspond with some of the proprietors of large manufactories, and procure, directly from them, the information required.

With regard to branches of manufacture carried on in private workshops, as "hats, shoes, saddlery," &c. it was considered altogether impracticable to procure, within the time limited, any satisfactory intelligence. No effort was made, therefore, to collect any.

The success which has attended the undertaking is equal, perhaps, to any expectation which could reasonably have been entertained.

1. An entire view of the cotton factories is presented. The facts were collected with great care by Mr. Richard P. Hart, of Troy, by correspondence with the proprietors and agents of factories, during the latter part of the year 1831 and the early part of 1832, and are, therefore, of the highest authority. If their statements are inaccurate, accuracy is wholly unattainable, as the sources of information are completely under their control. There is, also, an entire view of the iron establishments, made by Mr. Peter Townsend, of New-York, from a personal examination of all during the year 1831. Nothing more authentic can be obtained. The view of the woollen factories is incomplete. There are more than 200 of those establishments, principally small, in the State; and it would be the work of time to obtain an accurate account of them. The abstracts of the cotton, woollen, and iron establishments, do not furnish replies to all the queries contained in the circular; and it would be impossible to procure replies to all without devoting several months to the object. The salt manufacture of the State is exhibited in all its details, and with a minuteness which leaves nothing to be supplied. The sources of information are of the highest authenticity. From my own residence in the neighborhood of the manufactures, and from my business-connexion with their proprietors, I am enabled to add my testimony to the general accuracy of the information detailed.

2. The agents employed have obtained all the information in their power; and the statements furnished by them, and transmitted herewith, may be considered, together with the returns from proprietors, as presenting a fair average view of the condition and operations of similar establishments. Although the number of factories, of which detailed statements are presented, is small, in comparison with the whole number in the State, they may serve as a standard to determine the profits of the others. The only material difference of profit in different cases must arise from superiority in skill and management.

3. The statements procured by correspondence are few in number, compared with the number of establishments, to the proprietors or agents of which the queries were addressed. Indeed, it is hardly possible to procure the minute information required, excepting by a personal application to those in whose power it is to give it. Should the same information be desired at the next session of Congress, the summer and autumn would afford no more than time sufficient for the purpose.

It will be observed by the blank form which has been circulated, that a few of the questions contained in the circular from the Treasury Department were omitted, one or two divided, with a view to procure distinct answers, and one or two slightly varied in their terms to avoid embarrassment. The questions divided are Nos. 6 and 25; and the questions omitted Nos. 32, 35, 36, 37, and 38. It was considered altogether useless to include the four last in the blank, as intelligent answers were not to be expected from persons living at a distance from the place of importation, and not, therefore, familiar with the matters contained in them; and No. 32 was omitted because it was conceived that an answer might better be given by myself on an examination of the facts collected. Nos. 35, 36, and 38, were addressed to several intelligent gentlemen in the city of New York, and to several manufacturers in the interior, and their answers, as far as they have been received, are enclosed in the packet marked "correspondence, &c." No. 37, if it could be answered at all, would most properly be answered by myself on an examination of the facts collected.

In question 29, the words "with a corresponding reduction on all the imports," were omitted, because it was conceived that an inquiry taking the whole range of the tariff could not be answered by the practical manufacturers, for whom the blank was prepared. It was also conceived, as the question was calculated to embarrass, if not to mislead them, that it would be better to present the inquiry simply in relation to their own manufacture. It was proposed as a separate inquiry to several intelligent gentlemen, although it was, in fact, considered as a question which could best be answered by those to whom the information collected should be presented, by comparing the acknowledged profit with the consumption of foreign products, on which the proposed reduction of duty would take effect, the number of persons employed, and the amount of agricultural productions consumed, on the prices of which that reduction might also be expected to operate. There are, indeed, very great, if not insurmountable difficulties in arriving at a correct decision of this question by any person. Although every species of manufacture would be affected in a different degree, on account of the difference in the amount of duty paid upon the articles which enter respectively into their manufactures, yet there is a class of imports, upon which a reduction of duty would affect equally all manufacturing establishments, in which the number of persons employed are equal. The woollen would appear most likely to be benefitted by a reduction of the duties upon all the imports, than any other branch of manufacture, because wool pays not only a specific duty, relatively high as the prime cost is low, but also a high ad valorem duty; and, also, because oil, and other articles which enter into this manufacture, pay a duty exceeding the proposed limitation. The woollen manufacture would, therefore, seem better able to bear a reduction of duty on the imported rival articles, with such a corresponding reduction on other imports as is proposed, than either iron or cotton, excepting coarse cottons, on which the duty is considered merely nominal. Mr. Dexter, an experienced woollen manufacturer, concurs in the opinion that a reduction might be made on imported woollens, if the duties on wool and other materials used in the manufacture, were also reduced. Yet it is to be considered, on the other hand, that wool is at this moment very low in price, and that the woollen manufacture, as appears by the accompanying returns, is the one on which the least profit is realized. Whether the manufactories of iron could sustain themselves with such a reduction of duties, is matter of extreme doubt. Small establishments at a distance from the coast might do so; but those which, from the limited consumption in their vicinity, are compelled to seek a market at New York, (and this class comprehends the most extensive establishments in the State,) would, most probably, find their manufactures expelled by rival articles imported from abroad. With regard to the reduction of duties upon that class of imports referred to as falling upon all in proportion to numbers, as teas, sugar, coffee, articles of clothing, and every thing coming under the denomination of necessaries or comforts, within the reach of the laboring classes, the iron manufacture would be benefitted in a higher degree than cotton or woollen, because manual labor is employed to a greater extent in the former, and machinery to a greater extent in the two latter. The operation of the proposed reduction would also be to diminish, ultimately, the price of agricultural productions; for, if farmers could obtain their supplies of necessaries at a less price, their profits would be greater, and this increase of profit would induce an additional application of labor and capital to agriculture, until an increased supply of its productions should bring down their market value to their former relative standard. How far a reduction of duty on all imports to 12½ per cent. would affect the cotton, iron, and woollen manufactures, by affording articles of consumption at a lower price, is a question of extreme difficulty. Nothing but experience

can satisfactorily determine it; but, in the present condition of the woollen manufacture, there is reason to believe that it would be the first and the severest sufferer, notwithstanding a reduction of duty on the raw material; and there is equal reason to believe that the cotton manufacture would suffer less than any other.

It will be perceived that there is a great difference of opinion among those from whom answers have been received, with regard to the average profit of capital. All concur in ascribing to other pursuits a better return for capital than is yielded by their own. I am inclined to think it does not differ materially from the market value of money. The legal rate of interest is not an unerring criterion, for it is not unusual in this State that the actual value of money in the market exceeds the amount of interest which the law allows to be received upon loans, and it is, perhaps, quite as frequently below the legal rate. Investments which yield the greatest profits are, as a general rule, extra hazardous; and when the losses which are incurred are taken into the account, the average profits, it is conceived, will not differ materially from the interest of money. It is a common impression that money invested in trade in the country is more profitable than most other investments. As a general rule, a man with prudent management, who invests a few thousand dollars in this manner, and devotes his time to the business, will make 12 or 15 per cent.; but it is to be considered that he has incorporated his own labor with it, and when the value of his labor is deducted, he will not be a greater gainer than he would be if he had loaned his money at interest, and hired out his services to some other person. It is, in general, very much the same with regard to the profits of capital invested in land. A man may have a very small surplus production on hand at the end of the year, on a farm of one or two thousand dollars in value; yet he may, in the mean time, have subsisted himself and his family upon the proceeds of his industry applied to its cultivation, and the amount of the proceeds thus consumed, added to the surplus, will be compounded of the value of his services and the actual profit. It sometimes happens that a man borrows a sum of money (say \$1,000) paying the legal rate of interest, seven per cent., and by devoting his time and skill to the object of the investment, makes a very large profit, (say 25 per cent.) Now it is obvious that 18 per cent. is the wages of labor. He has by extraordinary skill procured a large return for his industry; but the capital employed has yielded but seven per cent. to the lender. It is conceived that money invested in lands in the country, cultivated by the proprietors, is, as a general rule, as profitable as money loaned at interest. Ground rents in the city are generally much below the legal rate of interest; but they are to be regarded as an exception to the general rule:—1st, because they are generally the property of capitalists, who aim at a secure rather than a profitable investment; and, for the same reason, often loan their money below the legal rate of interest; and, 2d, because the progressive advance in the price of lots often induces them to retain them at a low rent, and frequently at no rent at all. The same remarks in substance may be applied to lands leased in the country.

*Question 35.* Are not the manufactures of salt and iron, remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?

This question cannot, from the nature of the cases to which it relates, be answered in general terms. There is, in almost every case, some circumstance peculiar to itself, which affects the answer applicable to it. For instance, the salt manufactures at Salina, in Onondaga county, New York, undoubtedly protect themselves to the extent of the demand for them, to a certain distance in every direction from the point of manufacture; but this distance varies also in every direction. In the direction of the Hudson river, the manufacture has the benefit of canal transportation to Albany, where it can be carried at an expense of six cents per bushel. Here it meets the foreign salt, which has the benefit of river transportation from New York to Albany, where it can be carried for 3½ cents; and, with the present reduced impost, the foreign will make Albany the exterior of the circle supplied by the domestic. In this direction, the distance is only 160 miles. In the opposite direction, the exterior of the circle is much more distant. It is conveyed nearly 200 miles on the Erie canal to Buffalo, where it finds water transportation to the Territory of Michigan, 300 miles further, and thence to still more distant regions. The circle is bounded by the supply of rival articles, and it is obvious that the distance of the boundary will, in any direction which the manufacture takes in pursuit of a market, be in an inverse ratio of the expense of carrying it to the point at which the rival article enters into competition with it.

The extent of the circle will also be varied by any change in the amount of duty imposed either on the domestic or the foreign article. To recur to the case of salt; the duty on the foreign article has recently been reduced ten cents per bushel. The price of transporting a hundred pounds weight to Albany from New York is about seven cents; the statute bushel of salt is 56 pounds, or two bushels make a hundred pounds gross weight. Now, if the foreign salt could bear a competition with the domestic in the New York market before the duty was reduced, it could, with the reduction of duty, pay its own transportation to Albany,

and meet the domestic salt in the Albany market, with an advantage of three cents per bushel in its favor more than it had in the New York market. If the competition were equal in New York (and it was decidedly in favor of the foreign,) the result would be to expel the domestic salt from the Albany market, in case the supply of the foreign article were equal to the demand; and that it will be there is no doubt.

The imposition of a duty or excise upon the domestic article operates precisely like a reduction of the duty or impost on the foreign. It reduces the circle supplied by the domestic. If the duty of 12½ cents, imposed by the laws of New York on every bushel of salt manufactured at Salina, were to be removed, it would more than pay the whole expense of its transportation to the city of New York. The enlargement of the circle supplied by the domestic article in any given direction from the point of manufacture, in consequence of the reduction of the duty upon it, would be precisely the measure of the distance to which it could be carried in that direction for a sum equal to the amount so reduced, if the circle were not bounded by rival articles. But, as this is the case, the rival articles are to be forced back as the domestic advances, and the resistance in the one case may be considered equal to the progressive force in the other, where the facilities of transportation in both directions are equal. Assuming the expense of transportation to be equal in both directions, if five cents will pay the transportation of a bushel of salt one hundred miles, at the exterior of the circle supplied by that article, a reduction of a duty upon it to the amount of five cents will enlarge the circle fifty miles in that direction.

The ability of an article of domestic manufacture to protect itself in a certain circle around the point of manufacture, is governed also by the extent of the demand for it. No foreign salt can compete with the Onondaga at the point of manufacture, but the market there is extremely limited. It is, therefore, compelled to seek distant markets. The demand at the point of manufacture is supplied directly from the works, as there are a great many small manufacturers who are willing to barter their productions. But the converse is, as a general rule, true of large establishments. They cannot enter into retail operations; their productions are often contracted for in advance for the supply of distant markets. The practice of paying their workmen weekly makes their business, of necessity, a cash business:—they cannot barter, therefore, or dispose of their productions in small portions, or on uncertain credits. The consequence is, that articles manufactured in the interior are frequently transported to New York for a market, and carried directly back by retailers to be vended in the neighborhood of the manufactory. Thus, as a general rule, the productions of large establishments in the interior have to bear the burden of transportation to the city of New York for a market, as wholesale operations are not carried on to any considerable extent in the interior. This is a very serious burden upon articles manufactured at a distance from the market, which are either bulky or heavy in proportion to their value.

So many circumstances are to be taken into the account, that it is impossible to reduce to precision the ability of any given article of domestic manufacture to protect itself, or the extent of the circle in which the protection is complete. Every case is governed by laws peculiar to itself, and the reply will, of course, be different in every case.

#### COTTON.

It will be perceived by an examination of the statements in relation to the cotton manufactories, that the profits on the capital employed have not, after deducting the expense of repairs, superintendence, &c. exceeded an average of seven per cent. It appears incidentally that some of these establishments were ruinously unproductive in the outset; and although the questions do not elicit an explanation of the cause, there can be little doubt that it is generally referable to the precipitancy with which their proprietors embarked in a new pursuit, impelled by the force of legislation, or by political events, without a due regard to economy, or the proper adaptation of buildings and machinery to their designs. Of the accuracy of these statements no doubt is entertained. The individuals who have made them are generally men of character and respectability; and the idea of any intentional misrepresentation on their part is inadmissible. Their means of intelligence are of the highest character; they are generally agents or proprietors of the establishments of which they have furnished statements. Although the average profit of capital invested in cotton manufactures has not exceeded the average profit of capital otherwise employed, it will be perceived that particular establishments have realized greater returns on their investments than others. This difference, however, it is believed, is to be traced to superior management, or more fortunate combinations of circumstances, or both; to the same causes, by the force of which an individual cultivating a hundred acres of land, will subsist himself and family, and have, at the end of the year, a surplus of the products of his industry; while another individual, his nearest neighbor, with the same quantity of land, and with equal advantages in all respects, will, at the end of the year, be found with a burden of debt. It will appear, too, that pri-

rate manufacturing establishments exhibit a greater average profit than joint-stock establishments. But this apparent difference will be found to be, in most cases, less than would at first glance be supposed. Individual proprietors are usually the superintendents of their own establishments: they pay nothing, therefore, for superintendence, but the value of their own labor is contained in the amount of their profits; and if the expenditure, on account of superintendence, &c. which their own services have saved, were deducted from that amount, as it should be, the balance would not much exceed, as a general rule, the average rate of profit in joint operations. A reason, however, may be found in the superior vigilance of individual interest why the average rate of profit should be somewhat greater. Individual proprietors may also avail themselves of favorable circumstances to make advantageous arrangements by assuming responsibilities, which agents, whose authority is always limited by regulations, would not be able to assume.

The cotton manufacturers are opposed to the removal of the duty upon foreign goods of the same description as those which they produce. Although they believe they are able to compete, in the manufacture of coarse cottons, with the British manufacturers, they are apprehensive that a reduction of the duty, to a considerable extent on the imported, might induce the latter to attempt to break them down by sending large supplies into the United States, and vending them at a present loss, with a view to an ultimate gain; and that their vast superiority of capital would give them great advantages in such a contest. At all events, they apprehend that much temporary individual embarrassment and loss might ensue, without any permanent gain to the public. It is believed that the difficulty of apportioning such temporary loss among the foreign manufacturers in proportion to their ultimate gains, is so great as to afford effectual security against this evil. The apprehension, in which so many of the cotton manufacturers concur, that a foreign article, equal in appearance but inferior in quality with theirs, might compete successfully with theirs, appears to me quite groundless. Such an article would, in my opinion, find its market value controlled by quality. It is also apprehended, as there are many manufactures of the finer cotton fabrics which are barely able to compete with the foreign, that a reduction of duty on the imported would force them into the manufacture of the coarser fabrics, and that the increased competition would glut the market with the latter, and produce much temporary loss. For this apprehension there seems to be some ground. But, without inquiring further into the foundation of these opinions, if one of the positions assumed by the Anti-Tariff Convention be true, that the duty on coarse cotton fabrics is nominal merely, as the domestic manufacture is exported, and the foreign of the same description is never imported; and if the object of a readjustment of the tariff be to reduce the revenue, it may be worthy of consideration whether a reduction of the duty on coarse cotton fabrics might not, by possibility, lead to an increase of revenue; whether, at all events, such a reduction be not totally unconnected with the object in view, as no revenue is derived from that source. It may be worthy of consideration, also, as the supply of the domestic manufacture is abundant, and the price at times exceedingly reduced, and always regulated by competition, whether any section of the country can be permanently benefitted by a reduction of duty on the foreign article; whether, in the actual state of that manufacture, any section of the country would look upon such a reduction in the light of a concession.

#### IRON.

It will be perceived by the returns, that iron castings are, as a general rule, the most profitable species of the iron manufacture; and the reason probably is, that they are less within the reach of foreign competition, and generally conducted by private enterprise. Castings include not only stoves and articles of a similar nature in general use throughout the country, which must be accommodated in fashion to the prevailing taste, but machinery and other articles which are made to order, and are constantly varying in size and pattern to suit particular establishments. These are of necessity, therefore, to a great degree, manufactured at home, and the price will be principally determined by domestic competition. Capital employed in this species of the iron manufacture appears to average ten per cent. It is believed that this superiority of profit over the average profit of other branches of the iron manufacture is to be accounted for only by the causes above assigned, particularly as the duty on imported castings is lower than that on any other species of manufactured iron. It may, therefore, be considered nearly, if not wholly, independent of foreign competition; and the superior profit is an evidence, also, that domestic competition, in that branch, has not yet reached its maximum. These remarks are applicable only to establishments in the interior of the State of New York, from which the returns have been derived. Whether they will justly bear a more extended application to the full extent of what has been said, may be doubtful.

Upon reflection, I have considered it impossible to furnish a satisfactory reply to question No. 37. It appears to be applicable to American manufactures generally; and the term "consumption" would seem to include not merely the raw materials used in the process of manufacture, but the whole amount of all they consume. The aggregate profit on capital and labor employed in manufacturing, would be precisely the difference between production and consumption; and this difference, if it could be ascertained, would be precisely the proportion required.

It will be perceived that there is a general concurrence in the returns from manufacturing establishments, in stating the wages of the laboring classes, and that the rate of wages is nearly uniform throughout the State. The average wages of common laborers is about \$10 per month, besides board; when hired for a single day, 75 cents, without board. The average wages of mechanics is \$1 25 per day, without board. Most of the laborers employed in manufacturing establishments are of as high a grade as carpenters or masons, and their wages will average about the same.

In estimating the comparative product of the various branches of industry, the rate of wages paid for labor is worthy of consideration. In relation to labor employed in manufactures or the mechanic arts, it is generally high compared with agricultural labor, and equally high compared with that employed in, and connected with, commerce, as lumbering, rafting, boating, coasting, navigation, &c.

The payment of high wages does not always prove that a particular branch of manufacturing industry is at a given period prosperous; for the proprietors may find the alternative presented of yielding an undue proportion of the product of their business to the laborer, or of abandoning the pursuit, and thereby foregoing the amount of profit which they might otherwise have derived from it. Yet, where a portion of the industry of a country, so great as that of manufactures and the mechanic arts, pays high wages throughout all its branches, and that too in a country like ours, with a wide field for labor, with a population possessing, beyond any other, intelligence, ingenuity and enterprise, and changing their pursuits with facility, we cannot resist the inference that such pursuits are more productive than others, which yield to labor a more stinted reward.

Capital and labor undoubtedly tend to equalize themselves by seeking employments which yield the greatest returns, and, by increasing competition in the branches to which they are applied, and diminishing it in those from which they are withdrawn, to reduce to the same level of profit all which are equally inviting. Agriculture is more inviting to capital than other investments, because its losses are fewer: to labor it is more so than most other employments, because it is less irksome, and involves fewer sacrifices of comfort. Where the attractions are equal, there is a strong tendency to an equalization of profit; but the process of equalization is likely to be slow, as the policy of a government is fluctuating, or its external relations subject to frequent vicissitude and change. The effect of these causes is to produce a great demand for labor at one time, and to throw laborers out of employment at others. Higher wages are necessary, therefore, to induce them to enter into pursuits which hold out to them the prospect only of a temporary employment. Should the policy of the country become fixed, so that it might be relied on with certainty for a course of years, it is believed that the wages of labor in one department of industry would differ from that in another only as one should be superior to another in its freedom from restraints, and in the facility with which a practical knowledge of it might be acquired.

It will be observed that the remarks above made, consist principally of inferences drawn from the facts to which they relate. They will not be considered either as impeaching or defending any system of economy; and it is believed that they contain nothing inconsistent with the plan of adjusting the existing tariff upon principles which, without affecting the immediate prosperity of manufactures, will remedy acknowledged defects, and promote, ultimately, the interests of every department of industry.

All the returns which have been received will be enclosed in two separate packets, and transmitted by this day's mail addressed to you. Some others will probably be furnished in the course of a few days: if so; they will be immediately forwarded to you.

As soon as the accounts of my agents shall be presented, and audited by me, and some other accounts for contingent expenses, postage, &c. shall be prepared, I will forward them to you.

I am, very respectfully,  
Sir, your obedient servant,

ALVIN BRONSON.

Hon. LEWIS McLANE, Secretary U. S. Treasury Dept. Washington.

## DOCUMENT 10.—No. 2.

*Cotton Manufactory belonging to Benjamin Jackson, Poughkeepsie, Dutchess County, New York.*

| QUESTIONS.                                                                                                                                                             | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                 |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. By what power—water, steam, or what other?                                                                                                                          | 1. Water power on the Wappingoes Creek.                                                                                                                                                                                                                                                                                                                                  |
| 2. When established; and whether a joint stock concern?                                                                                                                | 2. Originally established in 1813 or 1814. Whether originally joint stock, or individual, or partnership, do not know. Has been owned by the present proprietor since 1830.                                                                                                                                                                                              |
| 3. Capital invested in ground and buildings, water power and machinery?                                                                                                | 3. The agent is ignorant of the capital invested.                                                                                                                                                                                                                                                                                                                        |
| 4. Average amount in materials, in cash, for the purchase of materials & payment of wages?                                                                             | 4. Cash paid for wages out of materials, 2,000 dollars per month.                                                                                                                                                                                                                                                                                                        |
| 5. Annual rate of profit on the capital invested since the establishment of the manufactory?                                                                           | 5. The owner, Benjamin Jackson, resides in the city of New York. Mr. King, the agent, says that the cotton is purchased by Mr. Jackson, and sent by him from New York to the manufactory. The goods manufactured are sent by the agent to Mr. Jackson in New York, and sold by him. The agent is ignorant of the costs of the cotton, and also of the sale of the goods. |
| 6. How much of the capital is borrowed, and what interest is paid on it?                                                                                               | 6. The agent cannot answer.                                                                                                                                                                                                                                                                                                                                              |
| 7. What has been the rate of profits annually for the last three years:—if a joint stock company, what dividends have been received?                                   | 7. The agent cannot answer.                                                                                                                                                                                                                                                                                                                                              |
| 8. What portion of the income of the company has been converted into fixed capital, or retained for contingent or other objects, and, therefore, not annually divided? | 8. The agent cannot answer.                                                                                                                                                                                                                                                                                                                                              |
| 9. Causes of the increase or decrease of profit at different periods of time?                                                                                          | 9. The increase and decrease of profit, at different periods, is generally caused by our market being overstocked by the importation of foreign goods of similar quality to those manufactured here.                                                                                                                                                                     |
| 10. Rates of profit on capital otherwise employed in the same county and State?                                                                                        | 10. From six to ten per cent.                                                                                                                                                                                                                                                                                                                                            |
| 11. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                 | 11. For the last two years, there has been made, per month, from five to six thousand yards of ten hundred sheeting, varying in price from 8½ to 10½ cents per yard.                                                                                                                                                                                                     |
| 12. Quality and value of raw materials annually used, distinguishing between foreign and domestic products?                                                            | 12. Ten thousand pounds of cotton per month, he thinks cost from 10 to 12 cents per pound.                                                                                                                                                                                                                                                                               |
| 13. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                        | 13. Cannot answer.                                                                                                                                                                                                                                                                                                                                                       |
| 14. Number of men, women, and children employed, and average wages of each class?                                                                                      | 14. 11 men, average wages per month, \$6; 43 girls, above 16 years old, average wages, \$2 per week; 25 small hands, from 9 to 15 years old, average wages, \$1 25 per week.                                                                                                                                                                                             |
| 15. How many hours a day employed, and what portion of the year?                                                                                                       | 15. Twelve hours per day is the time calculated upon. Usually there are from three to four days stoppage in a year for holy-days, 4th July, &c.                                                                                                                                                                                                                          |
| 16. Rate of wages of similar classes otherwise employed in the same State and county?                                                                                  | 16. About the same as those employed in the manufactory.                                                                                                                                                                                                                                                                                                                 |

## DOCUMENT 10.—No. 2—Continued.

| QUESTIONS.                                                                                                                                                                                                                                             | ANSWERS.                                                                                                                       |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------|
| 17. Number of horses or other animals employed?                                                                                                                                                                                                        | 17. Three horses.                                                                                                              |
| 18. Whether the manufactures find a vent at the manufactory? If not, how far they are sent to a market?                                                                                                                                                | 18. No sales at the factory. Sent to the New York market, about eighty miles.                                                  |
| 19. Whether foreign articles of the like kind enter into competition with them at such place of sale?                                                                                                                                                  | 19. Yes.                                                                                                                       |
| 20. Where are the manufactures consumed?                                                                                                                                                                                                               | 20. Principally in the United States. The South and West consume the most.                                                     |
| 21. Whether any of the manufactures are exported to foreign countries? If so, where?                                                                                                                                                                   | 21. Some of the manufactures are sent to South America.                                                                        |
| 22. Whether the manufacture is sold by the manufacturer for cash? If on credit, at what credit? If bartered, for what?                                                                                                                                 | 22. Sold on a credit of about six months.                                                                                      |
| 23. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased? how much in each year from the establishment of the manufactory? and whether the increase has been in the materials or the labor, and at what rate? | 23. The cost to the manufacturer has decreased in consequence of the improvement in machinery. Cannot tell the rate.           |
| 24. The prices at which the manufacture has been sold by the manufacturer since he establishment?                                                                                                                                                      | 24. See No. 11.                                                                                                                |
| 25. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                             | 25. The present duties, if no fraud is practised.                                                                              |
| 27. What portion of the cost of your manufactures consists of the price of the raw material? what portion of the wages of labor, and what portion of the profits of capital?                                                                           | 27. Cannot tell.                                                                                                               |
| 28. What amount of the agricultural productions of the county is consumed in your establishment, and what amount of other domestic productions?                                                                                                        | 28. In agricultural productions, \$375 per month; and of other domestic productions, \$50 per month.                           |
| 29. What quality or amount of manufactures, such as you make, is produced in the United States, and what amount in this State?                                                                                                                         | 29. Cannot tell.                                                                                                               |
| 30. If the duty upon the foreign manufacture of the kind of goods which you make, were reduced to 12½ per cent., would it cause you to abandon your business, or would you manufacture at reduced prices?                                              | 30. Were the duties on foreign goods, of the kind manufactured here, reduced, it would be as well to discontinue the business. |
| 34. Average profit of money or capital in your county?                                                                                                                                                                                                 | 34. Seven per cent.                                                                                                            |
| 35. Average rate of wages in your county?                                                                                                                                                                                                              | 35. From six to twelve shillings per day.                                                                                      |

## DOCUMENT 10.—No. 3.

*Farmers' Manufactory of Cotton, situate in the town of Schaghticoke, in the County of Rensselaer in the State of New York, March, 1832. R. P. Hart, Agent.*

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>1. By what power—water, steam, or what other?</p> <p>2. When established; and whether a joint stock concern?</p> <p>3. Capital invested in ground and buildings, water power, and machinery?</p> <p>4. Average amount in materials, in cash for the purchase of materials, and payment of wages?</p> <p>5. Annual rate of profit on the capital invested since the establishment of the manufactory?</p> <p>6. How much of the capital is borrowed, and what interest is paid on it?</p> <p>7. What has been the rate of profits annually for the last three years? If a joint stock company, what dividends have been received?</p> <p>8. What portion of the income of the company has been converted into fixed capital, or retained for contingent or other objects, and, therefore, not annually divided?</p> | <p>1. Water.</p> <p>2. 1810, 1818, and 1826. Joint stock company.</p> <p>3. 116,000 dollars.</p> <p>4. 30,000 dollars.</p> <p>5. The loss far exceeds the profits taken from the commencement, to wit, 1810.</p> <p>6. 30,000 dollars, at 7 per cent.</p> <p>7. In answer to this inquiry, I have to say that, during the year 1828, the markets for the coarser fabrics of cotton goods were much depressed by considerable importations coming in competition with our own manufactures, so that our profits did not exceed seven and a half per cent. The extension of the minimum, by the tariff of 1828, induced many of the manufacturers to change from the coarser to the finer fabric, which, with the almost total suspension of importations, relieved the markets; and the cloths made from yarns of Nos. 14 to 22, advanced so that the profits of the year 1829 were about ten per cent. This improvement in prices brought many new spindles into operation, by which the market was again overstocked by the domestic supply, and reduced the profits of 1830 to about 8½ per cent. During 1829 and 1830 many new printing establishments were put in operation, which cleared the market of the goods made of yarns from Nos. 14 to 30. This demand caused much commotion among the manufacturers, and prices advanced so, that 1831 closed with profit of 15 per cent.: I wish to be understood in giving the per centage of profits. The deterioration of the machinery, buildings, &amp;c., are not taken into consideration.</p> <p>The present year has commenced with very unfavorable prospects both to the printers and manufacturers. Cloths which were purchased the last year at 6 to 8 cents per yard, are now in the market, handsomely printed, at 6½ to 9 cents per yard. These are less prices than have ever been known before; and if the manufacturer has to reduce the price of his goods in the same proportion as the printer, the business of the present year must close with a loss.</p> <p>8. The whole income has been invested in fixed capital. No dividend has ever been made.</p> |

| QUESTIONS.                                                                                                                                                                                                                                             | ANSWERS.                                                                                                                                      |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| 9. Causes of the increase (or decrease) of profit at different periods of time?                                                                                                                                                                        | 9. See answer to inquiry No. 7.                                                                                                               |
| 10. Rates of profit on capital otherwise employed in the same county and State?                                                                                                                                                                        | 10. From 6 to 20 per cent.                                                                                                                    |
| 11. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                 | 11. Amount of goods made annually have been from 30,000 dollars to 70,000 dollars, principally 3-4 and 4-4 shirtings, of yarns Nos. 16 to 24. |
| 12. Quantity and value of raw materials annually used, distinguishing between foreign and domestic products?                                                                                                                                           | 12. 25,000 dollars domestic, 10,000 dollars foreign.                                                                                          |
| 14. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                      | 14. 31 men, at \$6; 71 girls, at \$2 30; 66 boys, at \$1 50; 24 boys, at 87 cts. per week.                                                    |
| 15. How many hours a day employed, and what portion of the year?                                                                                                                                                                                       | 15. 12 hours.                                                                                                                                 |
| 16. Rate of wages of similar classes otherwise employed in the same State and county?                                                                                                                                                                  | 16. The manufacturers pay higher wages than the farmers.                                                                                      |
| 18. Whether the manufactures find a vent at the manufactory? If not, how far they are sent to a market?                                                                                                                                                | 18. A small portion of the goods made are sold at the factory. Most of them are sent to the city of New York for a market.                    |
| 19. Whether foreign articles of the like kind enter into competition with them at such place of sale, and to what extent?                                                                                                                              | 19. Not to any very great extent.                                                                                                             |
| 20. Where are the manufactures consumed?                                                                                                                                                                                                               | 20. Principally in this country. I understand considerable quantities are exported from Boston and Baltimore.                                 |
| 21. Whether any of the manufactures are exported to foreign countries? If so, where?                                                                                                                                                                   | 21. A proportion are exported.                                                                                                                |
| 22. Whether the manufacture is sold by the manufacturer for cash? If on credit, at what credit? If bartered, for what?                                                                                                                                 | 22. Usually sold on a credit of 6 to 8 months.                                                                                                |
| 23. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 23. There has not been much variation in the cost of the raw materials, or the labor, within the last three years.                            |
| 24. The prices at which the manufacture has been sold by the manufacturer since the establishment?                                                                                                                                                     | 24. From 6 to 25 cents per yard.                                                                                                              |
| 25. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                             | 25. The present duty is a full protection to cotton goods not exceeding in value 6 to 12 cents per yard.                                      |
| 26. Is any change necessary, in levying or collecting duties on such articles, to prevent fraud?                                                                                                                                                       | 26. I know of none.                                                                                                                           |
| 27. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                           | 27. $\frac{1}{3}$ in the raw material; $\frac{1}{3}$ in labor, &c.                                                                            |
| 28. What amount of the agricultural productions of the county is consumed in your establishment, and what amount of other domestic productions?                                                                                                        | 28. 8,000 dollars agricultural productions; 20,000 dollars other domestic productions.                                                        |
| 29. What quantity or amount of manufactures, such as you make, is produced in the United States, and what amount in this State?                                                                                                                        | 29. Amount of cotton manufactures in the State of New York is about \$3,520,000.                                                              |

DOCUMENT 10.—No. 3—Continued.

| QUESTIONS.                                                                                                                                                                                                | ANSWERS.                                                                                                                                                 |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| 30. If the duty upon the foreign manufacture of the kind of goods which you make, were reduced to 12½ per cent., would it cause you to abandon your business, or would you manufacture at reduced prices? | 30. Should continue the business at 12½ per cent.                                                                                                        |
| 31. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                            | 31. Cannot say.                                                                                                                                          |
| 32. Is there any pursuit in which you could engage, from which you could derive greater profits, even after a reduction of the import duties to 12½ per cent.?                                            | 32. There might be other pursuits more profitable, but the large amount invested would prevent a change, as a change might sacrifice the capital.        |
| 33. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of six per cent., and how gradual should the reduction be?                               | 33. The fact is now well established, that the domestic competition will keep the profits at its lowest standard without the aid of foreign competition. |
| 34. Average profit of money or capital in your county?                                                                                                                                                    | 34. From 6 to 20 per cent.                                                                                                                               |
| 35. Average rate of wages in your county?                                                                                                                                                                 | 35. Variety; as great as men's capacities; from 25 cents to \$5 per day.                                                                                 |

Mr Hart is a very active, industrious, intelligent manufacturer. He is a proprietor, and one of the agents of the establishment of which he has furnished the within account. The general abstract of all the cotton factories in the State was furnished by him.

J. A. DIX.

DOCUMENT 10.—No. 4.

*The Phoenix Cotton Manufactory, situate in the town of Middlefield, in the County of Otsego, in the State of New York, March, 1832.*

| QUESTIONS.                                                                                   | ANSWERS.                                                                                                                                                                                                                                                                                 |
|----------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. By what power—water, steam, or what other?                                                | 1. By water power.                                                                                                                                                                                                                                                                       |
| 2. When established, and whether a joint stock concern?                                      | 2. Is a joint stock concern, and was established in 1819.                                                                                                                                                                                                                                |
| 3. Capital invested in ground and buildings, water power and machinery?                      | 3. The cotton mill and spinning machinery and buildings were erected in 1814, at an expense of 40,000 dollars, and passed into the hands of the present company in 1819, for twenty thousand dollars. Since which they have expended in grounds, new erections, and machinery, \$17,500. |
| 4. Average amount in materials, in cash for the purchase of materials, and payment of wages? | 4. \$15,600.                                                                                                                                                                                                                                                                             |
| 5. Annual rate of profit on the capital invested since the establishment of the manufactory? | 5. The average rate of profits, since their establishment has been in operation, is seven per cent.                                                                                                                                                                                      |
| 6. How much of the capital is borrowed, and what interest is paid on it?                     | 6. 15,600 dollars has been borrowed at an interest of seven per cent., and the raw material has usually been purchased for cash, but sometimes on a credit of from four to six months.                                                                                                   |

| QUESTIONS.                                                                                                                                                             | ANSWERS.                                                                                                                                                                                                                                                                        |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7. What has been the rate of profits annually for the last three years? If a joint stock company, what dividends have been received?                                   | 7. No dividends have been received at any time.                                                                                                                                                                                                                                 |
| 8. What portion of the income of the company has been converted into fixed-capital, or retained for contingent or other objects, and, therefore, not annually divided? | 8. The whole of the income of the company has been retained in the business.                                                                                                                                                                                                    |
| 9. Causes of the increase (or decrease) of profit at different periods of time?                                                                                        | 9. The causes of decrease of profits have been the increased quantities of cloth manufactured, which have, at times, overstocked the market, the supply exceeding the demand.                                                                                                   |
| 10. Rates of profit on capital otherwise employed in the same county and State?                                                                                        | 10. Capital employed in other business yields from ten to fifteen per cent.                                                                                                                                                                                                     |
| 11. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                 | 11. 275,000 yards of shirting, of Nos. 17 and 18, value from 7 to 7½ cents per yard. 25,000 yards of sheeting, of Nos. 17 and 18, value from 8½ to 9 cents per yard.                                                                                                            |
| 12. Quality and value of raw materials annually used, distinguishing between foreign and domestic products?                                                            | 12. 75,000 pounds best New Orleans cotton, value at the mill 12½ cents per pound.                                                                                                                                                                                               |
| 13. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                        | 13. No similar articles of manufacture are imported from abroad.                                                                                                                                                                                                                |
| 14. Number of men, women, and children employed, and average wages of each class?                                                                                      | 14. Men, 15; average wages per week, \$6. Boys, 7; average wages per week, \$2. Females, 52, (including 24 weavers,) average wages per week, \$2 31. They board themselves at these prices, at the company's boarding house: men at \$1 25 per week, and women at \$1 per week. |
| 15. How many hours a day employed, and what portion of the year?                                                                                                       | 15. They are employed some seasons of the year over 12 hours per day, and some seasons under twelve hours, calculating to average twelve hours a day during the year.                                                                                                           |
| 16. Rate of wages of similar classes otherwise employed in the same State and county?                                                                                  | 16. The rates of wages for the same classes in the employ, would be less, by at least twenty per cent. The confinement of females so many hours in the day, renders them unwilling to engage in this business without more wages than they could make otherwise.                |
| 17. Number of horses or other animals employed?                                                                                                                        | 17. One span of horses and two yoke of oxen. The transportation is done by teamsters.                                                                                                                                                                                           |
| 18. Whether the manufactures find a vent at the manufactory? If not, how far they are sent to market?                                                                  | 18. The manufacturers do not find a vent at the manufactory, but are sent to New York to market 220 miles. A small part are exchanged at home for provisions, &c.                                                                                                               |
| 19. Whether foreign articles of the like kind enter into competition with them at such place of sale, and to what extent?                                              | 19. No foreign articles of the like kind enter into competition with them at New York.                                                                                                                                                                                          |
| 20. Where are the manufactures consumed?                                                                                                                               | 20. The greatest part of them are consumed in the country.                                                                                                                                                                                                                      |
| 21. Whether any of the manufactures are exported to foreign countries? If so, where?                                                                                   | 21. Do not know.                                                                                                                                                                                                                                                                |
| 22. Whether the manufacture is sold by the manufacturer for cash? If on credit, at what credit? If bartered, for what?                                                 | 22. The sales are made on a credit of from 6 to 8 months, except a small part: About one-twentieth part of the whole is sold at home, and bartered for agricultural productions.                                                                                                |

| QUESTIONS.                                                                                                                                                                                                                                                    | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>23. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?</p> | <p>23. The cost has decreased in consequence of improvements in machinery, and the wages are rather less than formerly, the whole making a difference of about two mills on the yard.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <p>24. The prices at which the manufacture has been sold by the manufacturer since the establishment?</p>                                                                                                                                                     | <p>24. In 1820 the manufacture sold for twelve and a half cents, and the price gradually declined until 1829, when it was for some time sold for less than the cost of the manufacture. Since then the price has advanced from one to two cents.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <p>25. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?</p>                                                                                                             | <p>25. Any alteration of the present rate of duties would be a dangerous experiment. It would be useless; for it is admitted, on all hands, that the price in market is as low as it can be made for. If the rate of duty is so reduced as to admit a similar article from abroad, the market will be immediately glutted, and goods will fall so that a great portion of the manufacturers will be ruined; and when so many shall have abandoned the business, that prices shall again become regular, they will be higher than they now are, as there will be less competition. Besides, the similar article made in England is not worth more than half as much as that made here: it is made of inferior cotton not worth more than half as much as that used here; and the value of the fabric for service will be nearly in proportion to the value of the cotton used.</p> |
| <p>26. Is any change necessary in levying or collecting duties on such articles to prevent fraud?</p>                                                                                                                                                         | <p>26. No change is necessary in levying or collecting duties to prevent fraud.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <p>27. What portion of the cost of your manufactures consists of the price of the raw material; what portion of the wages of labor; and what portion of the profits of capital?</p>                                                                           | <p>27. The price of a yard of shirting, at the present price of cotton, will consist of the raw material, - 3.00 cents.<br/>Wages of labor, - 3 00<br/>Profits of capital from - 1.00 to 1.05</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <p>28. What amount of the agricultural productions of the county is consumed in your establishment, and what amount of other domestic productions?</p>                                                                                                        | <p style="text-align: right;">7.00 to 7½</p> <p>From which is to be taken insurance at from 3 to 3½ per cent. premium.</p> <p>28. 5,000 pounds butter; 13,000 lbs. pork; 4,500 pounds beef and mutton; 1,500 pounds cheese; 400 bushels wheat; 500 bushels corn; 600 bushels rye; 360 gallons sperm oil; 1,000 dollars worth of iron, leather, lumber, coal, &amp;c.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <p>29. What quantity or amount of manufactures, such as you make, is produced in the United States, and what amount in this State?</p>                                                                                                                        | <p>29. Cannot state.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <p>30. If the duty upon the foreign manufacture of the kind of goods which you make, were reduced to 12½ per cent., would it cause you to abandon your business, or would you manufacture at reduced prices?</p>                                              | <p>30. If it were reduced to 12½ per cent., they might be obliged to discontinue their business; the supply would so far exceed the demand, that no market could be had for the article, and sales would, for one or two years, be made at less than cost.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <p>31. If it would cause you to abandon your business, in what way would you employ your capital?</p>                                                                                                                                                         | <p>31. If the business should be discontinued, or abandoned, the whole capital would be wholly lost.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| QUESTIONS.                                                                                                                                                                | ANSWERS.                                                                                                                                                              |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 32. Is there any pursuit in which you could engage, from which you could derive greater profits, even after a reduction of the import duties to 12½ per cent.?            | 32. They think there is; and that there would be scarcely any which would not be more profitable.                                                                     |
| 33. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent., and how gradual should the reduction be? | 33. Any reduction will be attended with such manifest risk to the whole capital employed in the cotton business, that Congress ought not to hazard the experiment.    |
| 34. Average profit of money or capital in your county?                                                                                                                    | 34. The legal rate of interest is seven per cent. The profits of capital, otherwise employed, yields from ten to fifteen per cent.                                    |
| 35. Average rate of wages in your county?                                                                                                                                 | 35. Female wages are from 75 to 87½ cents per week. Men laborers, on farms, receive from \$8 to \$10 per month; and mechanics from \$10 to \$15 per month, and board. |

COOPERSTOWN, March 14, 1832

ROBERT CAMPBELL.

Mr. Robert Campbell, who prepared the within statement, is president of the Otsego County Bank, a member of the bar of high reputation, and a man of the strictest honor and integrity. He is one of the proprietors of the Phoenix Factory, and has devoted part of a day every week to the supervision of its concerns. His statement of facts is entitled to entire credit. His opinions (as expressed in the within, and in the account of the Union, Hope, and Oakville factories, which he visited) will, of course, pass for so much as they shall be found to be worth. If he is mistaken in any thing, it is probably in his estimate of the profits of capital "otherwise" employed; and, from the common error of calculating the profits of a particular branch of business, without offsetting losses, and of adding to the real profits of small capitals the value of the services rendered by the individuals who manage them.

J. A. DIX.

## DOCUMENT 10.—No. 3.

*Hope Manufactory of Cotton Goods, situate in the town of Otsego, in the County of Otsego, in the State of New York, March, 1832.*

| QUESTIONS.                                                                                   | ANSWERS.                                                                                                                                                                                                                                          |
|----------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. By what power—water, steam, or what other?                                                | 1. By water power.                                                                                                                                                                                                                                |
| 2. When established; and whether a joint stock concern?                                      | 2. Is a partnership, and not a joint stock concern. Established in 1820.                                                                                                                                                                          |
| 3. Capital invested in ground and buildings, water power and machinery?                      | 3. In July, 1820, the establishment, which had been erected in 1814, passed into the hands of the present proprietors for the sum of \$42,000; since which they have expended in grounds, new erections, and machinery, \$38,000. Total \$80,000. |
| 4. Average amount in materials, in cash for the purchase of materials, and payment of wages? | 4. \$19,000.                                                                                                                                                                                                                                      |
| 5. Annual rate of profit on the capital invested since the establishment of the manufactory? | 5. The annual rate of profit has been seven per cent.                                                                                                                                                                                             |

DOCUMENT 10.—No. 5—Continued.

| QUESTIONS.                                                                                                                                                           | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 6. How much of the capital is borrowed, and what interest is paid on it?                                                                                             | 6. None.                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 7. What has been the rate of profits annually for the last three years? If a joint stock company, what dividends have been received?                                 | 7. The rate of profits for the last three years has been seven per cent.                                                                                                                                                                                                                                                                                                                                                     |
| 8. What portion of the income of the company has been converted into fixed capital, or retained for contingent or other objects, and therefore not annually divided? | 8. None.                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 9. Causes of the increase (or decrease) of profit at different periods of time?                                                                                      | 9. Different prices of cotton, and at times the manufacturing of more goods than were required to supply the demand, have caused a decrease of profits.                                                                                                                                                                                                                                                                      |
| 10. Rates of profit on capital otherwise employed in the same county and State?                                                                                      | 10. Capital otherwise employed yields from ten to fifteen per cent., except on loans of money, which yields seven per cent.                                                                                                                                                                                                                                                                                                  |
| 11. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                               | 11. For the last four years, they have manufactured yearly \$430,000 yards of brown shirtings and sheetings, 3-55ths thereof being sheetings, and the residue shirtings of Nos. 17 and 18; the value of shirtings from 7 to 7½ cents per yard, and sheetings 9 cents, deducting freight, commissions on sales, &c. Previous to that time, they manufactured on an average 300,000 yards yearly of the same quality of goods. |
| 12. Quantity and value of raw materials annually used, distinguishing between foreign and domestic products?                                                         | 12. 104,000 lbs. of the best Alabama and New Orleans cotton, value at the mill for the last year 12½ cents per lb.                                                                                                                                                                                                                                                                                                           |
| 13. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                      | 13. Do not know that any similar article is imported from abroad into the United States.                                                                                                                                                                                                                                                                                                                                     |
| 14. Number of men, women, and children employed, and average wages of each class?                                                                                    | 14. Males, most of them men, 18, whose average wages per week amounts to .6. Females (including 27 weavers) 82, whose average wages per week amounts to \$2 30. They are boarded at the company's boarding house, for which the men pay \$1 25 per week, and the women pay 1 dollar per week.                                                                                                                                |
| 15. How many hours a day employed, and what portion of the year?                                                                                                     | 15. They calculate to employ the hands 12 hours a day during the year; a part of the time exceeding 12 hours, a part of the time less than 12; so as to average 12 hours throughout the year.                                                                                                                                                                                                                                |
| 16. Rate of wages of similar classes otherwise employed in the same State and county?                                                                                | 16. The rate of wages of similar classes otherwise employed in the same State and county, would be twenty per cent. less, more especially the females.                                                                                                                                                                                                                                                                       |
| 17. Number of horses or other animals employed?                                                                                                                      | 17. They keep two horses and one yoke of oxen; their transportation is done wholly by persons employed as teamsters.                                                                                                                                                                                                                                                                                                         |
| 18. Whether the manufactures find a vent at the manufactory? If not, how far they are sent to a market?                                                              | 18. About 1-20th part of the goods are sold at the manufactory; the residue are sent to New York and Albany for a market, but principally to New York. Distance from Albany 70 miles; from New York 220 miles.                                                                                                                                                                                                               |
| 19. Whether foreign articles of the like kind enter into competition with them at such place of sale? If so, to what extent?                                         | 19. They do not. No articles of the like kind, of foreign manufacture, are imported into the United States.                                                                                                                                                                                                                                                                                                                  |

| QUESTIONS.                                                                                                                                                                                                                                             | ANSWERS.                                                                                                                                                                                                                                                                                      |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 20. Where are the manufactures consumed?                                                                                                                                                                                                               | 20. Cannot state where consumed.                                                                                                                                                                                                                                                              |
| 21. Whether any of the manufactures are exported to foreign countries? If so, where?                                                                                                                                                                   | 21. They have no knowledge on this subject.                                                                                                                                                                                                                                                   |
| 22. Whether the manufacture is sold by the manufacturer for cash? If on credit, at what credit? If bartered, for what?                                                                                                                                 | 22. They are sold generally on a credit of from six to eight months, without interest. A small quantity at home are bartered for agricultural productions.                                                                                                                                    |
| 23. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 23. The cost has rather decreased; when the price of cotton was the same, partly in consequence of improvements in machinery, and partly from the reduction of the wages of the hands employed. This decrease is however but small.                                                           |
| 24. The prices at which the manufacture has been sold by the manufacturer since the establishment?                                                                                                                                                     | 24. The brown shirtings were sold in 1890 for 12½ cents per yard; they declined in price gradually until 1829, when they had reached 6½ cents; since which the price has increased in market.                                                                                                 |
| 25. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                             | 25. Any alteration of the present rate of duties would be hazardous to the persons employed in the cotton business. The rate of duties should be so high as to exclude the coarse fabrics (such as they make) entirely.                                                                       |
| 26. Is any change necessary in levying or collecting duties on such articles to prevent fraud?                                                                                                                                                         | 26. Do not know any thing about it.                                                                                                                                                                                                                                                           |
| 27. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                           | 27. The price of a yard of shirting, at the present price of cotton, would be composed of the raw material 3 cents, wages of labor 3 cents; and whatever would remain after paying insurance, which amounts to three and three and a half per cent. premium, would be the profits of capital. |
| 28. What amount of the agricultural productions of the county is consumed in your establishment, and what amount of other domestic productions?                                                                                                        | 28. They consume yearly 5,500 lbs. butter, 15,000 lbs. pork, 5,000 lbs. beef and mutton, 2,000 lbs. cheese, 500 bshls wheat, 500 bshls. corn, 500 bshls. rye, 620 cords wood, 300 galls. winter strained sperm. oil, and 1000 dolls. worth of iron, leather, lumber, coal, &c.                |
| 29. What quantity or amount of manufactures, such as you make, is produced in the United States, and what amount in this State?                                                                                                                        | 29. Cannot state.                                                                                                                                                                                                                                                                             |
| 30. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., would it cause you to abandon your business, or would you manufacture at reduced prices?                                               | 30. Could not manufacture at reduced prices; a reduction of the duties would first affect those engaged in the finer fabrics, and drive them upon coarse goods; an over supply would be the immediate effect.                                                                                 |
| 31. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                         | 31. The capital invested in buildings and machinery would be entirely lost.                                                                                                                                                                                                                   |
| 32. Is there any pursuit in which you could engage, from which you could derive greater profits, even after a reduction of the import duties to 12½ per cent?                                                                                          | 32. Yes. Any other pursuit would, in their opinion, yield greater profits.                                                                                                                                                                                                                    |
| 33. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of six per cent., and how gradual should the reduction be?                                                                            | 33. Any reduction would, in their opinion, be attended with great risk. It would probably destroy a great part of the manufacturers.                                                                                                                                                          |

## DOCUMENT 10.—No. 5.—Continued.

| QUESTIONS.                                             | ANSWERS.                                                                                                                                                                                                      |
|--------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 34. Average profit of money or capital in your county? | 34. The profit of money is 7 per cent. interest. Capital employed in mercantile, or other mechanical pursuits, will yield from 10 to 15 per cent.                                                             |
| 35. Average rate of wages in your county?              | 35. Female wages are from 75 to 87½ cts per week, and boarded. Men laborers on farms receive about ten dollars per month, and boarded. Mechanics receive from ten to fourteen dollars per month, and boarded. |

Coopers town, March 10, 1832.

ROBT CAMPBELL.

## DOCUMENT 10.—No. 6.

*The Oakville Manufactory of Cotton Goods, situate in the town of Otsego, in the County of Otsego, in the State of New York, March, 1832.*

| QUESTIONS.                                                                                                                                                           | ANSWERS.                                                                                                                                                                                                                     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. By what power—water, steam, or what other?                                                                                                                        | 1. By water power.                                                                                                                                                                                                           |
| 2. When established; and whether a joint stock concern?                                                                                                              | 2. Is the sole property of Col. Russel Williams, and was established by him in 1832.                                                                                                                                         |
| 3. Capital invested in ground and buildings, water power and machinery?                                                                                              | 3. Fifty thousand dollars.                                                                                                                                                                                                   |
| 4. Average amount in materials, in cash for the purchase of materials, and payment of wages?                                                                         | 4. Fifteen thousand dollars. It is however to be remarked, that when the contemplated enlargement of his business takes place in the spring, this sum will be greatly increased.                                             |
| 5. Annual rate of profit on the capital invested since the establishment of the manufactory?                                                                         | 5. Is not able to answer this question with much accuracy. All his business is superintended by himself, and all the profits of the establishment, as well as of his other business, have been carried into the manufactory. |
| 6. How much of the capital is borrowed, and what interest is paid on it?                                                                                             | 6. He has not borrowed any capital, but has usually bought the raw material for carrying on his business upon a credit of from four to six months. The last year he purchased for cash.                                      |
| 7. What has been the rate of profits annually, for the last three years? If a joint stock company, what dividends have been received?                                | 7. The profits on the capital invested have not exceeded seven per cent.                                                                                                                                                     |
| 8. What portion of the income of the company has been converted into fixed capital, or retained for contingent or other objects, and therefore not annually divided? | 8. The whole of the profits have been retained in the business.                                                                                                                                                              |
| 9. Causes of the increase (or decrease) of profits at different periods of time?                                                                                     | 9. The causes of the decrease of profits are the competition among the home manufacturers, and the excess of supply beyond the demand.                                                                                       |

DOCUMENT 10.—No. 6—Continued.

| QUESTIONS.                                                                                                                             | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|----------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10. Rates of profit on capital otherwise employed in the same county and State?                                                        | 10. Capital employed in mercantile or mechanical operations yields from ten to fifteen per cent. profit.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 11. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 11. For the last three years, he has annually manufactured from 250,000 to 260,000 yard of cloth, from No. 20 to No. 26, which have been converted principally into blue calicoes of the value of 12 cents per yard; a very small part have been printed other colors, of rather less value than blues. Before that time, the quantity of yards manufactured did not exceed 150,000. He has made arrangements for increasing the printing business the ensuing year to 30,000 yards per week, or about 1,500,000 yards a year.                                                                                                      |
| 12. Quantity and value of raw materials annually used, distinguishing between foreign and domestic products?                           | 12. Fifty thousand pounds cotton, value of 45 cents per pound; 2,850 lbs indigo, value \$1 60 per lb.; 8,550 lbs. copperas, value 24 cents per lb.; \$30 worth of lime; \$100 worth of blue vitriol; \$70 worth of sugar of lead; \$900 worth of potash; \$200 worth of oil of vitriol; \$50 worth of starch gum; \$20 worth of flour; \$60 worth of blanketing for printing; \$900 worth of bleaching salts; all of which are domestic products, except the indigo, which is Bengal. 300 cards of wood are also used in the printing business, worth \$1 per card; and \$25 worth of doctors (knives used for cleaning cylinders.) |
| 13. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                        | 13. He has not seen, nor does he know, that any calicoes of the kind manufactured by him, have been lately imported. The cheap calicoes formerly imported from Great Britain were entirely different from the goods manufactured by him.                                                                                                                                                                                                                                                                                                                                                                                            |
| 14. Number of men, women, and children employed, and average wages of each class?                                                      | 14. Men 16, whose average wages amount to \$5 70 per week; boys 8, av. \$1 75; females 52, incl. 20 weavers, av. \$2 25. At these prices they board themselves, the price of which for men is \$1 25, boys and women \$1 per week. The number of men and amount of wages will be much increased by the increase of business in the calico mill.                                                                                                                                                                                                                                                                                     |
| 15. How many hours a day employed, and what portion of the year?                                                                       | 15. A part of the year they work more than twelve hours a day, and a part of the year less than twelve, making through the year an average of twelve hours a day.                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 16. Rate of wages of similar classes otherwise employed in the same State and county?                                                  | 16. Is at least twenty per cent. less than what they receive in this business.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 17. Number of horses or other animals employed?                                                                                        | 17. Two span of horses and one yoke of oxen.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 18. Whether the manufactures find a vent at the manufactory? If not, how far they are sent to a market?                                | 18. The principal part of the goods are sent to New York for a market, 220 miles distance; about 1-15th is sold at home, and bartered for provisions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 19. Whether foreign articles of the like kind enter into competition with them at such place of sale, and to what extent?              | 19. Few, if any, foreign articles of the kind manufactured by him, are to be found in the market: the finer qualities of goods have to compete with the British calicoes in the New York market.                                                                                                                                                                                                                                                                                                                                                                                                                                    |

December 10, N. 6—Continued.

## QUESTIONS.

## ANSWERS.

20. Where are the manufactures consumed?

20. Consumed by the working classes, and principally in the country.

21. Whether any of the manufactures are exported to foreign countries? If so, where?

21. Cannot say.

22. Whether the manufacture is sold by the manufacturer for cash? If on credit, at what credit? If bartered, for what?

22. Sold on a credit of six months; small quantities at the manufactory are bartered for agricultural productions.

23. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?

23. It has decreased a little, from improvements in machinery, and increased skill in the manufacturers. The decrease has been about two mills on the yard.

24. The prices at which the manufacture has been sold by the manufacturer since the establishment?

24. When the manufactory was first established, the goods sold at 16 cents per yard, and the price has gradually declined yearly to the present time, when they are worth 12 cents. The decrease in price is attributed to the increased quantity manufactured in the country, and the competition among those engaged in the business.

25. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?

25. The same rate that is now established. Any alteration, he thinks, would ruin the calico printers.

26. Is any change necessary in levying or collecting duties on such articles to prevent fraud?

26. Can give no information on the subject.

27. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?

27. The cost of a yard of calico, at the present prices of the raw material, would consist nearly of the following proportions: raw material 3-5, labor 4-5=10 cents; leaving for profits of capital and insurance two cents. The rates of insurance are from three to three and a half per cent. premium.

28. What amount of the agricultural productions of the county is consumed in your establishment, and what amount of other domestic productions?

28. 4,000 lbs. butter; 1,500 lbs. cheese; 12,000 lbs. pork; 4,000 lbs. beef and mutton; 400 bush. wheat; 500 bush. corn; 600 bush. rye; 900 cords wood; 350 gals. sperma. oil; \$800 worth of iron, leather, lumber, coal, &c.

29. What quantity or amount of manufactures, such as you make, is produced in the United States, and what amount in this State?

29. Cannot answer.

30. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent, would it cause you to abandon your business, or would you manufacture at reduced prices?

30. It would cause him to abandon his business; he could not manufacture calicoes at reduced prices.

31. If it would cause you to abandon your business, in what way would you employ your capital?

31. It would be a total loss of the buildings and machinery, and he would have but little capital left to employ in any business.

32. Is there any pursuit in which you could engage, from which you could derive greater profits, even after a reduction of the import duties to 12½ per cent?

32. But he is confident that there is scarcely any other business which would not yield a greater profit than calico printing, if the duties were reduced to 12½ per cent.

33. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent, and how gradual should the reduction be?

33. Any reduction would ruin the calico printers, and would break down a great proportion of the cloth manufacturers.

| QUESTIONS.                                             | ANSWERS.                                                                                                                                                                                                                                                                                                                                 |
|--------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 34. Average profit of money or capital in your county? | 34. The legal rate of interest is seven per cent. The profit of capital employed in mercantile and mechanical business is from 10 to 15 per cent.                                                                                                                                                                                        |
| 35. Average rate of wages in your county?              | 35. The wages of females are seventy-five cents per week, besides boarding; but if those now engaged in the factories were thrown out of employ, wages would probably be reduced below that sum. The wages of labor in farming are from 8 to \$9 per mo. besides boarding. Mechanics get about one dollar per day, and board themselves. |

Coopersstown, March 13, 1832.

ROBT. CAMPBELL.

## DOCUMENT 10.—No. 7.

*The Union Cotton Manufactory, situate in the town of Hartwick, in the County of Otsego, in the State of New York, March, 1832.*

| QUESTIONS.                                                                                                                                                           | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                 |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. By what power—water, steam, or what other?                                                                                                                        | 1. By water power.                                                                                                                                                                                                                                                                                                                                                       |
| 2. When established, and whether a joint stock concern?                                                                                                              | 2. A joint stock concern, established in 1809.                                                                                                                                                                                                                                                                                                                           |
| 3. Capital invested in ground and buildings, water power and machinery?                                                                                              | 3. In 1809, the capital invested was \$22,500, and was gradually increased by the profits until 1820, when it amounted to \$40,000; since which time there has been invested in buildings, new erections, and machinery, \$30,000: making now the sum of \$70,000.                                                                                                       |
| 4. Average amount in materials, in cash for the purchase of materials, and payment of wages?                                                                         | 4. Twenty thousand dollars.                                                                                                                                                                                                                                                                                                                                              |
| 5. Annual rate of profit on the capital invested since the establishment of the manufactory?                                                                         | 5. No dividends were declared before 1820. Since then, the average rate of profits have been seven per cent.                                                                                                                                                                                                                                                             |
| 6. How much of the capital is borrowed, and what interest is paid on it?                                                                                             | 6. None.                                                                                                                                                                                                                                                                                                                                                                 |
| 7. What has been the rate of profits annually for the last three years? If a joint stock company, what dividends have been received?                                 | 7. The dividends for the last three years ending April, 1831, have been six per cent. on the average; that is, eighteen per cent. during the three years. Last year seven per cent. was divided; and a bad debt of several years' standing was last year secured and collected, to the amount of nearly \$7,000, and an extra dividend of seven per cent. paid thereout. |
| 8. What portion of the income of the company has been converted into fixed capital, or retained for contingent or other objects, and therefore not annually divided? | 8. None.                                                                                                                                                                                                                                                                                                                                                                 |

| QUESTIONS.                                                                                                                                                                                                                                             | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 8. Causes of the increase (or decrease) of profit at different periods of time?                                                                                                                                                                        | 9. The causes of the increase or decrease of profits are partly the different prices of cotton, but principally the glutting the market at times, so that the supply exceeded the demand.                                                                                                                                                                                                                                                                       |
| 10. Rates of profit on capital otherwise employed in the same county and State?                                                                                                                                                                        | 10. Capital employed in other business yields from ten to fifteen per cent.                                                                                                                                                                                                                                                                                                                                                                                     |
| 11. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                 | 11. The average amount of goods heretofore has been about 300,000 annually: taking the last three years, the average is 315,154 yards shirting, of No. 16 and 17 yarn, worth $7\frac{1}{2}$ cents; and 48,115 yards sheeting, of No. 16 and 17 yarn, worth $9\frac{1}{2}$ cents: the last year, however, exceeding the two former years. From the quantity of machinery in operation, they can now manufacture from 475,000 to 500,000 yards shirting annually. |
| 12. Quantity and value of raw materials annually used, distinguishing between foreign and domestic products?                                                                                                                                           | 12. Heretofore they have used about 80,000 pounds of best New Orleans cotton, worth, at the mill, $12\frac{1}{2}$ cents per pound; but are now using 120,000 pounds of the same quality of cotton.                                                                                                                                                                                                                                                              |
| 13. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                        | 13. No similar article imported into the United States of America.                                                                                                                                                                                                                                                                                                                                                                                              |
| 14. Number of men, women, and children, employed, and average wages of each class?                                                                                                                                                                     | 14. Seventeen men, whose average wages per day amount to \$1 02<br>Sixty-one women, do do 26<br>Thirty children, do do 20                                                                                                                                                                                                                                                                                                                                       |
| 15. How many hours a day employed, and what portion of the year?                                                                                                                                                                                       | 15. Averaging the whole time twelve hours a day: some part of the year somewhat less, and a part somewhat more.                                                                                                                                                                                                                                                                                                                                                 |
| 16. Rate of wages of similar classes otherwise employed in the same State and county?                                                                                                                                                                  | 16. The rate of wages would be less in other employ.                                                                                                                                                                                                                                                                                                                                                                                                            |
| 17. Number of horses or other animals employed?                                                                                                                                                                                                        | 17. Seven horses and two yoke of oxen.                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 18. Whether the manufactures find a vent at the manufactory? If not, how far they are sent to a market?                                                                                                                                                | 18. The goods are sent principally to New York, 220 miles; a small part, say one-twentieth of the whole, are sold at home, and bartered for agricultural productions.                                                                                                                                                                                                                                                                                           |
| 19. Whether foreign articles of the like kind enter into competition with them at such place of sale, and to what extent?                                                                                                                              | 19. There are no foreign articles of the like kind imported.                                                                                                                                                                                                                                                                                                                                                                                                    |
| 20. Where are the manufactures consumed?                                                                                                                                                                                                               | 20. The greatest part are consumed in the country.                                                                                                                                                                                                                                                                                                                                                                                                              |
| 21. Whether any of the manufactures are exported to foreign countries? If so, where?                                                                                                                                                                   | 21. They do not know.                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 22. Whether the manufacture is sold by the manufacturer for cash? If on credit, at what credit? If bartered, for what?                                                                                                                                 | 22. The sales are made on six to eight months' credit, except about one-twentieth part of the whole, which are sold at home, and bartered for agricultural productions.                                                                                                                                                                                                                                                                                         |
| 23. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 23. The cost has decreased a little by improvements in machinery, and wages a trifle less than heretofore, making a difference of from two to three mills the yard. This is to be understood of their business since 1820, when the power-loom was first introduced into their mill.                                                                                                                                                                            |

## QUESTIONS.

24. The prices at which the manufacture has been sold by the manufacturer since the establishment?

25. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?

26. Is any change necessary in levying or collecting duties on such articles to prevent fraud?

27. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?

28. What amount of the agricultural productions of the county is consumed in your establishment, and what amount of other domestic productions?

29. What quantity or amount of manufactures, such as you make, is produced in the United States, and what amount in this State?

30. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., would it cause you to abandon your business, or would you manufacture at reduced prices?

31. If it would cause you to abandon your business, in what way would you employ your capital?

32. Is there any pursuit in which you could engage, from which you could derive greater profits, even after a reduction of the import duties to 12½ per cent.?

33. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent., and how gradual should the reduction be?

34. Average profit of money or capital in your county?

35. Average rate of wages in your county?

## ANSWERS.

24. In 1820 shirtings sold at 12½ cents per yard, and the price gradually fell until 1829, when it sold for less than cost; the net proceeds of sales being under six cents; since then the price has improved.

25. Any alteration which would admit the coarse fabrics from abroad would be ruinous to a great number of those employed in the cotton business, and without any possible benefit to the consumer or to the country.

26. No change is necessary.

27. A yard of shirting at the present price of cotton will consist nearly as follows: raw material 3 cents, wages of labor 3 cents, profits of capital 1½ cent; price of a yard of shirting 7½ cents: from this however is to be taken insurance, for which a premium of three per cent. has been paid.

28. 1,000 bushels wheat, 600 bushels rye, 300 bushels corn, 500 oats, 20,000 lbs. pork, 4,500 lbs. butter, 2,000 lbs. cheese, 8,000 lbs. beef and mutton, 600 bushels potatoes, 800 lbs. tallow candles, 500 gallons sperm oil, \$1,300 in lumber, leather, coal, iron, &c.

29. Cannot state.

30. They could not manufacture at reduced prices. The market would at once be overstocked, and all would have to sell at a loss. A great number would have to stop. They would probably continue the business, in expectation that prices would eventually be better, as the domestic competition became less.

31. There is no way in which the capital invested in buildings and machinery could be employed. It would, as respects that, be a total loss.

32. They think any other business would be better after such reduction.

33. Any reduction would be a dangerous experiment. It would probably ruin nine-tenths of the manufacturers.

34. The legal rate of interest is seven per cent. Capital employed in mercantile and in other mechanical pursuits yields from ten to fifteen per cent.

35. Female wages are seventy-five cents per week; men, as laborers on farms, receive from eight to ten dollars per month; mechanics from ten to fourteen dollars per month.

## DOCUMENT 10.—No. 8.

*Manufacture of Cotton, situate in the town of Butternuts, in the County of Otsego, in the State of New York, March, 1832.*

| QUESTIONS.                                                                                                                                                           | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. By what power—water, steam, or what other?                                                                                                                        | 1. Water power.                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 2. When established; and whether a joint stock concern?                                                                                                              | 2. In the year 1812; and is a joint stock.                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 3. Capital invested in ground and buildings, water power and machinery?                                                                                              | 3. Capital paid \$45,000.                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 4. Average amount in materials, in cash for the purchase of materials, and payment of wages?                                                                         | 4. \$35,000.                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 6. How much of the capital is borrowed, and what interest is paid on it?                                                                                             | 6. Nothing borrowed.                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 7. What has been the rate of profits annually for the last three years. If a joint stock company, what dividends have been received?                                 | 7. About 12 per cent. dividend.                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 8. What portion of the income of the company has been converted into fixed capital, or retained for contingent or other objects, and therefore not annually divided? | 8. The capital has increased, from the \$45,000 paid in, to \$74,000, being \$29,000 invested in buildings and machinery, &c.                                                                                                                                                                                                                                                                                                                              |
| 9. Causes of the increase (or decrease) of profit at different periods of time.                                                                                      | 9. Many and various causes: the different prices at which the raw material has been sold, as also the manufactured goods, together with the difference of cost of manufacturing at different periods. Since the powerloom has come into use, the cost is much less than before. For many years, we paid from 6d to 12d for weaving goods made from yarn Nos. 16, 17 and 18; we now pay upon the power loom 66 cents per hundred yards, being 30. per yard. |
| 11. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                               | 11. 525,000 yards brown goods, 28 inches wide—worth, at this time, 8½ cents.                                                                                                                                                                                                                                                                                                                                                                               |
| 12. Quantity and value of raw materials annually used, distinguishing between foreign and domestic products?                                                         | 12. 135,000 lbs. cotton, say 12 cents; 400 gallons sperm oil, 80 cents; 60 barrels flour, for starch, \$5; 30 sides belt leather, \$3.                                                                                                                                                                                                                                                                                                                     |
| 13. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                      | 13. Unknown.                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 14. Number of men, women and children employed, and average wages of each class?                                                                                     | 14. About 90 in all.                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 15. How many hours a day employed, and what portion of the year?                                                                                                     | 15. From 20th September to 20th March, from sunrise to 8 o'clock P. M.; and from 20th March to 20th September, from sunrise to sunset.                                                                                                                                                                                                                                                                                                                     |
| 16. Rate of wages of similar classes otherwise employed in the same State and county?                                                                                | 16. No material difference, except the small or young help, who could not find employment in any other department.                                                                                                                                                                                                                                                                                                                                         |
| 17. Number of horses or other animals employed?                                                                                                                      | 17. 16 horses are constantly employed in teaming.                                                                                                                                                                                                                                                                                                                                                                                                          |
| 18. Whether the manufactures find a vent at the manufactory? If not, how far they are sent to a market?                                                              | 18. Four-fifths are sent to New York and Albany—from 90 to 230 miles distant.                                                                                                                                                                                                                                                                                                                                                                              |
| 20. Where are the manufactures consumed?                                                                                                                             | 20. I conclude that a great proportion are consumed in the United States.                                                                                                                                                                                                                                                                                                                                                                                  |

| QUESTIONS.                                                                                                                                                                                                                                             | ANSWERS.                                                                                                                                                                                                                                                                                                                                 |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 21. Whether any of the manufactures are exported to foreign countries? If so, where?                                                                                                                                                                   | 21. A part of our goods have found a market in South America.                                                                                                                                                                                                                                                                            |
| 22. Whether the manufacture is sold by the manufacturer for cash? If on credit, at what credit? If bartered, for what?                                                                                                                                 | 22. Sold for cash, or a credit from six to eight months.                                                                                                                                                                                                                                                                                 |
| 23. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 23, 24. Our goods have sold as high as 28 cents per yard, and they have sold as low as 6 cents per yard: I have purchased cotton at 30 cents, and as low as 9 cents per pound. No material difference in labor as to price. We manufacture the same quantity of goods now, which we have heretofore done, for about one-third the labor. |
| 24. The prices at which the manufacture has been sold by the manufacturer since the establishment?                                                                                                                                                     | 25. At the present rate of duty, the manufacturer can make, by industry and economy, a fair business, and nothing more—the hand labor receiving a fair compensation.                                                                                                                                                                     |
| 25. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                             | 26. I know of none, not being sufficiently acquainted with the mode of such collections.                                                                                                                                                                                                                                                 |
| 26. Is any change necessary in levying or collecting duties on such articles to prevent fraud?                                                                                                                                                         | 27. There has been periods when the raw material and labor entirely excluded all profit; and it, at all times, depends upon the price of goods and the raw material—the state of the market. The last three years the profits have been about twelve per cent. per annum.                                                                |
| 27. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                           | 28. 2,400 bushels grain; 400 cords wood; 100 barrels pork; 15,000 lbs. beef, with potatoes, beans, peas, &c. &c.                                                                                                                                                                                                                         |
| 28. What amount of the agricultural productions of the county is consumed in your establishment, and what amount of other domestic productions?                                                                                                        | 29. I have heretofore handed a statement to the members of the New York Convention. I observe that they report the whole amount in the United States at \$26,000,000.                                                                                                                                                                    |
| 29. What quantity or amount of manufactures, such as you make, is produced in the United States, and what amount in this State?                                                                                                                        | 30. I know not what I should be induced to do. I know that I have manufactured at a loss, hoping for better times; but if the case should become hopeless, I should choose to abandon the business.                                                                                                                                      |
| 30. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., would it cause you to abandon your business, or would you manufacture at reduced prices?                                               | 31. Nine tenths of the capital would be entirely lost. Lost! Buildings and machinery, and the value in real estate, would be almost useless, as it is impossible to convert it into any other channel.                                                                                                                                   |
| 31. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                         | 32. I would endeavor to render my situation more tolerable, if possible, in some other business.                                                                                                                                                                                                                                         |
| 32. Is there any pursuit in which you could engage, from which you could derive greater profits, even after a reduction of the import duties to 12½ per cent.?                                                                                         | 33. I know not. I am of the opinion that many locations would yield 6 per cent., whilst a very great proportion of our manufacturing establishments would make nothing, owing to the very great difference in the expense of living at the various sections of our country.                                                              |
| 33. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent., and how gradual should the reduction be?                                                                              |                                                                                                                                                                                                                                                                                                                                          |

## DOCUMENT 10.—No. 8—Continued.

| QUESTIONS.                                             | ANSWERS.                                                                                                                                                                                                 |
|--------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 34. Average profit of money or capital in your county? | 34. In all business operations, it depends much upon the location, and the skill of those who manage. Merchandise, in this section, is perhaps equal to 14 per cent.; agriculture, from 4 to 6 per cent. |
| 35. Average rate of wages in your county?              | 35. Young men, laborers, get about \$10 per month.                                                                                                                                                       |

A. G. WASHBON.

March 19, 1831.

Mr. Washbon is a very respectable man, and is considered to have managed this establishment, of which he is a large joint proprietor, with uncommon skill and prudence.

J. A. DIX.

## DOCUMENT 10.—No. 9.

*Manufactory of Cotton, situate in the town of Brownville, in the County of Jefferson, in the State of New York, March, 1832.—Furnished by Proprietors.*

| QUESTIONS.                                                                                                                                                           | ANSWERS.                                                                                                  |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------|
| 1. By what power—water, steam, or what other?                                                                                                                        | 1. Water power.                                                                                           |
| 2. When established; and whether a joint stock concern?                                                                                                              | 2. Joint stock concern; established in 1814; a total failure; re-established in 1826.                     |
| 3. Capital invested in ground and buildings, water power and machinery?                                                                                              | 3. About fifty thousand dollars.                                                                          |
| 4. Average amount in materials, in cash for the purchase of materials, and payment of wages?                                                                         | 4. From eighteen to twenty thousand dollars.                                                              |
| 5. Annual rate of profit on the capital invested since the establishment of the manufactory?                                                                         | 5. There has been but little profit realized.                                                             |
| 6. How much of the capital is borrowed, and what interest is paid on it?                                                                                             | 6. Three thousand dollars, at 7 per cent.                                                                 |
| 7. What has been the rate of profits annually for the last three years: if a joint stock company, what dividends have been received?                                 | 7. No dividend.                                                                                           |
| 8. What portion of the income of the company has been converted into fixed capital, or retained for contingent or other objects, and therefore not annually divided? | 8. The whole.                                                                                             |
| 9. Causes of the increase (or decrease) of profit at different periods of time?                                                                                      | 9. Occasional stagnation of business.                                                                     |
| 10. Rates of profit on capital otherwise employed in the same county and State?                                                                                      | 10. We know of very little business that would justify the borrowing money at the legal rate of interest. |
| 11. Amount of articles annually manufactured since the establishment of the manufactory? Description; quality, and value of each kind?                               | 11. Between two and three hundred thousand yards of sheeting and shirtings, worth from 8 to 10½ cents.    |

| QUESTIONS.                                                                                                                                                                                                                                             | ANSWERS.                                                                                                          |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------|
| 12. Quantity and value of raw materials annually used, distinguishing between foreign and domestic products?                                                                                                                                           | 12. About eleven thousand dollars, principally domestic.                                                          |
| 14. Number of men, women and children employed, and average wages of each class?                                                                                                                                                                       | 14. About 90; average of men's about \$1 per day; do. women do. \$2 per week; do. children do. 1 to \$2 per week. |
| 15. How many hours a day employed, and what portion of the year?                                                                                                                                                                                       | 15. Average 12 hours per day.                                                                                     |
| 16. Rate of wages of similar classes otherwise employed in the same State and county?                                                                                                                                                                  | 16. Mechanics about the same; women and children less than one-third.                                             |
| 17. Number of horses or other animals employed?                                                                                                                                                                                                        | 17. Average of twelve.                                                                                            |
| 18. Whether the manufactures find a vent at the manufactory? If not, how far they are sent to a market?                                                                                                                                                | 18. About one-sixth at the factory; remainder sent to New York.                                                   |
| 20. Where are the manufactures consumed?                                                                                                                                                                                                               | 20. Principally in the United States.                                                                             |
| 21. Whether any of the manufactures are exported to foreign countries? If so, where?                                                                                                                                                                   | 21. A portion are understood to be exported.                                                                      |
| 22. Whether the manufacture is sold by manufacturer for cash? If on credit, at what credit? If bartered, for what?                                                                                                                                     | 22. Usually from 6 to 8 months.                                                                                   |
| 23. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 23. No essential variation.                                                                                       |
| 24. The prices at which the manufacture has been sold by the manufacturer since the establishment?                                                                                                                                                     | 24. In 1828, '29, and '30, we suspended business: prices would not pay cost of production.                        |
| 27. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                           | 27. Raw material about 3-8, labor, &c., more than 4-8, profits less than 1-8.                                     |
| 28. What amount of the agricultural productions of the county is consumed in your establishment, and what amount of other domestic productions?                                                                                                        | 28. Productions of the county about five thousand dollars.                                                        |
| 30. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., would it cause you to abandon your business, or would you manufacture at reduced prices?                                               | 30. It would probably compel us to abandon the business.                                                          |
| 31. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                         | 31. The capital being invested in buildings and machinery, would be unavailable for other purposes.               |
| 32. Is there any pursuit in which you could engage, from which you could derive greater profits, even after a reduction of the import duties to 12½ per cent.?                                                                                         | 32. Most other kinds of business.                                                                                 |
| 33. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent., and how gradual should the reduction be?                                                                              | 33. The business will not bear any reduction of duties, as the revenue laws are now enforced.                     |
| 34. Average profit of money or capital in your county?                                                                                                                                                                                                 | 34. Can't tell.                                                                                                   |
| 35. Average rate of wages in your county?                                                                                                                                                                                                              | 35. About \$18 per month.                                                                                         |

## DOCUMENT 10.—No. 10.

*The Jefferson Cotton Mills, situate in the town of Watertown, in the County of Jefferson, in the State of New York, March, 1832.*

| QUESTIONS.                                                                                                                                                           | ANSWERS.                                                                                                                        |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------|
| 1. By what power—water, steam, or what other?                                                                                                                        | 1. By water power.                                                                                                              |
| 2. When established; and whether a joint stock concern?                                                                                                              | 2. A joint stock concern; commenced in 1827.                                                                                    |
| 3. Capital invested in ground and buildings, water power and machinery?                                                                                              | 3. About one hundred thousand dollars.                                                                                          |
| 4. Average amount in materials, in cash for the purchase of materials, and payment of wages?                                                                         | 4. About forty thousand dollars annually.                                                                                       |
| 5. Annual rate of profit on the capital invested since the establishment of the manufactory?                                                                         | 5. There has been but little profit realized thus far, the establishment being new, and gradually getting into operation.       |
| 7. What has been the rate of profits annually for the last three years:—if a joint stock company, what dividends have been received?                                 | 7. Profits very small, and no dividends made.                                                                                   |
| 8. What portion of the income of the company has been converted into fixed capital, or retained for contingent or other objects, and therefore not annually divided? | 8. The whole.                                                                                                                   |
| 9. Causes of the increase (or decrease) of profit at different periods of time?                                                                                      | 9. Excessive importations, frauds on the revenue, and occasional stagnation of business.                                        |
| 10. Rates of profit on capital otherwise employed in the same county and State?                                                                                      | 10. Such as would justify very few people in borrowing money at six per cent.                                                   |
| 11. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                               | 11. Varying in amount every year. During the last year about 600,000 yards of shirtings and sheetings, worth 8 and 10½ cents.   |
| 12. Quantity and value of raw materials annually used, distinguishing between foreign and domestic products?                                                         | 12. About \$20,000 annually; chiefly of American products.                                                                      |
| 13. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                      | 13. Better answered in the sea-ports.                                                                                           |
| 14. Number of men, women and children employed, and average wages of each class?                                                                                     | 14. About 180 persons. Average of men's wages about \$1 per day; women's do. \$2 25 per week; children's do. 1 to \$2 per week. |
| 15. How many hours a day employed, and what portion of the year?                                                                                                     | 15. Average 12 hours per day.                                                                                                   |
| 16. Rates of wages of similar classes otherwise employed in the same State and county?                                                                               | 16. Men about three-fourths of the above rate; women and children not one-third.                                                |
| 17. Number of horses or other animals employed?                                                                                                                      | 17. An average of about twenty horses.                                                                                          |
| 18. Whether the manufactures find a vent at the manufactory? If not, how far they are sent to a market?                                                              | 18. About one-fifth at the manufactory; the residue are sent to New York and Albany, principally to New York.                   |
| 19. Whether foreign articles of the like kind enter into competition with them at such place of sale; if so, to what extent?                                         | 19. It is believed that they do.                                                                                                |
| 20. Where are the manufactures consumed?                                                                                                                             | 20. Chiefly in the United States.                                                                                               |
| 21. Whether any of the manufactures are exported to foreign countries? If so, where?                                                                                 | 21. A portion is exported to South America and elsewhere.                                                                       |
| 22. Whether the manufacture is sold by the manufacturer for cash? If, on credit, at what credit? If bartered, for what?                                              | 22. Usually at four, six, and eight months.                                                                                     |

| QUESTIONS.                                                                                                                                                                                                                                             | ANSWERS.                                                                                                                                                                                                                                                |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 23. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 23. No material difference.                                                                                                                                                                                                                             |
| 24. The prices at which the manufacture has been sold by the manufacturer since the establishment?                                                                                                                                                     | 24. In 1829 and 1830, at 7 and 9 cents—a ruinous business.                                                                                                                                                                                              |
| 25. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                             | 25 and 26. Refer to manufacturers more familiar with the revenue laws.<br>We are of opinion, that the substitution of ad valorem for minimum duties would greatly facilitate the evasion of the revenue laws, and increase the frauds upon the revenue. |
| 26. Is any change necessary in levying or collecting duties on such articles to prevent fraud?                                                                                                                                                         | 27. Raw material about $\frac{1}{2}$ ; labor about $\frac{1}{2}$ ; profits, without reference to wear and tear, insurance, &c., about $\frac{1}{2}$ .                                                                                                   |
| 27. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                           | 28. Of agricultural productions of this county, not less than \$10,000; of other domestic productions, about 15,000 to \$18,000.                                                                                                                        |
| 28. What amount of the agricultural productions of the county is consumed in your establishment, and what amount of other domestic productions?                                                                                                        | 30. It would probably compel an abandonment.                                                                                                                                                                                                            |
| 30. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12 $\frac{1}{2}$ per cent, would it cause you to abandon your business, or would you manufacture at reduced prices?                                   | 31. The capital being invested in buildings and machinery, would be nearly a total loss, and unavailable for other purposes.<br>32. Almost any other business.                                                                                          |
| 31. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                         | 33. We find that, under the existing duties, as the revenue laws are now enforced, the profits of our business are less than the legal interest of the capital employed.                                                                                |
| 32. Is there any pursuit in which you could engage, from which you could derive greater profits, even after a reduction of the import duties to 12 $\frac{1}{2}$ per cent.?                                                                            | 34. Hard to tell.                                                                                                                                                                                                                                       |
| 33. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent., and how gradual should the reduction be?                                                                              |                                                                                                                                                                                                                                                         |
| 34. Average profit of money or capital in your county?                                                                                                                                                                                                 |                                                                                                                                                                                                                                                         |

WATERTOWN, JEFFERSON COUNTY, NEW YORK, March 12, 1832.

LEVI BEEBEE & Co.

Mr. Beebee is well known in this State as an enterprising, intelligent, and honorable man; worthy, in all respects, of entire confidence.

J. A. DIX.

DOCUMENT 10.—No. 11.

*Manufacture of the Farmers and Mechanics' Manufacturing Company, situate in the town of New Berlin, in the County of Chenango, in the State of New York, March, 1832.*

| QUESTIONS.                                                                                                                                                                                                            | ANSWERS.                                                                                                                                                                                                                    |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. By what power—water, steam, or what other?                                                                                                                                                                         | 1. Water power.                                                                                                                                                                                                             |
| 2. When established; and whether a joint stock concern?                                                                                                                                                               | 2. 1812, and joint stock.                                                                                                                                                                                                   |
| 3. Capital invested in ground and buildings, water power and machinery?                                                                                                                                               | 3. About \$70,000.                                                                                                                                                                                                          |
| 4. Average amount in materials, in cash for the purchase of materials, and payment of wages?                                                                                                                          | 4. The whole nearly \$50,000.                                                                                                                                                                                               |
| 6. How much of the capital is borrowed, and what interest is paid on it?                                                                                                                                              | 6. None.                                                                                                                                                                                                                    |
| 7. What has been the rate of profits annually for the last three years: if a joint stock company, what dividends have been received?                                                                                  | 7. Average about 7 per cent. per annum.                                                                                                                                                                                     |
| 9. Causes of the increase (or decrease) of profit at different periods of time?                                                                                                                                       | 9. Rise of cotton and fall of goods is enough.                                                                                                                                                                              |
| 12. Quantity and value of raw materials annually used, distinguishing between foreign and domestic products?                                                                                                          | 12. Made an estimate of amount of cotton used in one-third of the year 1831, and the proportion for this would produce an annual consumption of some 240,000 pounds, which, at its present value, would be nearly \$30,000. |
| 14. Number of men, women and children employed, and average wages of each class?                                                                                                                                      | 14. About 150 hands.                                                                                                                                                                                                        |
| 15. How many hours a day employed, and what portion of the year?                                                                                                                                                      | 15. About 12 hours on an average for the year.                                                                                                                                                                              |
| 17. Number of horses or other animals employed?                                                                                                                                                                       | 17. Seven to eight horses.                                                                                                                                                                                                  |
| 18. Whether the manufactures find a vent at the manufactory? If not, how far they are sent to a market?                                                                                                               | 18. Mostly sent to New York.                                                                                                                                                                                                |
| 22. Whether the manufacture is sold by the manufacturer for cash? If on credit, at what credit? If bartered, for what?                                                                                                | 22. Generally at six to eight months' credit.                                                                                                                                                                               |
| 24. The prices at which the manufacture has been sold by the manufacturer since the establishment?                                                                                                                    | 24. Brown $\frac{3}{4}$ shirtings have varied from 36 cents down to 6 cents per yard.                                                                                                                                       |
| 25. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                            | 25. The present rate, at least.                                                                                                                                                                                             |
| 28. What amount of the agricultural productions of the county is consumed in your establishment, and what amount of other domestic productions?                                                                       | 28. 1,000 bushels of wheat, 4,000 bushels of coarse grain, 25 to 30,000 pounds pork, besides beef, butter, cheese, &c., 1,000 cords of wood.                                                                                |
| 30. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12 $\frac{1}{2}$ per cent., would it cause you to abandon your business, or would you manufacture at reduced prices? | 30. Should conceive that such a reduction would enable foreigners to glut the market at such prices as would force us to abandon business.                                                                                  |
| 31. If it would cause you to abandon your business, in what way you would employ your capital?                                                                                                                        | 31. The capital of the company, \$75,000, would, in fact, be almost entirely invested in machinery and fast property, to the amount of the above \$70,000, and, therefore, would cause entire destruction.                  |

| QUESTIONS.                                                                                                                                                     | ANSWERS.                                                                                                    |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------|
| 32. Is there any pursuit in which you could engage, from which you could derive greater profits, even after a reduction of the import duties to 12½ per cent.? | 32. In case of such reduction, and consequent prostration of business, we should have no capital to invest. |
| 34. Average profit of money or capital in your county?                                                                                                         | 34. Probably seven to ten per cent.                                                                         |

I think the answers to the above queries are substantially correct.

JOSEPH MOSS, *Agent*.

Mr. Moss is a highly respectable man, and the establishment under his care is considered remarkably well managed.

J. A. DIX.

## DOCUMENT 10.—No. 12.

*Manufactory of Reed & Watson, situate in the town of Livingston, in the County of Columbia, in the State of New York, March, 1832.—Furnished by the proprietors.*

| QUESTIONS.                                                                                                                                                           | ANSWERS.                                                                                                                                                    |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. By what power—water, steam, or what other?                                                                                                                        | 1. Water.                                                                                                                                                   |
| 2. When established; and whether a joint stock concern?                                                                                                              | 2. Established in 1828, and a joint stock concern.                                                                                                          |
| 3. Capital invested in ground and buildings, water power and machinery?                                                                                              | 3. Eighteen thousand dollars.                                                                                                                               |
| 4. Average amount in materials, in cash for the purchase of materials, and payment of wages?                                                                         | 4. Two hundred and sixty-five dollars per week.                                                                                                             |
| 5. Annual rate of profit on the capital invested since the establishment of the manufactory?                                                                         | 5. Ten per cent.                                                                                                                                            |
| 6. How much of the capital is borrowed, and what interest is paid on it?                                                                                             | 6. Seven thousand dollars borrowed, at seven per cent.                                                                                                      |
| 7. What has been the rate of profits annually for the last three years: if a joint stock company, what dividends have been received?                                 | 7. Average ten per cent.; no dividends.                                                                                                                     |
| 8. What portion of the income of the company has been converted into fixed capital, or retained for contingent or other objects, and therefore not annually divided? | 8. All in fixed capital.                                                                                                                                    |
| 9. Causes of the increase (or decrease) of profit at different periods of time?                                                                                      | 9. Don't know.                                                                                                                                              |
| 10. Rates of profit on capital otherwise employed in the same county and State?                                                                                      | 10. None otherwise employed.                                                                                                                                |
| 11. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                               | 11. Eighty-eight thousand four hundred pounds of cotton yarn and cotton batts; yarn from 5 to 10, value from 16 to 23 cts.; batts, value from 7 to 9 cents. |
| 12. Quantity and value of raw materials annually used, distinguishing between foreign and domestic products?                                                         | 12. One hundred and four thousand pounds of cotton. No foreign articles.                                                                                    |

| QUESTIONS.                                                                                                                                                                                                                                             | ANSWERS.                                                                                                                                                                                                                                                                                                                      |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 13. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                        | 13. Don't know.                                                                                                                                                                                                                                                                                                               |
| 14. Number of men, women and children employed, and average wages of each class?                                                                                                                                                                       | 14. Three men at 7s. per day, eleven women at 13s. per week, seventeen children at 9s. per week.                                                                                                                                                                                                                              |
| 15. How many hours a day employed, and what portion of the year?                                                                                                                                                                                       | 15. Twelve hours per day the whole year.                                                                                                                                                                                                                                                                                      |
| 16. Rate of wages of similar classes otherwise employed in the same State and county?                                                                                                                                                                  | 16. Men 5s. per day, women 6s. per week, children very few otherwise employed.                                                                                                                                                                                                                                                |
| 17. Number of horses or other animals employed?                                                                                                                                                                                                        | 17. Two horses.                                                                                                                                                                                                                                                                                                               |
| 18. Whether the manufactures find a vent at the manufactory? If not, how far they are sent to a market?                                                                                                                                                | 18. Sent to New York.                                                                                                                                                                                                                                                                                                         |
| 19. Whether foreign articles of the like kind enter into competition with them at such place of sale? And to what extent?                                                                                                                              | 19. Don't know.                                                                                                                                                                                                                                                                                                               |
| 20. Where are the manufactures consumed?                                                                                                                                                                                                               | 20. All over the country.                                                                                                                                                                                                                                                                                                     |
| 21. Whether any of the manufactures are exported to foreign countries? If so, where?                                                                                                                                                                   | 21. Don't know of any.                                                                                                                                                                                                                                                                                                        |
| 22. Whether the manufacture is sold by the manufacturer for cash? If on credit, at what credit? If bartered, for what?                                                                                                                                 | 22. Sold for cash, and four months' credit.                                                                                                                                                                                                                                                                                   |
| 23. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 23. The cost of the article has varied, both increasing and decreasing. Don't know how much in each year.                                                                                                                                                                                                                     |
| 24. The prices at which the manufacture has been sold by the manufacturer since the establishment?                                                                                                                                                     | 24. Cotton batts from 7 to 9 cents; cotton yarn from 16 to 23 cents.                                                                                                                                                                                                                                                          |
| 25. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                             | 25. Same we have now.                                                                                                                                                                                                                                                                                                         |
| 26. Is any change necessary in levying or collecting duties on such articles to prevent fraud?                                                                                                                                                         | 26. None.                                                                                                                                                                                                                                                                                                                     |
| 27. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                           | 27. Raw material 11-17, wages 5-17, capital 1-17.                                                                                                                                                                                                                                                                             |
| 28. What amount of the agricultural productions of the county is consumed in your establishment, and what amount of other domestic productions?                                                                                                        | 28. Agricultural productions of the county \$1,000 per year, other domestic productions \$1,000 per year.                                                                                                                                                                                                                     |
| 29. What quantity or amount of manufactures, such as you make, is produced in the United States, and what amount in this State?                                                                                                                        | 29. Don't know.                                                                                                                                                                                                                                                                                                               |
| 30. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., would it cause you to abandon your business, or would you manufacture at reduced prices?                                               | 30. There is no duty upon articles of this kind, but if the present protecting duties were reduced to 12½ per cent., it would cause other manufacturers to stop their looms and engage in the manufacture of this kind of goods, and thereby destroy the business; and we should abandon our machinery, &c., as a total loss. |

| QUESTIONS.                                                                                                                                                                | ANSWERS.            |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|
| 31. If it would cause you to abandon your business, in what way would you employ your capital?                                                                            | 31. Don't know.     |
| 32. Is there any pursuit in which you could engage, from which you could derive greater profits, even after a reduction of the import duties to 12½ per cent.?            | 32. Yes.            |
| 33. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent., and how gradual should the reduction be? | 33. Don't know.     |
| 34. Average profit of money or capital in your county?                                                                                                                    | 34. Seven per cent. |
| 35. Average rate of wages in your county?                                                                                                                                 | 35. Don't know.     |

## DOCUMENT 10.—No. 13.

*Cotton Manufactory of James Wild, situate in the town of Hudson, in the County of Columbia, in the State of New York, March, 1832.—Furnished by the Proprietor.*

| QUESTIONS.                                                                                                                                                           | ANSWERS.                                                                                                                                                                                                                 |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. By what power—water, steam, or what other?                                                                                                                        | 1. By water power.                                                                                                                                                                                                       |
| 2. When established; and whether a joint stock concern?                                                                                                              | 2. Established in 1824–5. Owned by the late firm of James Wild & Co.; now in the possession of James Wild, and worked on his account.                                                                                    |
| 3. Capital invested in ground and buildings, water power and machinery?                                                                                              | 3. About \$40,000.                                                                                                                                                                                                       |
| 4. Average amount in materials, in cash for the purchase of materials, and payment of wages?                                                                         | 4. About \$40,000.                                                                                                                                                                                                       |
| 5. Annual rate of profit on the capital invested since the establishment of the manufactory?                                                                         | 5. There has been no dividend since the factory was erected. The profits will not pay the less by floods and breaking up of ice, and depreciation in consequence of improvements in machinery made since this was built. |
| 6. How much of the capital is borrowed, and what interest is paid on it?                                                                                             | 6. None.                                                                                                                                                                                                                 |
| 7. What has been the rate of profits annually for the last three years? If a joint stock company, what dividends have been received?                                 | 7. There have been no dividends.                                                                                                                                                                                         |
| 8. What portion of the income of the company has been converted into fixed capital, or retained for contingent or other objects, and therefore not annually divided? | 8. There has been nothing to divide, nor any portion added to the fixed capital.                                                                                                                                         |
| 9. Causes of the increase (or decrease) of profit at different periods of time?                                                                                      | 9. The cloth made at this factory is fine yard wide shirting. In 1826 it brought 28 cents per yard; it has brought less every year since: it is not down to 15½ cents.                                                   |

DOCUMENT 10.—No. 13—Continued.

| QUESTIONS.                                                                                                                                                                                                                                             | ANSWERS.                                                                                                                                                                                                          |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10. Rates of profit on capital otherwise employed in the same county and State?                                                                                                                                                                        | 10. Do not know.                                                                                                                                                                                                  |
| 11. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                 | 11. About 8,000 pieces fine shirtings, of 33 yards each.                                                                                                                                                          |
| 12. Quantity and value of raw materials annually used, distinguishing between foreign and domestic products?                                                                                                                                           | 12. Answered in question No. 4.                                                                                                                                                                                   |
| 13. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                        | 13. Don't know.                                                                                                                                                                                                   |
| 14. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                      | 14. 17 men, average \$7 50; 52 women, average \$2 50; 12 girls, average \$2 00; 36 boys and girls from 10 to 15, average \$1 75.                                                                                  |
| 15. How many hours a day employed, and what portion of the year?                                                                                                                                                                                       | 15. Twelve hours in summer, 10½ hours in winter.                                                                                                                                                                  |
| 16. Rate of wages of similar classes otherwise employed in the same State and county?                                                                                                                                                                  | 16. Don't know.                                                                                                                                                                                                   |
| 17. Number of horses and other animals employed?                                                                                                                                                                                                       | 17. Two horses and one yoke of oxen.                                                                                                                                                                              |
| 18. Whether the manufactures find a vent at the manufactory? If not, how far they are sent to a market?                                                                                                                                                | 18. Cloth is sold in New York and Philadelphia.                                                                                                                                                                   |
| 19. Whether foreign articles of the like kind enter into competition with them at such place of sale, and to what extent?                                                                                                                              | 19. They do, to a considerable extent.                                                                                                                                                                            |
| 20. Where are the manufactures consumed?                                                                                                                                                                                                               | 20. Principally in the United States.                                                                                                                                                                             |
| 21. Whether any of the manufactures are exported to foreign countries? If so, where?                                                                                                                                                                   | 21. I have been told by my agents that they have made a few sales to go to S. America.                                                                                                                            |
| 22. Whether the manufacture is sold by the manufacturer for cash? If on credit, at what credit? If bartered, for what?                                                                                                                                 | 22. My goods are sold by commission merchants in New York and Philadelphia, on a credit of six and eight months.                                                                                                  |
| 23. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 23. The cost at this factory has varied with price of cotton. Those factories that have taken out their old machinery, and have introduced the most modern, produce their goods from 6 to 10 per cent. less cost. |
| 24. The prices at which the manufacture has been sold by the manufacturer since the establishment?                                                                                                                                                     | 24. From 28 cents in 1826, down to 15½ in 1832.                                                                                                                                                                   |
| 25. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                             | 25. Not less than the present rate.                                                                                                                                                                               |
| 26. Is any change necessary in levying or collecting duties on such articles to prevent fraud?                                                                                                                                                         | 26. The duty would be better protection if it was levied in cash.                                                                                                                                                 |
| 27. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                           | 27. About ¼ in cotton, ½ in wages, ¼ in oil, coal, wood, leather, &c., and ¼ wear and tear. No profits at the present price of fine cloth.                                                                        |
| 28. What amount of the agricultural productions of the county is consumed in your establishment, and what amount of other domestic productions?                                                                                                        | 28. There are about 370 persons depend on the factory for support. The provisions consumed are mostly raised in the county, with the exception of groceries.                                                      |

| QUESTIONS.                                                                                                                                                                                               | ANSWERS.                                                                                                                                                        |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 29. What quantity or amount of manufactures, such as you make, is produced in the United States, and what amount in this State?                                                                          | 29 I do not know.                                                                                                                                               |
| 30. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., would it cause you to abandon your business, or would you manufacture at reduced prices? | 30. If the duty was reduced to 12½ per cent. I should have to stop, and sacrifice the property.                                                                 |
| 31. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                           | 31. I do not know.                                                                                                                                              |
| 32. Is there any pursuit in which you could engage, from which you could derive greater profits, even after a reduction of the import duties to 12½ per cent.?                                           | 32. I am not acquainted with any other business.                                                                                                                |
| 33. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of six per cent., and how gradual should the reduction be?                              | 33. At the present duty, I cannot make six per cent., allowing for wear and tear, and keeping up with the improvements that are constantly making in machinery. |
| 34. Average profit of money or capital in your county?                                                                                                                                                   | 34. Interest of money is seven per cent.                                                                                                                        |
| 35. Average rate of wages in your county?                                                                                                                                                                | 35. Average rate of wages in this county from 75 cents to \$1 50.                                                                                               |

## DOCUMENT 10.—No. 14.

*Cotton Manufactory of the Columbia Manufacturing Society, situate in the town of Stuyvesant, in the County of Columbia, in the State of New York, March, 1832.—Answers furnished by the agent of the Society.*

| QUESTIONS.                                                                                                                                                           | ANSWERS.                                                         |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------|
| 1. By what power—water, steam, or what other?                                                                                                                        | 1. Water.                                                        |
| 2. When established; and whether a joint stock concern?                                                                                                              | 2. Chartered in 1809. Capital \$200,000. Amount paid \$160,000.  |
| 3. Capital invested in ground and buildings, water power and machinery?                                                                                              | 3. Capital invested \$160,000.                                   |
| 4. Average amount in materials, in cash for the purchase of materials, and payment of wages?                                                                         | 4. About 30,000.                                                 |
| 5. Annual rate of profit on the capital invested since the establishment of the manufactory?                                                                         | 5. The amount of capital invested has not netted seven per cent. |
| 6. How much of the capital is borrowed, and what interest is paid on it?                                                                                             | 6. None.                                                         |
| 7. What has been the rate of profits annually for the last three years? If a joint stock company, what dividends have been received?                                 | 7. Answered in No. 5.                                            |
| 8. What portion of the income of the company has been converted into fixed capital, or retained for contingent or other objects, and therefore not annually divided? | 8. Probably one-half.                                            |

## DOCUMENT 10.—No. 14—Continued.

| QUESTIONS.                                                                                                                                                                                                                                             | ANSWERS.                                                                                                                                                                         |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 9. Causes of the increase (or decrease) of profit at different periods of time?                                                                                                                                                                        | 9. The article made is fine sheeting, 4-4 wide. In 1826 it sold at 28 cents per yard; it has declined gradually to the present time, and is now worth 15½ cents per yard.        |
| 10. Rates of profit on capital otherwise employed in the same county and State?                                                                                                                                                                        | 10. Cannot say.                                                                                                                                                                  |
| 11. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                 | 11. About 6,000 pieces, of 33 yards each.                                                                                                                                        |
| 12. Quantity and value of raw materials annually used, distinguishing between foreign and domestic products?                                                                                                                                           | 12. Answered in No. 4.                                                                                                                                                           |
| 13. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                        | 13. Do not know.                                                                                                                                                                 |
| 14. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                      | 14. Twelve men, average \$7.50 per week; thirty-three women, average \$2.50 per week; eight girls, \$2 per week; 24 boys and girls, from 9 to 16, average about \$1.75 per week. |
| 15. How many hours a day employed, and what portion of the year?                                                                                                                                                                                       | 15. Twelve hours in summer; 10½ hours in winter.                                                                                                                                 |
| 16. Rate of wages of similar classes otherwise employed in the same State and county?                                                                                                                                                                  | 16. Cannot say.                                                                                                                                                                  |
| 17. Number of horses or other animals employed?                                                                                                                                                                                                        | 17. Three horses.                                                                                                                                                                |
| 18. Whether the manufactures find a vent at the manufactory? If not, how far they are sent to a market?                                                                                                                                                | 18. Sold in New York and Philadelphia.                                                                                                                                           |
| 19. Whether foreign articles of the like kind enter into competition with them at such place of sale, and to what extent?                                                                                                                              | 19. They do to some extent.                                                                                                                                                      |
| 20. Where are the manufactures consumed?                                                                                                                                                                                                               | 20. Principally in the United States.                                                                                                                                            |
| 21. Whether any of the manufactures are exported to foreign countries? If so, where?                                                                                                                                                                   | 21. Have been informed that small shipments have been made to South America.                                                                                                     |
| 22. Whether the manufacture is sold by the manufacturer for cash? If on credit, at what credit? If bartered, for what?                                                                                                                                 | 22. The goods are sold by commission merchants in New York and Philadelphia on a credit of six to eight months.                                                                  |
| 23. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 23. The cost of the article now varies with the price of cotton.                                                                                                                 |
| 24. The prices at which the manufacture has been sold by the manufacturer since the establishment?                                                                                                                                                     | 24. From 28 cents in 1826, to 15½ cents in 1832.                                                                                                                                 |
| 25. What rate of duty is necessary to enable the manufacturer to enter into competition, in the home market, with similar articles imported?                                                                                                           | 25. Should think not less than the present duty.                                                                                                                                 |
| 27. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                           | 27. About ¼ in cotton, ½ in wages, ¼ in oil, coal, wood, &c., ¼ wear and tear. No profit at the present price of cloth.                                                          |
| 28. What amount of the agricultural productions of the county is consumed in your establishment, and what amount of other domestic productions?                                                                                                        | 28. There are about 250 persons dependent upon the establishment for their support. The provisions are principally raised in the county, with the exception of tea, coffee, &c.  |

| QUESTIONS.                                                                                                                                                                                                | ANSWERS.                                                                                                                       |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------|
| 29. What quantity or amount of manufactures, such as you make, is produced in the United States, and what amount in this State?                                                                           | 29. Cannot say.                                                                                                                |
| 30. If the duty upon the foreign manufacture of the kind of goods which you make, were reduced to 12½ per cent., would it cause you to abandon your business, or would you manufacture at reduced prices? | 30. If the duty should be reduced to 12½ per cent., should think the foreign article would drive the home one from the market. |
| 31. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                            | 31. Do not know.                                                                                                               |
| 32. Is there any pursuit in which you could engage, from which you could derive greater profits, even after a reduction of the import duties to 12½ per cent.?                                            | 32. Should think there was.                                                                                                    |
| 34. Average profit of money or capital in your county?                                                                                                                                                    | 34. Cannot say.                                                                                                                |
| 35. Average rate of wages in your county?                                                                                                                                                                 | 35. Wages from 75 cents to \$1.50 per day.                                                                                     |

## DOCUMENT 10.—No. 15.

*Manufactory of Joseph and Benjamin Marshall, situate in the City of Hudson, in the County of Columbia, in the State of New York, March, 1832.—Furnished by the Proprietors.*

| QUESTIONS.                                                                                                                                                             | ANSWERS.                                                                                                                                                       |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. By what power—water, steam, or what other?                                                                                                                          | 1. Water.                                                                                                                                                      |
| 2. When established; and whether a joint stock concern?                                                                                                                | 2. Established five years. Private property.                                                                                                                   |
| 3. Capital invested in ground and building, water power, and machinery?                                                                                                | 3. Three hundred thousand dollars.                                                                                                                             |
| 5. Annual rate of profit on the capital invested since the establishment of the manufactory?                                                                           | 5. No profit, having had two fires and one flood, which took off the whole of the profits.                                                                     |
| 6. How much of the capital is borrowed, and what interest is paid on it?                                                                                               | 6. None.                                                                                                                                                       |
| 7. What has been the rate of profits annually for the last three years? If a joint stock company, what dividends have been received?                                   | 7. None.                                                                                                                                                       |
| 8. What portion of the income of the company has been converted into fixed capital, or retained for contingent or other objects, and, therefore, not annually divided? | 8. None divided.                                                                                                                                               |
| 11. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                 | 11. One hundred and fifty thousand pieces of calicoes per annum, 30 yards each, and value four dollars each upon an average.                                   |
| 14. Number of men, women, and children employed, and average wages of each class?                                                                                      | 14. One hundred men, at six dollars per week. One hundred women and boys, at two and a half dollars per week. Fifty men, at seven and a half dollars per week. |

## DOCUMENT 10.—No. 15—Continued.

| QUESTIONS.                                                                                                                                                                                                | ANSWERS.                                                                                                                                                                              |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 15. How many hours a day employed, and what portion of the year?                                                                                                                                          | 15. In summer, from seven in the morning until twelve at noon, and from one until six in the evening. In winter, from half past seven until twelve, and from one until five at night. |
| 17. Number of horses or other animals employed?                                                                                                                                                           | 17. Fourteen horses and six oxen.                                                                                                                                                     |
| 18. Whether the manufactures find a vent at the manufactory? If not, how far they are sent to a market?                                                                                                   | 18. In New York.                                                                                                                                                                      |
| 19. Whether foreign articles of the like kind enter into competition with them at such place of sale?                                                                                                     | 19. Those from England.                                                                                                                                                               |
| 20. Where are the manufactures consumed?                                                                                                                                                                  | 20. All over the States.                                                                                                                                                              |
| 21. Whether any of the manufactures are exported to foreign countries? If so, where?                                                                                                                      | 21. None.                                                                                                                                                                             |
| 22. Whether the manufacture is sold by the manufacturer for cash? If on credit, at what credit? If bartered, for what?                                                                                    | 23. Sold at six months, and some few at eight months. Cash.                                                                                                                           |
| 24. The prices at which the manufacture has been sold by the manufacturer since the establishment?                                                                                                        | 24. Twenty per cent. higher five years since.                                                                                                                                         |
| 25. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                | 25. The same as we now have.                                                                                                                                                          |
| 26. Is any change necessary in levying or collecting duties on such articles to prevent fraud?                                                                                                            | 26. None.                                                                                                                                                                             |
| 27. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                              | 27. 5-8th cloth; 2-8th labor; 1-8th drugs.                                                                                                                                            |
| 28. What amount of the agricultural productions of the county is consumed in your establishment, and what amount of other domestic productions?                                                           | 28. Fuel, \$12,000 per annum; flour, 100 barrels; starch from flour and potatoes, 200 barrels; bran, 5,000 bushels; drugs made in the county, \$20,000.                               |
| 29. What quantity or amount of manufactures, such as you make, is produced in the United States, and what amount in this State?                                                                           | 29. Cannot answer.                                                                                                                                                                    |
| 30. If the duty upon the foreign manufacture of the kind of goods which you make, were reduced to 12½ per cent., would it cause you to abandon your business, or would you manufacture at reduced prices? | 30. Must give up the concern, as wages in England are one-half less, except wages could be reduced here to the same as in England.                                                    |
| 31. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                            | 31. Abandon the concern, and lose our capital.                                                                                                                                        |
| 33. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent., and how gradual should the reduction be?                                 | 33. It does not yet yield six per cent. per annum profit.                                                                                                                             |
| 34. Average profit of money or capital in your county?                                                                                                                                                    | 34. Six per cent.                                                                                                                                                                     |
| 35. Average rate of wages in your county?                                                                                                                                                                 | 35. Seventy-five cents per day.                                                                                                                                                       |

## DOCUMENT 10.—No. 16.

*Manufactory of Cotton Goods, situate in the town of Sangerfield, in the County of Oneida, in the State of New York, March, 1832.—Furnished by the Agent.*

| QUESTIONS.                                                                                                                                                           | ANSWERS.                                                                                                                                                                                                                     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. By what power—water, steam, or what other?                                                                                                                        | 1. Water power alone.                                                                                                                                                                                                        |
| 2. When established; and whether a joint stock concern?                                                                                                              | 2. This is an incorporate company, established in 1814.                                                                                                                                                                      |
| 3. Capital invested in ground and buildings, water power and machinery?                                                                                              | 3. There has been invested since the establishment was incorporated, in 1814, say forty thousand dollars.                                                                                                                    |
| 6. How much of the capital is borrowed, and what interest is paid on it?                                                                                             | 6. Two thousand dollars, paying an interest of seven per cent.                                                                                                                                                               |
| 7. What has been the rate of profits annually for the last three years? If a joint stock company, what dividends have been received?                                 | 7. We have not declared any dividend for the last three years. The net profits of the establishment for the last three years have been not more than nine per cent. on the forty thousand dollars invested.                  |
| 8. What portion of the income of the company has been converted into fixed capital, or retained for contingent or other objects, and therefore not annually divided? | 8. The whole income of the company for the last three years have been applied to pay for machinery, and for cotton and manufactured goods on hand.                                                                           |
| 9. Causes of the increase (or decrease) of profit at different periods of time?                                                                                      | 9. We obtain labor for a much less price than previous to 1828, and the improvement in machinery enables us to manufacture at less prices.                                                                                   |
| 10. Rates of profit on capital otherwise employed in the same county and State?                                                                                      | 10. We hardly know of any business in this county that pays a less profit on the investment, where the same economy is pursued, than that of manufacturing cotton goods for the last three years.                            |
| 11. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                               | 11. It is impossible for us to give any statement of the proceedings of this company previous to 1828, the establishment having changed hands in 1828. The original stockholders suffering 75 per cent. on their investment. |
| 12. Quantity and value of raw materials annually used, distinguishing between foreign and domestic products?                                                         | 12. We have used annually for the last three years, say 50,000 lbs. of cotton, at an average cost of 1½ cents, \$6,250; 300 galls. of oil at 8 shillings, \$300; and wood, glue, &c., worth \$200.                           |
| 14. Number of men, women, and children, employed, and average wages of each class?                                                                                   | 14. Five men, the average wages \$1 per day; and about forty females and boys, at an average price of \$1 50 per week, they boarding themselves.                                                                             |
| 15. How many hours a day employed, and what portion of the year?                                                                                                     | 15. We work 12 hours in the day, and 310 days in the year. We generally have three holidays.                                                                                                                                 |
| 16. Rate of wages of similar classes otherwise employed in the same State and county?                                                                                | 16. The men obtain one-fourth more wages, generally, and the other hands one-half more, than an average of wages at any other business that they could get employment at.                                                    |
| 17. Number of horses or other animals employed?                                                                                                                      | 17. We pay for freight and transportation, annually, \$400 at least, either by canal or wagons.                                                                                                                              |
| 18. Whether the manufactures find a vent at the manufactory? If not, how far they are sent to a market?                                                              | 18. Three-fourths of our goods are sold in the city of New York; the balance sold at the mill.                                                                                                                               |

## DOCUMENT 10.—No. 16—Continued.

| QUESTIONS.                                                                                                                                                                                               | ANSWERS.                                                                                                                                                                                                                    |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 22. Whether the manufacture is sold by the manufacturer for cash? If on credit, at what credit? If bartered, for what?                                                                                   | 22. The goods sold in New York are sold on a credit of six and eight months.                                                                                                                                                |
| 24. The prices at which the manufacture has been sold by the manufacturer since the establishment?                                                                                                       | 24. Our average sales for the last three years have been at about 7½ cents per yard.                                                                                                                                        |
| 27. What portion of the cost of your manufacture consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                              | 27. The costs of raw material, say 3 cents per yard; labor and contingent expenses, 3 cents.                                                                                                                                |
| 28. What amount of the agricultural productions of the county is consumed in your establishment, and what amount of other domestic productions?                                                          | 28. Nearly seven-eighths of the amount of labor is paid in the common products of the county—flour, pork, corn, beef, &c.; what is not paid of the seven-eighths in provisions, is paid mostly in domestic wearing apparel. |
| 30. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., would it cause you to abandon your business, or would you manufacture at reduced prices? | 30. Our business would not pay a fair profit with a reduction: still we might continue to manufacture, until our machinery wore out.                                                                                        |
| 31. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                           | 31. Should we be compelled to stop manufacturing, we could not convert our property into available funds, without incurring a loss of 75 cents on the dollar.                                                               |
| 34. Average profit of money or capital in your county?                                                                                                                                                   | 34. Seven per cent.                                                                                                                                                                                                         |
| 35. Average rate of wages in your county?                                                                                                                                                                | 35. Good able-bodied young men's wages are \$10 per month for eight months in twelve; but children's wages are not worth anything, but to make cotton goods.                                                                |

## DOCUMENT 10.—No. 17.

*Manufactory of Oneida Manufacturing Society, situate in the town of Whites town, in the County of Oneida, in the State of New York, March, 1832.*

| QUESTIONS.                                                                                   | ANSWERS.                                                                                                                                                                                                                                                                    |
|----------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. By what power—water, steam, or what other?                                                | 1. Water is the principal power, but steam is used to assist when there is not a sufficiency of water.                                                                                                                                                                      |
| 2. When established; and whether a joint stock concern?                                      | 2. Established in 1809. Destroyed by fire in 1829. Rebuilt in 1829 and 1830. A joint stock concern.                                                                                                                                                                         |
| 3. Capital invested in ground and buildings, water power and machinery?                      | 3. About one hundred thousand dollars.                                                                                                                                                                                                                                      |
| 5. Annual rate of profit on the capital invested since the establishment of the manufactory? | 5. The dividends since 1815 to the present time, have not amounted to more than five per cent. on the amount of capital stock. If we include the loss by fire in 1829, it will not amount to more than three per cent. per annum from the establishment of the manufactory. |

## QUESTIONS.

6. How much of the capital is borrowed, and what interest is paid on it?

7. What has been the rate of profits annually for the last three years? If a joint stock company, what dividends have been received?

8. What portion of the income of the company has been converted into fixed capital, or retained for contingent or other objects, and, therefore, not annually divided?

9. Causes of the increase (or decrease) of profit at different periods of time?

10. Rates of profit on capital otherwise employed in the same county and State?

11. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?

12. Quantity and value of raw materials annually used, distinguishing between foreign and domestic products?

13. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?

14. Number of men, women, and children employed, and average wages of each class?

15. How many hours a day employed, and what portion of the year?

16. Rate of wages of similar classes otherwise employed in the same State and county?

17. Number of horses or other animals employed?

18. Whether the manufactures find a vent at the manufactory? If not, how far they are sent to a market?

19. Whether foreign articles of the like kind enter into competition with them at such place of sale?

20. Where are the manufactures consumed?

## ANSWERS.

6. No part of the capital is borrowed.

7. Within the last three years, the whole establishment has been built new, the old mill being destroyed by fire in 1829; since which time we have made two semi-annual dividends, the last year of \$3,000 each, which is about four per cent. half-yearly on the amount of capital.

8. About the whole net profits have been divided.

9. The low price of goods, owing to home competition, has caused a constant decrease in the profits.

10. To this question I cannot give any reasonable answer

11. We are now using 800 bales, 267,000 lbs. of prime Alabama and Georgia cotton, at 11½ cts. per lb., \$30,722  
10,500 lbs. of starch, at 7½ cts. per lb. 787  
1,500 gallons sperm oil, at 80 cts. per gallon, 1,200  
Wood, leather, iron, steel, coal, lumber, and other materials, say 8,000

Annually \$40,709

12. We manufacture about one million yards of 3-4 cotton shirting, and 4-4 shirtings per year, from yarn No. 16.

13. I do not think there is any goods of the description of ours imported into this country at the present time; if any, the quantity is very small.

14. Say 20 men in various departments, in the manufactory and machine shop, at an average of 10s. per day. 90 young women, average, exclusive of board, \$1 per week; including board, \$2 per week. 80 children, from 6s. per week to 14s. per week, exclusive of board.

15. Twelve hours per day through the year.

16. I think we pay rather higher wages than is paid to the same class of persons otherwise employed.

17. We have none that are employed constantly in our business.

18. A part of the goods, say one-third, are sold in this section of country for home use. The remainder are sent to New York for a market.

19. I know of no foreign article that enters directly into competition with our goods; but indirectly calico and other printed and colored goods do.

20. The goods we manufacture are principally consumed in the county for shirtings and sheetings; some of them, however, are printed.

DOCUMENT 10.—No. 17—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                    | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>21. Whether any of the manufactures are exported to foreign countries? If so, where?</p>                                                                                                                                                                   | <p>21. Large quantities of coarse cotton shirtings and sheetings are exported to South America, and lately some shipments have been made to Calcutta and other ports beyond the Cape of Good Hope, and up the Mediterranean.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <p>22. Whether the manufacture is sold by the manufacturer for cash? If on credit, at what credit? If bartered, for what?</p>                                                                                                                                 | <p>22. Our sales at home are principally for cash, or on short credit. When sold in New York, a credit of eight months is allowed.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <p>23. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?</p> | <p>23. There has been a constant decrease in the price of the manufactured article since 1810, nearly according to the annexed table to question 24. I attribute the cause of the decrease in prices, first, to improvement in, and increase of labor-saving machinery, the cost of the raw material, the price of labor, the cost of machinery, &amp;c., and home competition.</p>                                                                                                                                                                                                                                                                                                                                                                  |
| <p>24. The prices at which the manufacture has been sold by the manufacturer since the establishment?</p>                                                                                                                                                     | <p>24. Our goods will probably not average, as cash, over seven cents the coming year. It will be observed that our goods are stout and heavy, and not surpassed by any goods of the kind in market.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|                                                                                                                                                                                                                                                               | <p><i>Price of 3-4 cotton sheetings per yard from 1812 to 1832.</i></p> <p>1812, 28 cts.; 1813, 28-29 cts.; 1814, 30-32 cts.; 1815, 28-30 cts.; 1816, 26 28 cts.; 1817, 24-27 cts.; 1818, 24 cts.; 1819, 24-16 cts.; 1820, 16-14 cts.; 1821, 14-12 cts.; 1822, 12-11 cts.; 1823, 11-10 cts.; 1824, 11-10 cts.; 1825, 11-10 cts.; 1826, 10 cts.; 1827, 10-9 cts.; 1828, 9 cts.; 1829, 6½ cts.; 1830, 6½-7½ cts.; 1831, 8½ cts.; 1832, 8 cts.</p>                                                                                                                                                                                                                                                                                                      |
| <p>25. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?</p>                                                                                                             | <p>25. I have no doubt but we can make most articles of coarse cotton goods, of the same quality and weight of stock, nearly as cheap as they can be made in any country. It is a well-known fact, that the description of cotton we use never enters into a similar fabric made in England; but all the coarse cotton goods are made of the most inferior American cottons, cotton waste, Surat, and Bengal cottons. With such stock, a similar article to ours can be made for at least 1½ cent. per yard cheaper than we can make the same article of prime upland and Louisiana cottons as we do. I cannot say what import duty would be necessary to enable us to enter into competition with the foreign article under such circumstances.</p> |

| QUESTIONS.                                                                                                                                                                                                       | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| <p>26. Is any change necessary in levying or collecting duties on such articles, to prevent fraud?</p>                                                                                                           | <p>26. I know of none.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <p>27. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?</p>                              | <p>27. I estimate the cost of the raw material, at - - - 45 per ct.<br/> Cost of the labor - - - 30 "<br/> Natural wear and tear (including new improvement) in machinery 15 "<br/> Interest on capital invested - 10 "<br/> 100 "</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <p>29. What quantity or amount of manufactures, such as you make, is produced in the United States, and what amount in this State?</p>                                                                           | <p>The present year will not produce the above results, as goods are very much fallen off in price, and cotton advancing.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <p>30. If the duty upon the foreign manufacture of the kind of goods which you make, were reduced to 12½ per cent., would it cause you to abandon your business, or would you manufacture at reduced prices?</p> | <p>29. I have not the data at hand to enable me to answer this question. (See report of the Tariff Convention Committee on Cotton Manufactures)</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <p>31. If it would cause you to abandon your business, in what way would you employ your capital?</p>                                                                                                            | <p>30, 31, 32. I do believe that if the import duty was reduced to 12½ per cent., our country would be flooded with the inferior fabric of Britain, made from cheap foreign cotton, to such an extent as to cause us to entirely abandon our business. We could not make the article we are now making from prime Georgia and Alabama cotton, as cheap, by 1½ cent per yard, as the British article made of cheap foreign cotton: while the appearance of the British article would nearly equal ours, its intrinsic worth would not be one-half. Besides, our printing establishments would be furnished with this same cheap article, and thus displace the more durable and substantial goods made from the product of our own soil, and the labor of our own countrymen. The labor and capital of our country, by the adoption of such a policy, would be so paralyzed and distracted, that it would be next to impossible to foresee the result, or to give any opinion as to the profits arising from any business.</p> |
| <p>32. Is there any pursuit in which you could engage, from which you could derive greater profits, even after a reduction of the import duties to 12½ per cent.?</p>                                            | <p>33. I cannot say what reduction of the present import duties would enable the British manufacturer to bring a similar article into our market. But the fact is, that a little foreign or domestic competition would reduce our business to a less profit than 6 per cent., or even to an actual loss, as was the fact in 1829. To the printing establishment of our country we are indebted for the degree of prosperity we have enjoyed for the last two years. I do think if our market were not relieved by printing the grey cloth, some of our manufactories of this article would be under the necessity of stopping or working without a profit.</p>                                                                                                                                                                                                                                                                                                                                                                |
| <p>33. What amount of reduction in the duties would enable the actual or real capital employed, to yield an interest of 6 per cent., and how gradual should the reduction be?</p>                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| QUESTIONS.                                | ANSWERS.                                                               |
|-------------------------------------------|------------------------------------------------------------------------|
| 33. Average rate of wages in your county? | 35. Common laborers, 6s. per day. Mechanics, from 8s. to 12s. per day. |

The above statement is made in anticipation of what we shall produce when the whole of our machinery is in operation, which will be in the course of the present spring.

WM. WALCOTT,

*Agent for Oneida Manufacturing Society.*

WHITESTOWN, March 20, 1832.

Mr. Walcott is a very intelligent manufacturer, and in all respects worthy of credit.

J. A. DIX.

## DOCUMENT 10.—No. 18.

*Oneida Cotton Factory, situate in the town of New Hartford, in the County of Oneida, in the State of New York, March, 1832.*

| QUESTIONS.                                                                                                                                                           | ANSWERS.                                                                                                                                                                                                                   |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. By what power—water, steam, or what other?                                                                                                                        | 1. Water power.                                                                                                                                                                                                            |
| 2. When established; and whether a joint stock concern?                                                                                                              | 2. 1814. Is a joint stock company.                                                                                                                                                                                         |
| 3. Capital invested in ground and buildings, water power and machinery?                                                                                              | 3. Seventy thousand dollars.                                                                                                                                                                                               |
| 4. Average amount in materials, in cash for the purchase of materials, and payment of wages?                                                                         | 4. Yearly expenses for materials \$6000, and \$16,000 for labor of workmen.                                                                                                                                                |
| 5. Annual rate of profit on the capital invested since the establishment of the manufactory?                                                                         | 5. For the first seven years, the factory was an expense to the company, being still most of the time: since which some years may have produced on the capital 3, 4, 5, and 6 per cent.                                    |
| 6. How much of the capital is borrowed, and what interest is paid on it?                                                                                             | 6. Ten thousand dollars is borrowed at the rate of 7 per cent.                                                                                                                                                             |
| 7. What has been the rate of profits annually for the last three years? If a joint stock company, what dividends have been received?                                 | 7. 1829 and 1830 resulted in a loss; 1831 produced a profit of 10 per cent.; no dividends have been made.                                                                                                                  |
| 8. What portion of the income of the company has been converted into fixed capital, or retained for contingent or other objects, and therefore not annually divided? | 8. All the earnings of the company have been converted into capital.                                                                                                                                                       |
| 9. Causes of the increase (or decrease) of profit at different periods of time?                                                                                      | 9. Variation in the price of goods.                                                                                                                                                                                        |
| 10. Rates of profit on capital otherwise employed in the same county and State?                                                                                      | 10. Unknown.                                                                                                                                                                                                               |
| 11. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                               | 11. \$455,867 35 of goods have been made since its commencement, principally 3-4 and 4-4 goods, No. 16; 6-4 tickings; prices of shirtings from 6 to 15 cents; sheetings 7½ to 18 cents; tickings 25 to 100 cents per yard. |

| QUESTIONS.                                                                                                                                                                                                                                             | ANSWERS.                                                                                                                                                                                                                                              |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 12. Quantity and value of raw materials annually used, distinguishing between foreign and domestic products?                                                                                                                                           | 12. Raw cotton used yearly \$25,000 worth.                                                                                                                                                                                                            |
| 13. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                        | 13. No similar goods imported.                                                                                                                                                                                                                        |
| 14. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                      | 14. Sixteen men, averaging \$6 17 weekly, and 19 boys, averaging \$1 83 per week, and 76 women and girls, averaging \$2 25 pr. wk.                                                                                                                    |
| 15. How many hours a day employed, and what portion of the year?                                                                                                                                                                                       | 15. Twelve hours per day during the year, except holidays.                                                                                                                                                                                            |
| 16. Rate of wages of similar classes otherwise employed in the same State and county?                                                                                                                                                                  | 16. Unknown.                                                                                                                                                                                                                                          |
| 17. Number of horses or other animals employed?                                                                                                                                                                                                        | 17. One horse employed by the company. About 20 cows and a few horses are kept by the people on the premises.                                                                                                                                         |
| 18. Whether the manufactures find a vent at the manufactory? If not, how far they are sent to a market?                                                                                                                                                | 18. About two-thirds of the goods are sold in the vicinity, the residue at N. York.                                                                                                                                                                   |
| 19. Whether foreign articles of the like kind enter into competition with them at such place of sale, and to what extent?                                                                                                                              | 19. We know of no foreign goods of the description we make imported.                                                                                                                                                                                  |
| 20. Where are the manufactures consumed?                                                                                                                                                                                                               | 20. Principally in western New York, Ohio, and Michigan.                                                                                                                                                                                              |
| 21. Whether any of the manufactures are exported to foreign countries? If so, where?                                                                                                                                                                   | 21. Many are exported to various countries.                                                                                                                                                                                                           |
| 22. Whether the manufacture is sold by the manufacturer for cash? If on credit, at what credit? If bartered, for what?                                                                                                                                 | 22. Some is sold for cash, but mostly at 6 months' credit; considerable is exchanged for agricultural productions.                                                                                                                                    |
| 23. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 23. The cost of manufacturing has very materially decreased, which is owing to various causes, viz. the power loom one great cause, improved machinery and experience in business another. Very little alteration has occurred in the price of labor. |
| 24. The prices at which the manufacture has been sold by the manufacturer since the establishment?                                                                                                                                                     | 24. See answer to inquiry No. 11.                                                                                                                                                                                                                     |
| 25. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                             | 25. It is very difficult to say exactly what duty is necessary to secure protection. All that is wanted is protection, and unless that is obtained the manufacture must cease.                                                                        |
| 26. Is any change necessary in levying or collecting duties on such articles to prevent fraud?                                                                                                                                                         | 26. Fraud is no doubt often committed on the revenue, and by false invoices, i. e. by undervaluing the cost of the goods imported.                                                                                                                    |
| 27. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                           | 27. Raw material \$25,000; wages of labor \$16,000; other materials \$6000; profits uncertain.                                                                                                                                                        |
| 28. What amount of the agricultural productions of the county is consumed in your establishment, and what amount of other domestic productions?                                                                                                        | 28. Amount is not ascertained. A population of 250 persons is sustained by the establishment.                                                                                                                                                         |
| 29. What quantity or amount of manufactures, such as you make, is produced in the United States, and what amount in this State?                                                                                                                        | 29. We are advised that upwards of thirty millions of goods such as we make, are made yearly in the United States.                                                                                                                                    |
| 30. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., would it cause you to abandon your business, or would you manufacture at reduced prices?                                               | 30. Should the duty be reduced to 12½ per cent., we have no doubt we should have to abandon the business. We cannot now reduce the price of manufacturing.                                                                                            |

## DOCUMENT 10.—No. 18—Continued.

| QUESTIONS.                                                                                                                                                                | ANSWERS.                                                                                                                                                                                                                                                         |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 31. If it would cause you to abandon your business, in what way would you employ your capital?                                                                            | 31. Should we have to abandon our business, our capital would be totally lost, save about ten per cent., or it may be doubtful whether so much would be realized."                                                                                               |
| 32. Is there any pursuit in which you could engage, from which you could derive greater profits, even after a reduction of the import duties to 12½ per cent.?            | 32. When the duties are reduced to 12½ per cent., we must pursue some other business, but we cannot expect any means from the ruins of the present.                                                                                                              |
| 33. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent., and how gradual should the reduction be? | 33. This is a question difficult to answer, as, unless protection is realized, no profit whatever could be expected; hence any reduction in duty cannot avail, as by a reduction revenue is no doubt the object; but when revenue is obtained protection ceases. |
| 34. Average profit of money or capital in your county?                                                                                                                    | 34. The rate of interest is seven per cent. Capital produces sometimes much more; and sometimes much less.                                                                                                                                                       |
| 35. Average rate of wages in your county?                                                                                                                                 | 35. Unknown.                                                                                                                                                                                                                                                     |

All which is respectfully submitted.  
 Utica, March 24, 1832.

E. B. SHEARMAN & CO.,  
 Agents Utica Cotton Manufacturing Company.

Mr. Shearman is a highly intelligent merchant, and a very respectable man. J. A. DIX.

## DOCUMENT 10.—No. 19.

*Manufactory of the New Hartford Manufacturing Society, situate in the town of New Hartford, in the County of Oneida, in the State of New York, March, 1832.*

| QUESTIONS.                                                                                                                                                           | ANSWERS.                                                                                                                                                                                           |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. By what power—water, steam, or what other?                                                                                                                        | 1. By water power.                                                                                                                                                                                 |
| 2. When established; and whether a joint stock concern?                                                                                                              | 2. Buildings erected in 1811; a joint stock concern.                                                                                                                                               |
| 3. Capital invested in ground and buildings, water power and machinery?                                                                                              | 3. Sixty thousand dollars; floating capital fifteen thousand.                                                                                                                                      |
| 4. Average amount in materials, in cash for the purchase of materials, and payment of wages?                                                                         | 4. For materials twenty-one thousand dollars; for wages fifteen thousand dollars.                                                                                                                  |
| 5. Annual rate of profit on the capital invested since the establishment of the manufactory?                                                                         | 5. From 1821, the time at which I took charge of the factory, until 1829, say 8 per cent.; from 1829 to 1830, 4 per cent.; and from 1830 to 1831, 8 per cent.; and from 1831 to 1832, 10 per cent. |
| 6. How much of the capital is borrowed, and what interest is paid on it?                                                                                             | 6. No capital borrowed.                                                                                                                                                                            |
| 7. What has been the rate of profits annually for the last three years? If a joint stock company, what dividends have been received?                                 | 7. From 1829 to 1830, 4 per cent.; from 1830 to 1831, 8 per cent.; and from 1831 to 1832, 10 per cent. Dividends for 1829, 4 per cent.; 1830, no dividend; 1831, 10 per ct.                        |
| 8. What portion of the income of the company has been converted into fixed capital, or retained for contingent or other objects, and therefore not annually divided? | 8. During the last three years, 8 per cent. of the profits has been converted into fixed capital; and ten thousand dollars of the floating capital has been appropriated to the same purpose.      |
| 9. Causes of the increase (or decrease) of profit at different periods of time?                                                                                      | 9. See answer to 23d query.                                                                                                                                                                        |

| QUESTIONS.                                                                                                                                                                                                                                             | ANSWERS.                                                                                                                                                                                                                                                                                                                                            |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10. Rates of profit on capital otherwise employed in the same county and State?                                                                                                                                                                        | 10. I am not sufficiently acquainted with the employment of capital in the county to ascertain the profits.                                                                                                                                                                                                                                         |
| 11. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                 | 11. Not having been employed until June, 1821, it would be out of my power to state, with any degree of certainty, the amount of manufactured articles before that period; and from that till the present year, I have no data sufficiently accurate to enable me to state the quantity manufactured annually.                                      |
| 12. Quantity and value of raw materials annually used, distinguishing between foreign and domestic products?                                                                                                                                           | 12. 160,000 pounds of cotton at 11½ cents per pound, \$18,400; transportation, &c. of same \$2,000; sperm oil \$500; candles \$100; flour \$420; wood \$200.                                                                                                                                                                                        |
| 13. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                        | 13. See answer to 12.                                                                                                                                                                                                                                                                                                                               |
| 14. Number of men, women and children employed, and average wages of each class?                                                                                                                                                                       | 14. 14 men, average wages \$7 50 per week, including board; 45 girls, from 16 to 24, average wages \$2 per week, including board; 40 girls, from 11 to 15, average wages \$1 62 per week, including board; 10 boys, from 10 to 14, average wages \$1 62 do.                                                                                         |
| 15. How many hours a day employed, and what portion of the year?                                                                                                                                                                                       | 15. 12 hours a day the whole year, except holidays.                                                                                                                                                                                                                                                                                                 |
| 16. Rate of wages of similar classes otherwise employed in the same State and county?                                                                                                                                                                  | 16. Men from \$1 to \$1 25 per day, including board; girls, from 16 to 24, from 75 cents to \$1, do.; the second class of girls and boys very little except their board.                                                                                                                                                                            |
| 17. Number of horses or other animals employed?                                                                                                                                                                                                        | 17. 1 horse and 23 cows.                                                                                                                                                                                                                                                                                                                            |
| 18. Whether the manufactures find a vent at the manufactory? If not, how far they are sent to a market?                                                                                                                                                | 18. One-third sent to New York, one-third sent to the western country, and one-third sold at the factory.                                                                                                                                                                                                                                           |
| 19. Whether foreign articles of the like kind enter into competition with them at such place of sale, and to what extent?                                                                                                                              | 19. I believe no articles of a similar kind are imported.                                                                                                                                                                                                                                                                                           |
| 20. Where are the manufactures consumed?                                                                                                                                                                                                               | 20. The greater part consumed in the United States; a small portion sent abroad.                                                                                                                                                                                                                                                                    |
| 21. Whether any of the manufactures are exported to foreign countries? If so, where?                                                                                                                                                                   | 21. A portion, I believe, are sent to South America.                                                                                                                                                                                                                                                                                                |
| 22. Whether the manufacture is sold by the manufacturer for cash? If on credit, at what credit? If bartered, for what?                                                                                                                                 | 22. Generally sold on a credit of six mo's.                                                                                                                                                                                                                                                                                                         |
| 23. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 23. The decrease in price has been owing to improvement in machinery, experience and skill in manufacture, the great increase of capital employed in manufactures, and the power looms which have reduced the price of weaving from six cents to one, and, in some measure, to the variation in the price of materials at different periods.        |
| 24. The prices at which the manufacture has been sold by the manufacturer since the establishment?                                                                                                                                                     | 24. In 1812, I am informed the cloths sold at 30 cents; from that time till 1821, it declined until it fell to 12 cents; from that time until 1824, 10 cents, and continued at about that price until 1828, when they sold at 8 cents; in 1829 and 1830, they sold at 6 cents; and from that until 1832, they sold at 8 cents, and now sell for 7½. |

| 25. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                           | 25. See answer to the 30th query.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 26. Is any change necessary in levying or collecting duties on such articles to prevent fraud?                                                                                                                       | 26. My residence being distant from the place of the collection of duties, I can give no answer.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 27. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                         | 27. Cotton for one yard of cloth, $3\frac{1}{2}$ cents; spinning, dressing and weaving do., $2\frac{1}{2}$ cents; oil, flour, wood, candles, repairs, insurance, commissions, losses on sales, $\frac{1}{2}$ cent; the profit on capital 1 cent, if the goods brought $7\frac{1}{2}$ cts.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 28. What amount of the agricultural productions of the county is consumed in your establishment, and what amount of other domestic productions?                                                                      | 28. The whole amount of agricultural and other domestic productions, consumed by the laborers and others connected with the manufactory, would be \$10,000 per annum.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 29. What quantity or amount of manufactures, such as you make, is produced in the United States, and what amount in this State?                                                                                      | 29. I am not acquainted with the amount produced.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 30. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to $12\frac{1}{2}$ per cent., would it cause you to abandon your business, or would you manufacture at reduced prices? | 30. If the duty upon the foreign manufacture were reduced to $12\frac{1}{2}$ per cent., I think it would, eventually, destroy the manufacture of the kind of goods we make; as it would be the cause of a great many of the establishments which now are devoted to the finer fabrics to change their business to the coarser cloths, and would so increase the quantity as to reduce the price so low as to ruin all the weaker establishments. Besides, it would enable foreigners to enter into the market, and probably sell under what we could afford, as the improvements, in every respect, have gone on in Europe as well as here; and, it is believed, have much exceeded us in many respects, and I believe, further, if it had not been for the aid given us by the tariff of 1816 and 1824, we could not have continued to do what we have done, but must have yielded to the importations. |
| 31. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                       | 31. If the business should be abandoned, it would be almost a total loss, except the floating capital.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 32. Is there any pursuit in which you could engage, from which you could derive greater profits, even after a reduction of the import duties to $12\frac{1}{2}$ per cent.?                                           | 32. In my opinion, the business could not be carried on after such a reduction.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 33. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent., and how gradual should the reduction be?                                            | 33. If the reduction of duties should reduce the price of goods below $7\frac{1}{2}$ cents, we could not make 6 per cent. upon the capital.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 34. Average profit of money or capital in your county?                                                                                                                                                               | 34. Seven per cent., the customary interest.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 35. Average rate of wages in your county?                                                                                                                                                                            | 35. **Messrs. Marshalls have commenced using coal; estimate their requirements for a year 2,000 tons.**

This abstract was prepared with great care by Mr. Richard P. Hart, of Troy, from original returns furnished by the agents and proprietors of cotton and, so far as I examined them, it is perfectly accurate.

**P. S.**—This is an entire view of all the cotton establishments in the State of New York.

**JOHN A. DIX.**

## DOCUMENT 10.—No. 21.

*Glenham Company's Manufactory of Broad Cloth, situate in the town of Fishkill, in the County of Dutchess, in the State of New York, March, 1832.*

| QUESTIONS.                                                                                                                                                           | ANSWERS.                                                                                                                                                                             |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. By what power—water, steam, or what other?                                                                                                                        | 1. Water.                                                                                                                                                                            |
| 2. When established; and whether a joint stock concern?                                                                                                              | 2. 1822: joint stock.                                                                                                                                                                |
| 3. Capital invested in ground and buildings, water power and machinery?                                                                                              | 3. \$100,000.                                                                                                                                                                        |
| 4. Average amount in materials, in cash for the purchase of materials, and payment of wages?                                                                         | 4. It requires from 20 to \$40,000 to carry on this company business, in materials, &c., &c.                                                                                         |
| 5. Annual rate of profit on the capital invested since the establishment of the manufactory?                                                                         | 5. Less than one per cent. per annum.                                                                                                                                                |
| 6. How much of the capital is borrowed, and what interest is paid on it?                                                                                             | 6. \$40,000 at six per cent., as a floating capital; but none of the \$100,000 is borrowed.                                                                                          |
| 7. What has been the rate of profits annually for the last three years: if a joint stock company, what dividends have been received?                                 | 7. Three per cent.                                                                                                                                                                   |
| 8. What portion of the income of the company has been converted into fixed capital, or retained for contingent or other objects, and therefore not annually divided? | 8. None, except to make up for wear and tear.                                                                                                                                        |
| 9. Causes of the increase (or decrease) of profit at different periods of time?                                                                                      | 9. Frauds on the revenue to such an extent, that not half the duties for protection has been received; and, consequently, a continued overstock of goods.                            |
| 10. Rates of profit on capital otherwise employed in the same county and State?                                                                                      | 10. Presumed to be from six to ten per cent.                                                                                                                                         |
| 11. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                               | 11. Present annual value of manufacture, one hundred and fifteen thousand dollars. Average annual value from the beginning, about seventy thousand dollars.                          |
| 12. Quantity and value of raw materials annually used, distinguishing between foreign and domestic products?                                                         | 12. 105,000 lbs. of wool, about four-fifths American fleece wool. Value during the year 1831, was about \$63,000.                                                                    |
| 13. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                      | 13. On the average at present, cloths do not bring the cost of importation, if the duties are honestly paid, imported from any where.                                                |
| 14. Number of men, women, and children, employed, and average wages of each class?                                                                                   | 14. One hundred and thirty. 30 men, wages, average, \$6 per week; 40 boys, do. do. \$2; 50 women, do. do. \$2 25; 10 girls, under 16, \$1 50. Total wages per annum, about \$27,000. |
| 15. How many hours a day employed, and what portion of the year?                                                                                                     | 15. Average 11½ hours throughout the year.                                                                                                                                           |
| 16. Rate of wages of similar classes otherwise employed in the same State and county?                                                                                | 16. As mechanics in general, the rate is rather over those employed in the woollen business, except very skillful hands.                                                             |
| 17. Number of horses or other animals employed?                                                                                                                      | 17. Constantly three horses, besides hiring transportation.                                                                                                                          |
| 18. Whether the manufactures find a vent at the manufactory? If not, how far they are sent to a market?                                                              | 18. They do not, but in a trifling degree. They are sent to New York for sale.                                                                                                       |
| 19. Whether foreign articles of the like kind enter into competition with them at such place of sale, and to what extent?                                            | 19. They do, to an extent that is nearly ruinous; as answers to queries Nos. 5 and 7 will show.                                                                                      |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>20. Where are the manufactures consumed?</p> <p>21. Whether any of the manufactures are exported to foreign countries? If so, where?</p> <p>22. Whether the manufacture is sold by the manufacturer for cash? If on credit, at what credit? If bartered, for what?</p> <p>23. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?</p> <p>24. The prices at which the manufacture has been sold by the manufacturer since the establishment?</p> <p>25. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?</p> <p>26. Is any change necessary in levying or collecting duties on such articles to prevent fraud?</p> <p>27. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?</p> <p>28. What amount of the agricultural productions of the county is consumed in your establishment, and what amount of other domestic productions?</p> <p>29. What quantity or amount of manufactures, such as you make, is produced in the United States, and what amount in this State?</p> <p>30. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., would it cause you to abandon your business, or would you manufacture at reduced prices?</p> <p>31. If it would cause you to abandon your business, in what way would you employ your capital?</p> <p>32. Is there any pursuit in which you could engage, from which you could derive greater profits, even after a reduction of the import duties to 12½ per cent.?</p> <p>33. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of six per cent., and how gradual should the reduction be?</p> | <p>20. In the United States.</p> <p>21. None.</p> <p>22. Sales are made by one of the owners in New York, on credit of 6, 7, and 8 months.</p> <p>23. The reduction of cost of manufacturing the same kind of goods is about fifty per cent. since 1822, (gradually in each year,) principally by the introduction of labor-saving machinery. The labor has fluctuated from 20 to 25 per cent.; materials from 1 to 100 per cent.</p> <p>24. The same cloth that was sold at \$3 50 the yard, when the establishment began, (wool at the same price as now,) such cloth will only bring two dollars the yard.</p> <p>25. Having all the materials at as low a rate as the foreigner, 25 per cent. duty on the imported article will be a protection, if the duty is fully collected, not as heretofore, scarcely the half of it.</p> <p>26. Mark or stamp the minimum on each piece, at which they are to pay duty, and allow no change of original marks, under heavy penalties.</p> <p>27. At present it is as follows: Wool, raw material, 50 per cent.; dyeing materials, labor, wear and tear, and various other contingencies, 50 per cent.; profits of capital, 0.</p> <p>28. About seventy thousand dollars of agricultural productions.</p> <p>29. Not known.</p> <p>30. If the duty were reduced to 12½ per cent. on cloths, this establishment could not be kept in operation a month; and what is now worth \$100,000 in buildings and machinery, would not sell for more than \$10,000, if it could be sold at all.</p> <p>31. It will be seen by the foregoing answer that there would be no capital left to be employed, which would literally be the fact.</p> <p>32. After having read the answers to the 31 foregoing queries, I think it will be very plainly seen that a reduction of the duties to 12½ per cent. would completely ruin the manufacturer engaged in this business.</p> <p>33. If the present rates of duties are not more faithfully collected than they have been since the law of 1828 has passed, it will be impossible for the woollen manufacturer to make a clear interest of six per cent. on his capital. The whole woollen manufacturers of the country have not averaged a profit of six per cent. on their capital since 1828.</p> |

| QUESTIONS.                                             | ANSWERS.                                                                                    |
|--------------------------------------------------------|---------------------------------------------------------------------------------------------|
| 34. Average profit of money or capital in your county? | 34. From six to ten per cent. on the general manufactures of the county, excepting woollen. |
| 35. Average rate of wages in your county?              | 35. Mechanics, \$1 25 per day; laborers, 75 cents.                                          |

I have answered the foregoing questions as correctly as I possibly can. I was the original founder of the Glenham Company, and am a fourth owner, and it has been a child of my particular care. I have brought the manufactory of cloths to great perfection in it. It has proved of great importance to our county, and the country in general, but has most wretchedly requited its stockholders, and myself in particular, for the attention and care bestowed on it; owing to the neglect of Government to levy protective duties in time, and still more to their negligence in having them properly collected.

PETER H. SCHENCK.

NEW YORK, March, 1832.

This statement is made by Mr. Peter H. Schenck, of New York, who is well known at Washington, and doubtless to the department.

J. A. DIX.

The attention of the department is respectfully invited to Mr. Schenck's reply to question 25.

## DOCUMENT 10.—No. 22.

*Woollen Manufactory of Bower and Kirk, situate in the town of Poughkeepsie, in the County of Dutchess, in the State of New York, March, 1832.*

| QUESTIONS.                                                                                                                                                           | ANSWERS.                                                                                                           |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------|
| 1. By what power—water, steam, or what other?                                                                                                                        | 1. Water power.                                                                                                    |
| 2. When established; and whether a joint stock concern?                                                                                                              | 2. Three years ago; joint, but not incorporated.                                                                   |
| 3. Capital invested in ground and buildings, water power and machinery?                                                                                              | 3. Six thousand and thirty dollars.                                                                                |
| 4. Average amount in materials, in cash for the purchase of materials, and payment of wages?                                                                         | 4. For labor, eighty-two dollars fifty cents per week; raw materials two hundred and thirty-five dollars per week. |
| 5. Annual rate of profit on the capital invested since the establishment of the manufactory?                                                                         | 5. There has been nothing more than seven per cent., and which goes for rent and privileges.                       |
| 6. How much of the capital is borrowed, and what interest is paid on it?                                                                                             | 6. Six thousand and thirty dollars, at seven per cent.                                                             |
| 7. What has been the rate of profits annually for the last three years:—if a joint stock company, what dividends have been received?                                 | 7. Nothing more than the use of the money.                                                                         |
| 8. What portion of the income of the company has been converted into fixed capital, or retained for contingent or other objects, and therefore not annually divided? | 8. None.                                                                                                           |

| QUESTIONS.                                                                                                                                                                                                                                             | ANSWERS.                                                                                                                                                                                                                                |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 9. Causes of the increase (or decrease) of profit at different periods of time?                                                                                                                                                                        | 9. The cause is very plain; for instance whenever there is a bad trade in England, or any failure in large houses, all their surplus and sacrifices come to this market, and always will as long as they come in at an ad valorem duty. |
| 10. Rates of profit on capital otherwise employed in the same county and state?                                                                                                                                                                        | 10. From six to ten per cent.                                                                                                                                                                                                           |
| 11. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                 | 11. Seven thousand two hundred and eighty yards of broad cloths annually, averaging two dollars and twenty-five cents per yd.                                                                                                           |
| 12. Quantity and value of raw materials annually used, distinguishing between foreign and domestic products?                                                                                                                                           | 12. Nine thousand pounds of domestic wool principally raised in Duchess county; three thousand and thirty pounds of foreign wool; about five hundred dollars annually for oil and dye wares.                                            |
| 13. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                        | 13. Dont know.                                                                                                                                                                                                                          |
| 14. Number of men, women and children employed, and average wages of each class?                                                                                                                                                                       | 14. Fifteen men, average wages five dollars per week, and five children at one dollar and fifty cents per week.                                                                                                                         |
| 15. How many hours a day employed, and what portion of the year?                                                                                                                                                                                       | 15. The whole year; average time twelve hours per day.                                                                                                                                                                                  |
| 16. Rate of wages of similar classes otherwise employed in the same State and county?                                                                                                                                                                  | 16. From one dollar to one dollar and fifty cents per day.                                                                                                                                                                              |
| 17. Number of horses or other animals employed?                                                                                                                                                                                                        | 17. One horse.                                                                                                                                                                                                                          |
| 18. Whether the manufactures find a vent at the manufactory? If not, how far they are sent to a market?                                                                                                                                                | 18. Sent to the New York market, about eighty miles.                                                                                                                                                                                    |
| 19. Whether foreign articles of the like kind enter into competition with them at such place of sale?                                                                                                                                                  | 19. Yes, and always will as long as there is an ad valorem duty.                                                                                                                                                                        |
| 20. Where are the manufactures consumed?                                                                                                                                                                                                               | 20. Don't know.                                                                                                                                                                                                                         |
| 21. Whether any of the manufactures are exported to foreign countries? If so, where?                                                                                                                                                                   | 21. Can't answer.                                                                                                                                                                                                                       |
| 22. Whether the manufacture is sold by the manufacturer for cash? If on credit, at what credit? If bartered, for what?                                                                                                                                 | 22. Sold on a credit of from six to eight months at an expense of six per cent.                                                                                                                                                         |
| 23. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 23. From 1830 to 1831 the increase on materials was double; no alteration in labor.                                                                                                                                                     |
| 24. The prices at which the manufacture has been sold by the manufacturer since the establishment?                                                                                                                                                     | 24. Broad cloths average two dollars and twenty-five cents per yard.                                                                                                                                                                    |
| 25. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                             | 25. Twenty-five per cent. on the goods valued in this country; then there will be no need of false invoices and false oaths.                                                                                                            |
| 26. Is any change necessary in levying or collecting duties on such articles to prevent fraud?                                                                                                                                                         | 26. Most certainly it is; we have not an advantage of ten per cent.; we have known goods pass the custom-house at two shillings and six pence sterling, which cost four and six pence in the English market.                            |

## DOCUMENT 10.—No. 33—Continued.

| QUESTIONS.                                                                                                                                                                                               | ANSWERS.                                                                                                                                                               |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 27. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                             | 27. Twelve shillings for materials, six shillings for wages, leaving nothing for the profits on capital.                                                               |
| 28. What amount of the agricultural productions of the county is consumed in your establishment, and what amount of other domestic productions?                                                          | 28. About four thousand two hundred and ninety dollars worth annually.                                                                                                 |
| 29. What quantity or amount of manufactures, such as you make, is produced in the U. States, and what amount in this State?                                                                              | 29. Cannot answer.                                                                                                                                                     |
| 30. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., would it cause you to abandon your business, or would you manufacture at reduced prices? | 30. We should abandon our business.                                                                                                                                    |
| 31. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                           | 31. If the duties should be reduced to 12½ per cent., it would cause a sacrifice on our stock and goods on hand which would take all our capital and bring us in debt. |
| 32. Is there any pursuit in which you could engage, from which you could derive greater profits, even after a reduction of the import duties to 12½ per cent.?                                           | 32. Any thing then would be better than manufacturing.                                                                                                                 |
| 34. Average profit of money or capital in your county?                                                                                                                                                   | 34. Seven per cent.                                                                                                                                                    |
| 35. Average rate of wages in your county?                                                                                                                                                                | 35. For mechanics, from one dollar to one dollar and seventy-five cents a day.                                                                                         |

## DOCUMENT 10.—No. 23.

*Woollen Manufactory of J. & J. Wadsworth, situate in the town of Poughkeepsie, in the County of Dutchess, State of New York, March, 1832.*

| QUESTIONS.                                                                                   | ANSWERS.                                                                                                                                |
|----------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------|
| 1. By what power—water, steam, or what other?                                                | 1. Water power.                                                                                                                         |
| 2. When established; and whether a joint stock concern?                                      | 2. Commenced in 1826. Joint, but not incorporated.                                                                                      |
| 3. Capital invested in ground and buildings, water power and machinery?                      | 3. Twenty thousand dollars; that is, ten thousand dollars in machinery, and ten thousand dollars in ground, buildings, and water power. |
| 4. Average amount in materials, in cash, for the purchase of materials & payment of wages?   | 4. Thirty-six thousand dollars.                                                                                                         |
| 5. Annual rate of profit on the capital invested since the establishment of the manufactory? | 5. No profit, but a loss for four years last past.                                                                                      |
| 6. How much of the capital is borrowed, and what interest is paid on it?                     | 6. Ten thousand dollars at six per cent.                                                                                                |

| QUESTIONS.                                                                                                                                                             | ANSWERS.                                                                                                                                                                                                    |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7. What has been the rate of profits annually for the last three years? If a joint stock company, what dividends have been received?                                   | 7. No profit, but a great loss.                                                                                                                                                                             |
| 8. What portion of the income of the company has been converted into fixed capital, or retained for contingent or other objects, and, therefore, not annually divided? | 8. None.                                                                                                                                                                                                    |
| 9. Causes of the increase or decrease of profit at different periods of time?                                                                                          | 9. The immense importations in 1828 caused cloths to fall in value. The rise of wool, in anticipation of better prices for cloths, caused the manufacturers to purchase wool at advanced prices.            |
| 10. Rates of profit on capital otherwise employed in the same county and State?                                                                                        | 10. From six to ten per cent.                                                                                                                                                                               |
| 11. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                 | 11. Twelve thousand yards of broadcloth, and about four thousand yards cassimere. The average value of the cloths about two dollars and fifty cents, and the cassimere one dollar and fifty cents per yard. |
| 12. Quantity and value of raw materials annually used, distinguishing between foreign and domestic products?                                                           | 12. About twenty-eight thousand pounds of wool raised in this county. The average price for the last three years, fifty-six cents per pound. Two thousand five hundred dollars in dye wares and oil.        |
| 13. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                        | 13. Cannot tell.                                                                                                                                                                                            |
| 14. Number of men, women, and children employed, and average wages of each class?                                                                                      | 14. Twenty-nine men, two women, and six children. Average wages, five dollars and fifty cents per week for the men; one dollar and fifty cents per week for the women and children.                         |
| 15. How many hours a day employed, and what portion of the year?                                                                                                       | 15. The whole year. Average time, twelve hours per day.                                                                                                                                                     |
| 16. Rate of wages of similar classes otherwise employed in the same State and county?                                                                                  | 16. Not less, but should suppose rather more than what the people make in the factory.                                                                                                                      |
| 17. Number of horses or other animals employed?                                                                                                                        | 17. One horse for the use of the factory.                                                                                                                                                                   |
| 18. Whether the manufactures find a vent at the manufactory? If not, how far they are sent to a market?                                                                | 18. There is always a market to be found for them in the city of New York, a distance of eighty miles, at some price.                                                                                       |
| 19. Whether foreign articles of the like kind enter into competition with them at such place of sale, and to what extent?                                              | 19. Yes, and a very severe one, which will be the case as long as any goods are admitted at any duty, and the importers allowed to fix the value of the cloth on their own invoice.                         |
| 20. Where are the manufactures consumed?                                                                                                                               | 20. In the United States.                                                                                                                                                                                   |
| 21. Whether any of the manufactures are exported to foreign countries? If so, where?                                                                                   | 21. Cannot answer.                                                                                                                                                                                          |
| 22. Whether the manufacture is sold by the manufacturer for cash? If on credit, at what credit? If bartered, for what?                                                 | 22. For cash, or a credit of six and eight months.                                                                                                                                                          |

| QUESTIONS.                                                                                                                                                                                                                                                    | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>23. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased? how much in each year from the establishment of the manufactory? and whether the increase has been in the materials or the labor, and at what rate?</p> | <p>23. The cost increases or decreases according to the price of wool and materials, the wages of labor not varying much for the last three years; and are at the lowest, if people are to live by labor, the price of manufacturing a yard of cloth here costing less than what it ever cost us in England before we left there, which is more than six years ago.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <p>24. The prices at which the manufacture has been sold by the manufacturer since the establishment?</p>                                                                                                                                                     | <p>24. Average two dollars and fifty cents per yard for broadcloths, and one dollar and fifty cents for cassimeres.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <p>25. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?</p>                                                                                                             | <p>25. Twenty-five per cent. was the duty on wool, to be reduced in proportion, and the value of the imported article to be fixed here.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <p>26. Is any change necessary in levying or collecting duties on such articles to prevent fraud?</p>                                                                                                                                                         | <p>26. Most certainly some alteration should be made. We consider the dollar minimum the flood-gate that admits every thing in; and the value of the cloth from whence imported, being the criterion of value, is still worse. Let the duties be collected on the value here, and it will prevent frauds on the revenue. No agent then will have two invoices, or be obliged to swallow oaths. Let there be men who know the value of cloths, to examine them, and there will be no difficulty in manufacturing at a fair profit, if the duty be reduced to twenty-five per cent. This protection would be quite sufficient to the manufacturers, and ought to be to the farmers; then both would prosper, and the south be satisfied. As it is at present, it appears a large protection, but it is not a protection to the manufacturer of twenty per cent., but to the farmer sixty per cent. at least.</p> |
| <p>27. What portion of the cost of your manufactures consists of the price of the raw material; what portion of the wages of labor; and what portion of the profits of capital?</p>                                                                           | <p>27. The materials are more than one-half; the remainder is labor.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <p>28. What amount of the agricultural productions of the county is consumed in your establishment, and what amount of other domestic productions?</p>                                                                                                        | <p>28. Wool and food for support of laborers, about twenty thousand dollars.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <p>29. What quantity or amount of manufactures, such as you make, is produced in the United States, and what amount in this State?</p>                                                                                                                        | <p>29. Cannot tell.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <p>30. If the duty upon the foreign manufacture of the kind of goods which you make, were reduced to 12½ per cent., would it cause you to abandon your business, or would you manufacture at reduced prices?</p>                                              | <p>30. Most certainly, the price of labor is already too low.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <p>31. If it would cause you to abandon your business, in what way would you employ capital?</p>                                                                                                                                                              | <p>31. No capital will be left to employ.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

## DOCUMENT 10.—No. 23—Continued.

| QUESTIONS.                                                                                                                                                                  | ANSWERS.                                                                                                                                                                                                                                                  |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 32. Is there any pursuit in which you could engage, from which you could derive greater profits, even after a reduction of the import duties to 12½ per cent.?              | 32. If we could make a dollar a week by any thing, it would be better.                                                                                                                                                                                    |
| 33. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of six per cent., and how gradual should the reduction be? | 33. We have already said twenty-five per cent. on the value of the goods here, we have no doubt, would realize a profit of six per cent.; and the sooner it is reduced to this the better, that is, on the value of the imported article in this country. |
| 34. Average profit of money or capital in your county?                                                                                                                      | 34. Seven per cent.                                                                                                                                                                                                                                       |
| 35. Average rate of wages in your county?                                                                                                                                   | 35. For mechanics, from one dollar to one dollar and seventy-five cents a day.                                                                                                                                                                            |

## DOCUMENT 10.—No. 24.

*Thomas Williams & Son's Manufactory of Wollen, Cotton, and Cassimere, situate in the town of Poughkeepsie, in the County of Dutchess, in the State of New York, March, 1832.*

| QUESTIONS.                                                                                                                                                           | ANSWERS.                                                                                                              |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------|
| 1. By what power—water, steam, or what other?                                                                                                                        | 1. Water power.                                                                                                       |
| 2. When established; and whether a joint stock concern?                                                                                                              | 2. Established in 1828. An individual concern.                                                                        |
| 3. Capital invested in ground and buildings, water power and machinery?                                                                                              | 3. Fifteen thousand dollars. Real estate and machinery.                                                               |
| 4. Average amount in materials, in cash for the purchase of materials, and payment of wages?                                                                         | 4. Average amount about fifteen thousand dollars.                                                                     |
| 5. Annual rate of profit on the capital invested since the establishment of the manufactory?                                                                         | 5. We believe not over six per cent.                                                                                  |
| 6. How much of the capital is borrowed, and what interest is paid on it?                                                                                             | 6. No permanent loan. Bank facilities about three thousand dollars, at six per cent.                                  |
| 7. What has been the rate of profits annually for the last three years? If a joint stock company, what dividends have been received?                                 | 7. This question answered by the 5th.                                                                                 |
| 8. What portion of the income of the company has been converted into fixed capital, or retained for contingent or other objects, and therefore not annually divided? | 8. The net profits are individual, and are returned in the capital as stated in question 4.                           |
| 9. Causes of the increase (or decrease) of profit at different periods of time?                                                                                      | 9. Excessive importations and frauds on the revenue is undoubtedly the cause of the great fluctuations in our market. |
| 10. Rates of profit on capital otherwise employed in the same county and State?                                                                                      | 10. Not having capital employed in any other business in the State, cannot answer to its profits.                     |
| 11. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                               | 11. About forty-five thousand dollars annually. Fine broadcloths and cassimeres, averaging from \$2 to \$5 per yard.  |

| QUESTIONS.                                                                                                                                                                                                                                             | ANSWERS.                                                                                                                                                                          |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 12. Quantity and value of raw materials annually used, distinguishing between foreign and domestic products?                                                                                                                                           | 12. About 14-16th of the raw material, principally fine wool, the growth of this county, averaging about 55 cents per pound. The 2-16th are mainly dye stuffs, oil, &c. imported. |
| 13. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                        | 13. Broadcloths from England, costing 6s. 3d. sterling the yard, and entered under the dollar minimum. Costs the manufacturer \$2 50 the yard.                                    |
| 14. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                      | 14. Forty-two men, women, and children; average \$4 50 per week, each.                                                                                                            |
| 15. How many hours a day employed, and what portion of the year?                                                                                                                                                                                       | 15. Average twelve hours throughout the year.                                                                                                                                     |
| 16. Rate of wages of similar classes otherwise employed in the same State and county?                                                                                                                                                                  | 16. Unacquainted with the rate of wages out of our own profession.                                                                                                                |
| 17. Number of horses or other animals employed?                                                                                                                                                                                                        | 17. One horse, with occasional hired help.                                                                                                                                        |
| 18. Whether the manufactures find a vent at the manufactory? If not, how far they are sent to a market?                                                                                                                                                | 18. Sent to the city of New York, distance eighty miles.                                                                                                                          |
| 19. Whether foreign articles of the like kind enter into competition with them at such place of sale?                                                                                                                                                  | 19. Yes.                                                                                                                                                                          |
| 20. Where are the manufactures consumed?                                                                                                                                                                                                               | 20. In the United States.                                                                                                                                                         |
| 21. Whether any of the manufactures are exported to foreign countries? If so, where?                                                                                                                                                                   | 21. None that we know of.                                                                                                                                                         |
| 22. Whether the manufacture is sold by the manufacturer for cash? If on credit, at what credit? If bartered, for what?                                                                                                                                 | 22. Usually sold at a credit of from 6 to 8 months; none bartered.                                                                                                                |
| 23. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 23. Not materially varied in each year since the commencement of the establishment.                                                                                               |
| 24. The prices at which the manufacture has been sold by the manufacturer since the establishment?                                                                                                                                                     | 24. Answered in question 11.                                                                                                                                                      |
| 25. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                             | 25. The present rate of duties, provided we can realize the protection intended by the law.                                                                                       |
| 26. Is any change necessary in levying or collecting duties on such articles to prevent fraud?                                                                                                                                                         | 26. Yes; do away with the dollar minimum, and establish cash duties.                                                                                                              |
| 27. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                           | 27. This question cannot be answered.                                                                                                                                             |
| 28. What amount of the agricultural productions of the county is consumed in your establishment, and what amount of other domestic productions?                                                                                                        | 28. No correct means of answering this question justly.                                                                                                                           |
| 29. What quantity or amount of manufactures, such as you make, is produced in the United States, and what amount in this State?                                                                                                                        | 29. Not acquainted with those amounts.                                                                                                                                            |

## DOCUMENT 10.—No. 24—Continued.

| QUESTIONS.                                                                                                                                                                                               | ANSWERS.                                                                                          |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------|
| 30. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., would it cause you to abandon your business, or would you manufacture at reduced prices? | 30. We should abandon the business.                                                               |
| 31. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                           | 31. We should have in this to be governed by circumstances.                                       |
| 32. Is there any pursuit in which you could engage, from which you could derive greater profits, even after a reduction of the import duties to 12½ per cent.?                                           | 32. Yes.                                                                                          |
| 33. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of six per cent., and how gradual should the reduction be?                              | 33. The woollen business, with the present protecting duties, does not realize over six per cent. |
| 34. Average profit of money or capital in your county?                                                                                                                                                   | 34. Not over six per cent.                                                                        |
| 35. Average rate of wages in your county?                                                                                                                                                                | 35. Refer to the answer of question 16.                                                           |

## DOCUMENT 10.—No. 25.

*Domestic Cloth manufactured in Families in the State of New York, in the year 1834.*

|                                                                      |                     |
|----------------------------------------------------------------------|---------------------|
| Whole number of yards of fulled cloth,                               | - - - - - 2,918,233 |
| Whole number of yards of flannel and other woollen cloth not fulled, | - - - - - 3,468,001 |
| Whole number of yards of linen, cotton, or other thin cloths,        | - - - - - 8,079,992 |

There is no practicable mode of ascertaining the increase of manufactures in families since that year, excepting by inquiring of every family. The amounts above stated were procured in that way by the persons employed to take the census, under the laws of this State, in 1824; and the same information will be obtained in 1834.

This does not answer the query contained in the circular from the Treasury Department; but it is furnished under the impression that it may possibly serve as the basis of an estimate.

J. A. DIX.

## DOCUMENT 10.—No. 26.

*Manufactory of Jonathan Stott, situate in the city of Hudson, in the County of Columbia, in the State of New York, March, 1832.*

| QUESTIONS.                                                              | ANSWERS.                                       |
|-------------------------------------------------------------------------|------------------------------------------------|
| 1. By what power—water, steam, or what other?                           | 1. Water.                                      |
| 2. When established, and whether a joint stock concern?                 | 2. Established in 1828. An individual concern. |
| 3. Capital invested in ground and buildings, water power and machinery? | 3. Twenty-eight thousand dollars.              |

| QUESTIONS.                                                                                                                                                                                                                                             | ANSWERS.                                                                                                                                                                                                           |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4. Average amount in materials, in cash for the purchase of materials, and payment of wages?                                                                                                                                                           | 4. Fifty thousand dollars per year.                                                                                                                                                                                |
| 5. Annual rate of profit on the capital invested since the establishment of the manufactory?                                                                                                                                                           | 5. Ten per cent.                                                                                                                                                                                                   |
| 7. What has been the rate of profits annually for the last three years? If a joint stock company, what dividends have been received?                                                                                                                   | 7. Ten per cent.                                                                                                                                                                                                   |
| 9. Causes of the increase (or decrease) of profit at different periods of time?                                                                                                                                                                        | 9. Different causes; principally an over stock in market.                                                                                                                                                          |
| 10. Ratés of profit on capital otherwise employed in the same county and State?                                                                                                                                                                        | 10. None.                                                                                                                                                                                                          |
| 11. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                 | 11. Plannels, the only kind manufactured in the establishment, 38 cents the average per yard. About middle quality.                                                                                                |
| 12. Quantity and value of raw materials annually used, distinguishing between foreign and domestic products?                                                                                                                                           | 12. About thirty-eight thousand dollars. About one-third foreign.                                                                                                                                                  |
| 13. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                        | 13. When foreign articles of the same kind were imported, they sold for about 46 cents per yard. There has none of this quality been imported for the last two or three years, to the knowledge of the proprietor. |
| 14. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                      | 14. Twenty-one men at one dollar per day; fifteen women at fifty cents per day; eight boys at two dollars per week.                                                                                                |
| 15. How many hours a day employed, and what portion of the year?                                                                                                                                                                                       | 15. Eleven hours per day all the year.                                                                                                                                                                             |
| 17. Number of horses or other animals employed?                                                                                                                                                                                                        | 17. Three horses.                                                                                                                                                                                                  |
| 18. Whether the manufactures find a vent at the manufactory? If not, how far they are sent to a market?                                                                                                                                                | 18. Sent to New York.                                                                                                                                                                                              |
| 20. Where are the manufactures consumed?                                                                                                                                                                                                               | 20. All over the country.                                                                                                                                                                                          |
| 22. Whether the manufacture is sold by the manufacturer for cash? If on credit, at what credit? If bartered, for what?                                                                                                                                 | 22. A credit from six to eight months.                                                                                                                                                                             |
| 23. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 23. Since 1828 the article has decreased from 38 cents down to 28 cents in 1832. Materials has increased in and during the same time.                                                                              |
| 25. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                             | 25. Do not know.                                                                                                                                                                                                   |
| 26. Is any change necessary, in levying or collecting duties on such articles, to prevent fraud?                                                                                                                                                       | 26. None.                                                                                                                                                                                                          |
| 28. What amount of the agricultural productions of the county is consumed in your establishment, and what amount of other domestic productions?                                                                                                        | 28. Agricultural, twenty-six thousand dollars. Other domestic productions, twelve thousand dollars.                                                                                                                |

## DOCUMENT 10.—No. 26—Continued.

| QUESTIONS.                                                                                                                                                                                                | ANSWERS.                                                                     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------|
| 30. If the duty upon the foreign manufacture of the kind of goods which you make, were reduced to 12½ per cent., would it cause you to abandon your business, or would you manufacture at reduced prices? | 30. Should abandon the concern at the present price of wool in this country. |
| 31. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                            | 31. Do not know.                                                             |
| 32. Is there any pursuit in which you could engage, from which you could derive greater profits, even after a reduction of the import duties to 12½ per cent.?                                            | 32. Yes.                                                                     |
| 34. Average profit of money or capital in your county?                                                                                                                                                    | 34. Seven per cent.                                                          |

## DOCUMENT 10.—No. 27.

*Manufactory of Woollens, situate in the town of Sullivan, in the County of Madison, in the State of New York; March, 1832.*

| QUESTIONS.                                                                                                                                                             | ANSWERS.                                                                                                                                                                                                                                          |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. By what power—water, steam, or what other?                                                                                                                          | 1. Water power solely.                                                                                                                                                                                                                            |
| 2. When established; and whether a joint stock concern?                                                                                                                | 2. The buildings were erected, and business commenced in July, 1825. It is not a joint stock concern, but owned by an individual.                                                                                                                 |
| 3. Capital invested in ground and buildings, water power, and machinery?                                                                                               | 3. The buildings are of stone. The capital invested in buildings and machinery is about \$50,000.                                                                                                                                                 |
| 4. Average amount in materials, in cash for the purchase of materials, and payment of wages?                                                                           | 4. The amount of annual expenditure in labor and raw material, is now from 40 to 45,000 dollars, varying with the price of the raw material.                                                                                                      |
| 5. Annual rate of profit on the capital invested since the establishment of the manufactory?                                                                           | 5. From the year 1825 to 1830, there was a loss on operations. From July, 1830, to January 1, 1832, there has been a profit of ten per cent. on the capital.                                                                                      |
| 6. How much of the capital is borrowed, and what interest is paid on it?                                                                                               | 6. This question it is difficult to answer, because of the variation in the amount of floating capital required in active operations. The legal rate of interest in this State is seven per cent.                                                 |
| 7. What has been the rate of profits annually for the last three years? If a joint stock company, what dividends have been received?                                   | 7. The last two years the profits have been about ten per cent. annually; before that time, nothing.                                                                                                                                              |
| 8. What portion of the income of the company has been converted into fixed capital, or retained for contingent or other objects, and, therefore, not annually divided? | 8. The alterations in machinery, owing to continued improvements, form a large item of expenditure: but what portion has so invested, it is difficult to say. This last year, I suppose, about three of the ten per cent. has been thus expended. |

| QUESTIONS.                                                                                                                                    | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-----------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>9. Causes of the increase (or decrease) of profit at different periods of time?</p>                                                        | <p>9. In this country we have so much to say in answer to this question, that it is difficult to be sufficiently concise. Fluctuations in the price of raw materials, and in the policy of Government, are prominent causes of increase or decrease of profit. Indeed, a want of steady policy must always prove ruinous to any manufacturing business, whether of increase or decrease of protection. Prospective increase is an alluring bait for commercial gambling, proving, ultimately, injurious to the manufacturers and merchants. Prospective decrease must produce similar results.</p> |
| <p>10. Rates of profit on capital otherwise employed in the same county and State?</p>                                                        | <p>10. Whether the legal rate of interest in the State will answer this question or not, is uncertain. I cannot otherwise answer it.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <p>11. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?</p> | <p>11. About 15,000 yards of broadcloth, and 9,000 yards of kerseymere. Broadcloth will average about \$2 60 per yard, and the kerseymere \$1 25 per yard; which would make the income about \$9,000 or \$90,000 the whole capital employed—allowing 2½ commissions on sales, without any guarantee or insurance for credit.</p>                                                                                                                                                                                                                                                                   |
| <p>12. Quality and value of raw materials annually used, distinguishing between foreign and domestic products?</p>                            | <p>This year, in consequence of the fluctuation in the price of wool, the profit will probably be somewhat less.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <p>13. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?</p>                        | <p>12. About 50,000 pounds of wool, the product of the country, may be annually used in the factory with the present extent of machinery. The building is, however, sufficiently large for at least double the present machinery and labor employed. The value of wool has varied so much, that I cannot name any price in anticipation: this must depend upon the steadiness of the demand arising from the regularity of the manufacturing operations.</p>                                                                                                                                       |
| <p>14. Number of men, women, and children employed, and average wages of each class?</p>                                                      | <p>13. This question I am unable to answer, except by an examination of the relative policy of foreign Governments, and our own; the nature of the protection afforded abroad, and at home, in allowing a free introduction of raw material, &amp;c. &amp;c. If the protection has reference to the present cost in the United States, with the protection now afforded, I would say the average price above named, would probably be as correct an answer as can be given; competition at the place of sale keeping the domestic and foreign article at about the same price.</p>                 |
| <p>15. How many hours a day employed, and what portion of the year?</p>                                                                       | <p>14. Fifteen men, averaging about \$1 per day; twenty-three women, average about \$2 per week; eleven children, average about \$1 50 per week, each.</p> <p>15. They work the whole year, unless the factory shall be out of repair. They are employed about ten hours in each day.</p>                                                                                                                                                                                                                                                                                                          |

## DOCUMENT 10.—No. 37—Continued.

| QUESTIONS.                                                                                                                                                                                                                                             | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 16. Rate of wages of similar classes otherwise employed in the same State and county?                                                                                                                                                                  | 16. The ordinary wages of men for labor are about 62½ cents per day, supplying themselves, or \$10 per month, and provisions found by the employer. Women, as servants, about \$1 per week, and provisions found. Children cannot otherwise be advantageously employed, and can get no wages.                                                                                                                                                                                                                                                                                                                                             |
| 17. Number of horses or other animals employed?                                                                                                                                                                                                        | 17. Two horses only are employed, and those are not absolutely necessary.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 18. Whether the manufactures find a vent at the manufactory? If not, how far they are sent to market?                                                                                                                                                  | 18. About one-fourth of the manufactured articles have been sold at the factory, and the remainder sent to New York to market.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 19. Whether foreign articles of the like kind enter into competition with them at such place of sale, and to what extent?                                                                                                                              | 19. Foreign articles interfere with them, both at the factory and in New York, and to an extent far beyond what could be anticipated from apparent ability for competition at such place of sale. It must be observed, that the foreign manufacturer has his home market free from all, except domestic competition. He may give a long credit to his foreign customer, who obtains also a long credit on the duty in this country, and gambles for years, while wholly insolvent, staking nothing against the labor and capital of the manufacturer here. Frauds on the revenue constitute another cause for the support of competition. |
| 20. Where are the manufactures consumed?                                                                                                                                                                                                               | 20. These manufactures are consumed most probably altogether in the U. States.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 21. Whether any of the manufactures are exported to foreign countries? If so, where?                                                                                                                                                                   | 21. This is included in the preceding answer.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 22. Whether the manufacture is sold by the manufacturer for cash? If on credit, at what credit? If bartered, for what?                                                                                                                                 | 22. The manufacture is sold on a credit of six months. A portion is bartered at the factory for wool principally.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 23. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 23. The cost of the manufactured article has varied within the last three years, from several causes. The price of the raw material has been much increased. The progressive improvement in machinery, and the additional skill of the labor, has reduced the cost of labor in manufacturing. The increased price of the raw material has been equal to 30 per cent., and the improvement in machinery and labor is equal to 20 per cent.                                                                                                                                                                                                 |
| 24. The prices at which the manufacture has been sold by the manufacturer since the establishment?                                                                                                                                                     | 24. The manufactured article was at a very reduced price up to the year 1830, first, owing to want of sufficient protection, and then to an excessive importation, in consequence of the prospective duty.                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 25. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                             | 25. This question is one that I cannot answer. It has been so fully examined by those extensively engaged in manufacturing operations, that I shall not attempt it.                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 26. Is any change necessary in levying or collecting duties on such articles to prevent fraud?                                                                                                                                                         | 26. This also has been fully examined by those who have given the subject more attention than I have.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| QUESTIONS.                                                                                                                                                                                                                              | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>27. What portion of the cost of your manufactures consists of the price of the raw material; what portion of the wages of labor, and what portion of the profits of capital?</p>                                                     | <p>27. The cost of the raw material is about two-thirds of the cost of the manufactured article, and the labor one-third. The profit depends on the price of the article in market, which I have before estimated at about ten per cent. on the capital. I do not, in my computation of cost, add any thing for profit or interest on capital.</p>                                           |
| <p>28. What amount of the agricultural productions of the county is consumed in your establishment, and what amount of other domestic productions?</p>                                                                                  | <p>28. The whole quantity of wool consumed, together with most articles requisite for the support of the hands employed. Dye stuffs and oil are imported.</p>                                                                                                                                                                                                                                |
| <p>29. What quantity or amount of manufactures, such as you make, is produced in the United States, and what amount in this State?</p>                                                                                                  | <p>29. This question I am unable to answer.</p>                                                                                                                                                                                                                                                                                                                                              |
| <p>30. If the duty upon the foreign manufacture of the kind of goods which you make, were reduced to <math>12\frac{1}{2}</math> per cent., would it cause you to abandon your business, or would you manufacture at reduced prices?</p> | <p>30. It would be utterly impossible, in the present state of things, to sustain the operations if such reduction should take place. The answer to this question, with the additional part, is contained in a note marked A.</p>                                                                                                                                                            |
| <p>31. If it would cause you to abandon your business, in what way would you employ your capital?</p>                                                                                                                                   | <p>31. The capital invested in buildings and machinery cannot be recalled, but must be lost if the business should be abandoned.</p>                                                                                                                                                                                                                                                         |
| <p>32. Is there any pursuit in which you could engage, from which you could derive greater profits, even after a reduction of the import duties to <math>12\frac{1}{2}</math> per cent.?</p>                                            | <p>32. There would be no profit or even safety attending the business, and the whole amount invested in buildings and machinery must be abandoned as a total loss.</p>                                                                                                                                                                                                                       |
| <p>33. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent., and how gradual should the reduction be?</p>                                                        | <p>33. Competition will soon reduce the profit to the lowest amount for which the article can be afforded without a reduction of duty. The great attention paid to rearing sheep, will, in a short time, furnish wool in abundance; and the increased manufacturing population will induce the investment of sufficient capital to reduce profit to as low a sum as will invite capital.</p> |
| <p>34. Average profit of money or capital in your county?</p>                                                                                                                                                                           | <p>34. This question has been before answered. The interest of seven per cent. is the fair price of money, and probably the fair profit of capital.</p>                                                                                                                                                                                                                                      |
| <p>35. Average rate of wages in your county?</p>                                                                                                                                                                                        | <p>35. Men <math>62\frac{1}{2}</math> cents per day, supporting themselves, or 10 dollars per month, and fed by the employer. Women, 1 dollar per week, and found.</p>                                                                                                                                                                                                                       |

*Note A, to Question 30.*—If the duty upon the foreign manufacture, of the kind of goods which you make, were reduced to  $12\frac{1}{2}$  per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you manufacture at reduced prices?

The substance of the answer I have given to this, without the addition, is, that we could not continue our manufacturing operations at all, but would be broken down irretrievably. The present addition to the question, "with corresponding reduction on all the imports," carries with it a wider range of inquiry, but must terminate in the same result at the present time. A naked opinion, on such an important question of policy, must either receive its weight from the high commercial, and candid character of the individual giving it, or will justly be regarded as if never uttered, merely useless. To reason on it, at length, is im-

## DOCUMENT 10.—No. 27—Continued.

possible, with justice to the subject, in this way. If your question means a "corresponding" ratio of reduction, so as to keep the objects acted on still proportionably distant, it would present a subject very difficult to be adjusted, and then we must examine the relative prices of the articles we consume, and those we furnish, with reference to such alteration, together with the very important and controlling consideration, the relative strength derived from capital, and the price for its use, compared with that abroad; also the proper measures for its introduction and regular increase, and consequent decrease of price for its use.

The other questions proposed by General Dix, to be answered, are—"1st. Is any change necessary, in levying and collecting the duty on imported woollens, to prevent fraud? 2d. If minimums should be abolished, and the duty assessed upon the actual value of the imported article in the American port, what rate of ad valorem duty would be equivalent to the present with the minimum? 3d. What would be the operation of this change upon the frauds at present supposed to be practised? 4th. Extent of individual and household manufacture in Madison county, and how much it has increased since the tariff of 1824? 5th. Do the persons employed at your manufactory board themselves, and what do they pay per week?" The three first questions requiring answers, expressive of our opinion on policy, founded on information possessed by others more fully than I have, will prevent my answering in detail. The relative value of minimum and ad valorem duty as a mean of protection, and a measure of justice, has been also fully discussed, and is well understood. There are difficulties attending both, and most political men have reason sufficient to prefer one or the other mode, as they have been led by inclination, without perhaps being fully aware of the power by which the judgment was controlled. The law of minimums must necessarily operate very unequally. The inequality of the burden is increased in proportion as the standard is approximated by the value of the article at the place of origin or production. The law can, however, probably be more easily enforced, and there is less danger of corruption and fraud than by an ad valorem duty. An ad valorem duty, depending on invoice, is wholly out of Government control, and liable to unavoidable frauds. An ad valorem duty, depending on appraisement at the place of importation, would probably lead to the most demoralizing and extensive corruption.

I have not accurate information sufficient to answer your fourth question.

To the fifth, I answer, that all persons in my factory board themselves, and pay from one dollar to one dollar and twenty-five cents per week board.

J. B. YATES.

Mr. Yates was formerly a member of Congress from Schenectady county, and is a highly intelligent and respectable man. His statement is entitled to entire credit.

J. A. DIX.

*The Oriskany Manufactory of Cloths and Cassimeres, situate in the town of Whitestown, in the County of Oneida, in the State of New York, March, 1832.*

| QUESTIONS.                                                              | ANSWERS.                                                                                                                                                                                                           |
|-------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. By what power—water, steam, or what other?                           | 1. Exclusively water power.                                                                                                                                                                                        |
| 2. When established, and whether a joint stock concern?                 | 2. Established in 1811. Incorporated in that year, with the usual privileges.                                                                                                                                      |
| 3. Capital invested in ground and buildings, water power and machinery? | 3. Capital, \$200,000, divided into 2,000 shares of \$100 each. One-half of this sum has been paid on 1,647 shares. The capital paid in is somewhat more than \$90,000, as the forfeited stock was partly paid up. |

| QUESTIONS.                                                                                                                                                           | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                      |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4. Average amount in materials, in cash for the purchase of materials, and payment of wages?                                                                         | 4. I cannot be accurate as to the average amount. The average amount paid in 1831 for wool, was about \$80,000; for wages, \$18,500; for fuel, \$825; flour, 250 barrels, say \$1,500; olive oil, 2,800 dollars; sperm oil, \$500; dye stuffs, \$2,200; soft soap, \$1,350; chamber ley, \$325; hard soap, \$500; teazles, \$975; amounting, including many articles not named, to \$111,610. |
| 5. Annual rate of profit on the capital invested since the establishment of the manufactory?                                                                         | 5. There has been no annual rate of profits. This company has been very unfortunate, indeed. The last sales of stock were made at \$5 per share. On each share there had then been paid, \$44 50. Judge A. Spencer, P. S. Parker, and Francis Boodgood, three of our largest stockholders, all sold at that price.                                                                            |
| 6. How much of the capital is borrowed, and what interest is paid on it?                                                                                             | 6. The company borrow money generally, to purchase wool, of the banks at Utica. They borrowed upwards of \$40,000 for that purpose last summer, at 6 per cent. interest.                                                                                                                                                                                                                      |
| 7. What has been the rate of profits annually for the last three years? If a joint stock company, what dividends have been received?                                 | 7. In 1829 the company lost money. In 1831 a profit to the amount of about \$20,000 was made. Both cloths and wool advanced greatly on our hands. In June, 1830, we purchased about 100,000 lbs. of wool, which advanced 12 to 15 cents per pound. Our business for 1831 is not yet closed, and we have about \$30,000 worth of goods ice-bound in Albany, made from dear wool.               |
| 8. What portion of the income of the company has been converted into fixed capital, or retained for contingent or other objects, and therefore not annually divided? | 8. This question would seem to have been answered by the answer to No. 5. We did make improvements, however, in 1830, and some in 1831, instead of paying our debts. No part of our profits were used in any other way. They could not have been divided, as our original capital is more than one-half sunk.                                                                                 |
| 9. Causes of the increase (or decrease) of profit at different periods of time?                                                                                      | 9. There never was any profit, except in 1830, and perhaps in 1831; because the business was very bad, with too much competition, both foreign and domestic.                                                                                                                                                                                                                                  |
| 10. Rates of profit on capital otherwise employed in the same county and State?                                                                                      | 10. I cannot give a satisfactory answer to this question. I should suppose that the rates of profit would vary from 6 to 10 per ct.                                                                                                                                                                                                                                                           |
| 11. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                               | 11. This question I cannot answer, as my predecessors left no data on which I can make the estimates.                                                                                                                                                                                                                                                                                         |

## QUESTIONS.

12. Quantity and value of raw materials annually used, distinguishing between foreign and domestic products?

13. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?

14. Number of men, women, and children, employed, and average wages of each class?

15. How many hours a day employed, and what portion of the year?

16. Rate of wages of similar classes otherwise employed in the same State and county?

17. Number of horses or other animals employed?

18. Whether the manufactures find a vent at the manufactory? If not, how far they are sent to a market?

## ANSWERS.

12. We annually consume about 120,000 pounds of wool; 4,000 pounds of milk-weed; 3,000 pounds quercitron, weld, and other dyes of domestic growth, exclusive of copperas. We now use about 3,000 pounds American copperas; 1,100 pounds glue and pates, besides the other materials mentioned in answer to No. 4. Of foreign materials, say 2 cases indigo; 5 or 6 barrels of madder; 8 or 900 pounds tartar, &c.; 3,000 gallons olive oil, and about 500 gallons sperm oil; about 3 tons of iron and steel nails; 60 tons logwood, fustic, and other foreign dyes, &c. Amount of domestic products, about 140,000 pounds, value about \$95,000; of foreign articles, 63 tons, value about \$6,000.

13. We manufacture broadcloth and kerseymeres. Such cloths as we chiefly manufacture, would cost the importer about \$2 75, if the duties were fairly paid. Our goods brought us that price in October. In December, we sold at \$2 50, and now at \$2 25. Similar goods are imported from England, France, and Germany, as I believe. These cloths are worth about 7s. to 8s. 6d. sterling, running measure, in England.

14. We have 14 boys in our employ, under 16 years of age; 17 between 16 and 21 years; 42 who are over 21 years; in all, 73 males. We have 18 girls under 16, and 56 females upwards of 16 years of age; in all, 74 females; total, 147 persons. The wages of the girls, under 16, will average about \$1 50 per week; the wages of the other females, (mostly weavers,) is not less than \$2 50 per week; the wages of boys, under 16, average \$1 75; from 16 to 21, average wages, \$3 25; men's wages average from 70 to 75 cents per day; board of females and boys, \$1 per week; men, \$1 50, paid by themselves.

15. The hands are employed 12 hours each day, and we work every week day, except about four days in the year.

16. I believe that able bodied men obtain about \$120 per annum; full grown girls generally receive about \$1 per week for doing house work. In these cases they are boarded. Our hands board themselves. Children, under 16, cannot obtain wages; their board and washing is generally considered of about as much value as their labor.

17. Two horses.

18. We generally sell to the merchants of the vicinity, a market for about \$20,000 worth of goods; and we exchange about \$10,000 worth in payment for wool, and other materials, and for labor. The residue are sent to New York principally.

| QUESTIONS.                                                                                                                                                                                                                                             | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 19. Whether foreign articles of the like kind enter into competition with them at such place of sale, and to what extent?                                                                                                                              | 19. Foreign cloths, of nearly similar kind, do enter into competition with them in New York.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 20. Where are the manufactures consumed?                                                                                                                                                                                                               | 20. In every part of the United States probably.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 21. Whether any of the manufactures are exported to foreign countries? If so, where?                                                                                                                                                                   | 21. I do not believe that any of our goods were ever exported.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 22. Whether the manufacture is sold by the manufacturer for cash? If on credit, at what credit? If bartered, for what?                                                                                                                                 | 22. Our goods are mostly sold by a commission house in New York, on a credit of eight months; sales guaranteed. A part, say \$5,000 worth, are bartered for wool, and about an equal sum for wood, soap, labor, &c. &c.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 23. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 23. The cost of manufactures has greatly decreased. The same goods that now pay us a small profit, at \$2 25, cost us \$3 50 in 1820, and at least \$7 in 1811, '12, '13, and '14. In 1814 our wool cost us, on an average, \$1 15 seventh-tenths per pound. In 1827, only 31 cents. In 1831, about 67 cts. I cannot say what the progressive increase or decrease may have been, as I have not the requisite data on which to found an estimate; undoubtedly the cost has greatly lessened, in consequence of the improvements in machinery.                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 24. The prices at which the manufacture has been sold by the manufacturer since the establishment?                                                                                                                                                     | 24. In 1812 our cloths readily brought us 8 to 10 dollars per yard; in 1813, \$12; in 1814, \$12; in 1815, \$7 to \$9; 1816, '17, \$3 to \$4; in 1818, \$3 10 to \$3 40; in 1819, cloths brought \$3 to \$4 25; cassimeres \$1 55 to \$1 65; 1822, cloths \$3 to \$3 50; cassimeres \$1 40 to \$1 70; 1823, cloths \$2 80 to \$3 15; cassimeres \$1 10 to \$1 45; 1824, cloths \$3 to \$3 1/2; cassimeres \$1 1/2 to \$1 1/2; 1825, cloths \$2 1/2 to 3 1/2; 1826, \$2 to \$3 for cloths; 85 cents to \$1 75 for cassimeres; 1827, \$2 25 to \$3 75 for cloths; 90 to 14 cts. for cassimeres; 1828, cloths \$1 75 to \$3 40; cassimeres 80 to 115 cts.; 1829, cloth \$1 45 to \$3; cassimeres 62 cts. to \$1 05; 1830, \$1 60 to \$3 25 for cloths; 70 cts. to \$1 10 for cassimeres; 1831, cloths \$2 25 to \$3 75; cassimeres \$1 10 to \$2. We make two qualities of cloths and cassimeres; the lowest price is handsome and strong, the other descriptions, superfine, and in less quantity. |
| 25. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                             | 25. In case the raw material could be obtained here as cheap as it is obtained by the European manufacturer, a duty of 40 per cent. ad valorem honestly paid, would be an abundant protection, and much more than we now receive, in my opinion. I am not certain but a duty of 30 per cent. would be a protection ultimately, if fairly paid, and stock should be as low here as abroad. The benefits of the tariff of 1828, so far as wool and woollens are concerned, has only been to the wool-grower as yet.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

## DOCUMENT 10.—No. 28—Continued.

| QUESTIONS.                                                                                                                                                                                                      | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                            |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>26. Is any change necessary in levying or collecting duties on such articles to prevent fraud?</p>                                                                                                           | <p>26. I have no doubt that the laws may be more rigidly enforced in New York than they have been; but, were I competent to suggest a feasible plan, I have not space here.</p>                                                                                                                                                                                                                                     |
| <p>27. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?</p>                             | <p>27. In our business, the cost of the materials used in manufacture have constituted about two-thirds, and the cost of labor something over one-third, say two-fifths; thus running us in debt every year until 1830 and 1831. In 1830, the cost of materials was about 50 per cent., labor 30 per cent., and profit 20 per cent.; from which was to be deducted wear and tear, 8 per cent.</p>                   |
| <p>28. What amount of the agricultural productions of the county is consumed in your establishment, and what amount of other domestic productions?</p>                                                          | <p>28. Probably we consume about 30,000 dollars of the productions of this county, and about \$65,000 of produce from other parts of the United States. Accuracy cannot be attained in this case.</p>                                                                                                                                                                                                               |
| <p>29. What quantity or amount of manufactures, such as you make, is produced in the United States, and what amount in this State?</p>                                                                          | <p>29. To this question I can give no answer on which much reliance can be placed.</p>                                                                                                                                                                                                                                                                                                                              |
| <p>30. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent.; would it cause you to abandon your business, or would you manufacture at reduced prices?</p> | <p>30. I do not hesitate to say we should be compelled to abandon the business at once.</p>                                                                                                                                                                                                                                                                                                                         |
| <p>31. If it would cause you to abandon your business, in what way would you employ your capital?</p>                                                                                                           | <p>31. As this company possesses no capital, not invested in buildings and machinery, and have not personal property enough to pay the corporate debts, the question does not admit of an answer.</p>                                                                                                                                                                                                               |
| <p>32. Is there any pursuit in which you could engage, from which you could derive greater profits, even after a reduction of the import duties to 12½ per cent.?</p>                                           | <p>32. The cotton manufacturing business is incomparably better than this now. I should endeavor, therefore, to obtain cotton machinery in place of the woollen; there could not be any profit, but would necessarily be a great loss were the duties thus reduced. Even should the raw material fall very low, such a flood of foreign goods would be introduced, that we should abandon the business at once.</p> |
| <p>33. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent., and how gradual should the reduction be?</p>                                | <p>33. I am quite certain that the duty cannot be safely lessened on any description of woollens, unless a corresponding reduction is made in the duty on olive oil, wool, indigo, &amp;c.</p>                                                                                                                                                                                                                      |
| <p>34. Average profit of money or capital in your county?</p>                                                                                                                                                   | <p>34. Probably from six to 10 per cent.</p>                                                                                                                                                                                                                                                                                                                                                                        |
| <p>35. Average rate of wages in your county?</p>                                                                                                                                                                | <p>35. Laboring men, 120 dollars per annum; women, 1 dollar per week, and found.</p>                                                                                                                                                                                                                                                                                                                                |

S. NEWTON DEXTER,  
*Agent of the Oriskany Manufacturing Company.*

ORISKANY, March 20, 1832.

This statement is made by Mr. S. Newton Dexter, who is well known to many members of Congress, and probably to the department.

J. A. DIX.

## DOCUMENT 10.—No. 29.

*Manufactory of Wool, situate in the town of Brownville, in the County of Jefferson, in the State of New York, March, 1832.*

| QUESTIONS.                                                                                                                                                                                                                                             | ANSWERS.                                                                           |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------|
| 1. By what power—water, steam, or what other?                                                                                                                                                                                                          | 1. Water power.                                                                    |
| 2. When established, and whether a joint stock concern?                                                                                                                                                                                                | 2. In 1824. Joint stock.                                                           |
| 3. Capital invested in ground and buildings, water power and machinery?                                                                                                                                                                                | 3. Ten thousand dollars.                                                           |
| 4. Average amount in materials, in cash for the purchase of materials, and payment of wages?                                                                                                                                                           | 4. About 5,400 dollars.                                                            |
| 5. Annual rate of profit on the capital invested since the establishment of the manufactory?                                                                                                                                                           | 5. Less than legal interest.                                                       |
| 6. How much of the capital is borrowed, and what interest is paid on it?                                                                                                                                                                               | 6. Three thousand dollars, at 7 per cent.                                          |
| 7. What has been the rate of profits annually for the last three years? If a joint stock company, what dividends have been received?                                                                                                                   | 7. No. 5.                                                                          |
| 8. What portion of the income of the company has been converted into fixed capital, or retained for contingent or other objects, and therefore not annually divided?                                                                                   | 8. A small portion.                                                                |
| 9. Causes of the increase (or decrease) of profits at different periods of time?                                                                                                                                                                       | 9. Fluctuation in price of material.                                               |
| 11. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                 | 11. 5,000 yards satinets, 75 cents, \$3,750. Besides about \$4,000 of custom work. |
| 12. Quantity and value of raw materials annually used, distinguishing between foreign and domestic products?                                                                                                                                           | 12. Wool and cotton and oil \$2,600<br>Dye-stuffs and other foreign products 400   |
| 14. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                      | 14. 10 men; average wages \$20 per month.                                          |
| 15. How many hours a day employed, and what portion of the year?                                                                                                                                                                                       | 15. 12 hours.                                                                      |
| 16. Rate of wages of similar classes otherwise employed in the same State and county?                                                                                                                                                                  | 16. About \$ 16.                                                                   |
| 17. Number of horses or other animals employed?                                                                                                                                                                                                        | 17. Four horses.                                                                   |
| 18. Whether the manufactures find a vent at the manufactory? If not, how far they are sent to a market?                                                                                                                                                | 18. Principally at the manufactory. Part are sent to New York.                     |
| 20. Where are the manufactures consumed?                                                                                                                                                                                                               | 20. Principally in the county.                                                     |
| 22. Whether the manufacture is sold by the manufacturer for cash? If on credit, at what credit? If bartered, for what?                                                                                                                                 | 22. Some cash; a good deal bartered for agricultural products.                     |
| 23. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 23. Increased last year from the high price of wool.                               |
| 24. The prices at which the manufacture has been sold by the manufacturer since the establishment?                                                                                                                                                     | 24. Prices have not varied essentially.                                            |

## DOCUMENT 10.—No. 29—Continued.

| QUESTIONS.                                                                                                                                                                                               | ANSWERS.                                                                                                  |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------|
| 27. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                             | 27. Of a yard of satinete, 50 cents for materials, 18 cents for wages, 7 cents profits and wear and tear. |
| 28. What amount of the agricultural productions of the county is consumed in your establishment, and what amount of other domestic productions?                                                          | 28. About \$2,000 of agricultural produce.                                                                |
| 30. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., would it cause you to abandon your business, or would you manufacture at reduced prices? | 30. We could not go on.                                                                                   |
| 31. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                           | 31. It would be a total loss.                                                                             |
| 32. Is there any pursuit in which you could engage, from which you could derive greater profits, even after a reduction of the import duties to 12½ per cent?                                            | 32. Almost any other business.                                                                            |
| 33. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent., and how gradual should the reduction be?                                | 33. The business will bear no reduction.                                                                  |

BROWNVILLE, March 21, 1832.

DRAKE &amp; STACY.

| QUESTIONS.                                                                                   | ANSWERS.                                                                                                                                                                                                                                                                                                                   |
|----------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. By what power—water, steam, or what other?                                                | 1. Water power.                                                                                                                                                                                                                                                                                                            |
| 2. When established; and whether a joint stock concern?                                      | 2. In 1823. Individual concern.                                                                                                                                                                                                                                                                                            |
| 3. Capital invested in ground and buildings, water power and machinery?                      | 3. Twen'y-five thousand dollars, or more.                                                                                                                                                                                                                                                                                  |
| 4. Average amount in materials, in cash for the purchase of materials, and payment of wages? | 4. Say twelve thousand dollars.                                                                                                                                                                                                                                                                                            |
| 5. Annual rate of profit on the capital invested since the establishment of the manufactory. | 5. Hard to say; some years the profit has been 10 to 15 per cent.; some others, with same economy, there has been a loss of 6 to 8 per cent. Market having been governed by foreign goods and influence and fraudulent entries, the business has been altogether the most uncertain and fluctuating business of any other. |
| 6. How much of the capital is borrowed, and what interest is paid on it?                     | 6. About \$8,000, at 7 per cent.                                                                                                                                                                                                                                                                                           |

| QUESTIONS.                                                                                                                                                                                                                                             | ANSWERS.                                                                                                                                                                                                                                                                                                          |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7. What has been the rate of profits annually for the last three years? If a joint stock company, what dividends have been received?                                                                                                                   | 7. In 1829 profits were from 8 to 10 per cent.; in 1830 losing business with me; in 1831 closes up about even.                                                                                                                                                                                                    |
| 8. What portion of the income of the company has been converted into fixed capital, or retained for contingent or other objects, and therefore not annually divided?                                                                                   | 8. All the profits have been expended in machinery and real property attached to the mill.                                                                                                                                                                                                                        |
| 9. Causes of the increase (or decrease) of profit at different periods of time?                                                                                                                                                                        | 9. Over-importations and fraudulent entries.                                                                                                                                                                                                                                                                      |
| 10. Rates of profit on capital otherwise employed in the same county and State?                                                                                                                                                                        | 10. Not easy told.                                                                                                                                                                                                                                                                                                |
| 11. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                 | 11. Now manufacturing about 35,000 yards per year, cassimere, satinets, and flannels, worth last year, on an average, satinets 5 shillings, cassimeres \$1, flannels 28 cents.                                                                                                                                    |
| 12. Quantity and value of raw materials annually used, distinguishing between foreign and domestic products?                                                                                                                                           | 12. Twenty thousand pounds of wool, all American, average market value, last year, sixty cents.                                                                                                                                                                                                                   |
| 14. Number of men, women and children employed, and average wages of each class?                                                                                                                                                                       | 14. Twenty-three men, including machine shop, average wages one dollar per day; sixteen girls, average wages thirty-eight cents per day; four children at 25 cents per day.                                                                                                                                       |
| 15. How many hours a day employed, and what portion of the year?                                                                                                                                                                                       | 15. About twelve hours per day, and the whole year.                                                                                                                                                                                                                                                               |
| 16. Rate of wages of similar classes otherwise employed in the same State and county?                                                                                                                                                                  | 16. Men in mechanical business generally about the same, some higher. Girls about the same.                                                                                                                                                                                                                       |
| 17. Number of horses or other animals employed?                                                                                                                                                                                                        | 17. Six horses.                                                                                                                                                                                                                                                                                                   |
| 18. Whether the manufactures find a vent at the manufactory? If not, how far they are sent to a market?                                                                                                                                                | 18. Sent three hundred miles.                                                                                                                                                                                                                                                                                     |
| 19. Whether foreign articles of the like kind enter into competition with them at such place of sale?                                                                                                                                                  | 19. They do.                                                                                                                                                                                                                                                                                                      |
| 20. Where are the manufactures consumed?                                                                                                                                                                                                               | 20. In the United States.                                                                                                                                                                                                                                                                                         |
| 21. Whether any of the manufactures are exported to foreign countries? If so, where?                                                                                                                                                                   | 21. Not any of them exported.                                                                                                                                                                                                                                                                                     |
| 22. Whether the manufacture is sold by the manufacturer for cash? If on credit, at what credit? If bartered, for what?                                                                                                                                 | 22. Generally at eight months' credit.                                                                                                                                                                                                                                                                            |
| 23. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 23. The cost of the manufactured article to the manufacturer has increased for two years past very materially; the increased cost has been wholly caused by the great advance in price of wool.                                                                                                                   |
| 24. The prices at which the manufacture has been sold by the manufacturer since the establishment?                                                                                                                                                     | 24. Difficult to answer correctly; price has always been upon the wing; there has been a difference of one hundred per cent. some years from others since the establishment has been in operation.                                                                                                                |
| 25. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                             | 25. Cannot say; but the rate of duty is, perhaps, not so essential as that it should be strictly collected upon all the goods entered, as fraudulent entries keep the market constantly in an unsettled state, and the manufacturer is left in uncertainty whether he is to make or lose money by his operations. |

| QUESTIONS.                                                                                                                                                                                                            | ANSWERS.                                                                                                                                                                                                                                                                                                    |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 26. Is any change necessary in levying or collecting duties on such articles to prevent fraud?                                                                                                                        | 26. Better answered by the collecting officers of custom: something is evidently necessary, either law or vigilance, to enforce the present, so as to prevent the tremendous frauds committed and committing upon the revenue.                                                                              |
| 27. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                          | 27. At the present time $\frac{1}{2}$ raw materials, 5-16 labor, 1-16 profit, after deducting repairs, wear and tear of machinery, and decay of buildings, which, in woollen business, is a heavy item.                                                                                                     |
| 28. What amount of the agricultural productions of the county is consumed in your establishment, and what amount of other domestic productions?                                                                       | 28. Agricultural products, except wool, two thousand dollars; other domestic productions say two thousand five hundred dollars.                                                                                                                                                                             |
| 29. What quantity or amount of manufactures, such as you make, is produced in the United States, and what amount in this State?                                                                                       | 29. Cannot say.                                                                                                                                                                                                                                                                                             |
| 30. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12 $\frac{1}{2}$ per cent., would it cause you to abandon your business, or would you manufacture at reduced prices? | 30. It would cause an abandonment at once.                                                                                                                                                                                                                                                                  |
| 31. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                        | 31. Capital being invested in machinery and buildings, which are unfit for other uses, consequently would be unavailable and would be almost a total loss.                                                                                                                                                  |
| 32. Is there any pursuit in which you could engage, from which you could derive greater profits, even after a reduction of the import duties to 12 $\frac{1}{2}$ per cent.?                                           | 32. There would be, unquestionably, a heavy loss in manufacturing if the imposts were reduced to 12 $\frac{1}{2}$ per cent.; if I had my capital out of the woollen business, I would invest it in almost any kind of business the country presents in preference to the woollen business as it now stands. |
| 33. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent., and how gradual should the reduction be?                                             | 33. The capital employed in the woollen business does not now yield a net profit of six per cent., after deducting repairs, wear and tear of machinery, and decay of buildings.                                                                                                                             |
| 34. Average profit of money or capital in your county?                                                                                                                                                                | 34. Cannot say; probably from six to ten per cent.                                                                                                                                                                                                                                                          |
| 35. Average rate of wages in your county?                                                                                                                                                                             | 35. Mechanics one dollar per day, farmers seventy-five cents.                                                                                                                                                                                                                                               |

WATERTOWN, March 24, 1832.

L. KIMBALL.

## DOCUMENT 10.—No. 31.

*Manufactory of Indian Blankets, situate in the town of Buffalo, in the County of Erie, in the State of New York, March, 1832.*

| QUESTIONS.                                                                                                                                                             | ANSWERS.                                                                                                                                                                                                                                                           |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. By what power—water, steam, or what other?                                                                                                                          | 1. Water.                                                                                                                                                                                                                                                          |
| 2. When established; and whether a joint stock concern?                                                                                                                | 2. Established 1830. Incorporated company.                                                                                                                                                                                                                         |
| 3. Capital invested in ground and building, water power and machinery?                                                                                                 | 3. Ten thousand dollars.                                                                                                                                                                                                                                           |
| 4. Average amount in materials, in cash for the purchase of materials and payment of wages?                                                                            | 4. Twelve thousand dollars per annum.                                                                                                                                                                                                                              |
| 5. Annual rate of profit on the capital invested since the establishment of the manufactory?                                                                           | 5. It being a new concern, could not say.                                                                                                                                                                                                                          |
| 6. How much of the capital is borrowed, and what interest is paid on it?                                                                                               | 6. From \$2,000 to \$4,000; generally seven per cent. interest.                                                                                                                                                                                                    |
| 7. What has been the rate of profits annually for the last three years? If a joint stock company, what dividends have been received?                                   | 7. No dividends as yet; probably owing to the high price of coarse wool, which is used in the manufacture of our kind of goods.                                                                                                                                    |
| 8. What portion of the income of the company has been converted into fixed capital, or retained for contingent or other objects, and, therefore, not annually divided? | 8. Trifling portion, if any.                                                                                                                                                                                                                                       |
| 9. Causes of the increase (or decrease) of profit at different periods of time?                                                                                        | 9. Explained in No. 7.                                                                                                                                                                                                                                             |
| 10. Rates of profit on capital otherwise employed in the same county and State?                                                                                        | 10. Various; probably from six to 50 per cent. per annum. The question is understood to relate to other kinds of business than manufacturing.                                                                                                                      |
| 11. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                 | 11. A new concern, about \$18,000. Blankets, quality said to be fully equal to the British Whitney or 3 point Indian blankets, for which they are a substitute; value about \$6 per pair.                                                                          |
| 12. Quantity and value of raw materials annually used, distinguishing between foreign and domestic products?                                                           | 12. 30,000 lbs. wool, about \$9,000 worth, or rising. The prices since the tariff of 1828, about equal. Before the tariff of 1828 the foreign wool, suitable for the manufacture of our kind of goods, could be obtained for about one half of the present prices. |
| 13. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                        | 13. Similar articles (blankets) \$6 per pair, frequently \$6 50 to \$7 per pair, imported from England.                                                                                                                                                            |
| 14. Number of men, women, and children employed, and average wages of each class?                                                                                      | 14. Six men, average wages 90 cents per diem; eight women, average wages 48 cents per day.                                                                                                                                                                         |
| 15. How many hours a day employed, and what portion of the year?                                                                                                       | 15. Twelve hours on an average, or nearly, the year through.                                                                                                                                                                                                       |
| 16. Rate of wages of similar classes otherwise employed in the same State and county?                                                                                  | 16. The men would probably receive about the same wages at other employments; the women about two-thirds as much.                                                                                                                                                  |
| 17. Number of horses or other animals employed?                                                                                                                        | 17. None.                                                                                                                                                                                                                                                          |
| 18. Whether the manufactures find a vent at the manufactory? If not, how far they are sent to a market?                                                                | 18. A moiety at home; the rest sent to New York, Philadelphia, Detroit, &c. from three hundred to six hundred miles.                                                                                                                                               |
| 19. Whether foreign articles of the like kind enter into competition with them at such place of sale?                                                                  | 19. Articles of similar kind of foreign manufacture compete with us at each of the above places of sale.                                                                                                                                                           |

## DOCUMENT 10.—No. 31—Continued.

| QUESTIONS.                                                                                                                                                                                                                                             | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                  |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 20. Where are the manufactures consumed?                                                                                                                                                                                                               | 20. Generally among the different tribes of Indians, some for the United States' Government for the army.                                                                                                                                                                                                                                                                 |
| 21. Whether any of the manufactures are exported to foreign countries? If so, where?                                                                                                                                                                   | 21. None exported.                                                                                                                                                                                                                                                                                                                                                        |
| 22. Whether the manufacture is sold by the manufacturer for cash? If on credit, at what credit? If bartered, for what?                                                                                                                                 | 22. Generally on a credit of six months.                                                                                                                                                                                                                                                                                                                                  |
| 23. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 23. Statu quo, the price of wool arose to its present high state about the time the factory went into operation, 1830. (Since we commenced in 1830.)                                                                                                                                                                                                                      |
| 24. The prices at which the manufacture has been sold by the manufacturer since the establishment?                                                                                                                                                     | 24. From \$5 50 per pair to \$6 00.                                                                                                                                                                                                                                                                                                                                       |
| 25. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                             | 25. Not any protection, but from the flood of capital of the British manufacturer; provided wool could be obtained as cheap here as in England; otherwise the present rate of duties on the manufactured article are quite low enough.                                                                                                                                    |
| 26. Is any change necessary in levying or collecting duties on such articles to prevent fraud?                                                                                                                                                         | 26. Perhaps we are not sufficiently acquainted with the present mode to answer, but should say the foreign article should be appraised in this country.                                                                                                                                                                                                                   |
| 27. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                           | 27. From \$9,000 to \$10,000 materials; \$3,000 for labor; say \$500 for transportation. It should be observed that three of the owners out of four are operatives and labor for the concern, thereby manufacturing much cheaper than though all the operatives were hired. Reasonable wages for the three owners will absorb all there is left from materials and wages. |
| 28. What amount of the agricultural productions of the county is consumed in your establishment, and what amount of other domestic productions?                                                                                                        | 28. From two to three thousand dollars' worth.                                                                                                                                                                                                                                                                                                                            |
| 29. What quantity or amount of manufactures, such as you make, is produced in the United States, and what amount in this State?                                                                                                                        | 29. We believe there is but one other in the United States for the manufacture of army blankets, near Philadelphia.                                                                                                                                                                                                                                                       |
| 30. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., would it cause you to abandon your business, or would you manufacture at reduced prices?                                               | 30. It would, unless the duty on coarse foreign wool was removed with it: as it now stands it is about 70 per cent. against us.                                                                                                                                                                                                                                           |
| 31. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                         | 31. Should the duty on blankets be removed, and wool be protected, we should be ruined: we should have no capital to be employed in other pursuits.                                                                                                                                                                                                                       |
| 32. Is there any pursuit in which you could engage, from which you could derive greater profits, even after a reduction of the import duties to 12½ per cent.?                                                                                         | 32. Undoubtedly, if we engaged in any.                                                                                                                                                                                                                                                                                                                                    |

## DOCUMENT 10.—No. 31—Continued.

| QUESTIONS.                                                                                                                                                                  | ANSWERS.                                                                                                    |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------|
| 33. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of six per cent., and how gradual should the reduction be? | 33. It will be perceived that they (duties) cannot be reduced from the present rate to yield us any profit. |
| 34. Average profit of money or capital in your county?                                                                                                                      | 34. Seven per cent.                                                                                         |
| 35. Average rate of wages in your county?                                                                                                                                   | 35. From \$10 to \$20 probably per month.                                                                   |

## DOCUMENT 10.—No. 32.

*Manufactory of Woollen, situate in the town of Sidney, in the County of Delaware, in the State of New York, March, 1832.*

| QUESTIONS.                                                                                                                                                           | ANSWERS.                                                                                                                                                                                                                                                                                                                                                    |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. By what power—water, steam, or what other?                                                                                                                        | 1. By water power, taken from the Susquehannah river.                                                                                                                                                                                                                                                                                                       |
| 2. When established; and whether a joint stock concern?                                                                                                              | 2. Commenced business 1st Sept'r, 1827; owned by Jacob Crooker & Israel Williams, mechanics, who work at the business.                                                                                                                                                                                                                                      |
| 3. Capital invested in ground and buildings, water power and machinery?                                                                                              | 3. Whole capital invested, as we estimate it, in water privilege, buildings, and machinery, at seven thousand six hundred and fifty dollars.                                                                                                                                                                                                                |
| 4. Average amount in materials, in cash for the purchase of materials, and payment of wages?                                                                         | 4. This is difficult for us to make a correct statement; but, as near as we can calculate, we say fifteen hundred dollars.                                                                                                                                                                                                                                  |
| 5. Annual rate of profit on the capital invested since the establishment of the manufactory?                                                                         | 5. To this we answer, it falls considerably short of the interest of the money laid out.                                                                                                                                                                                                                                                                    |
| 6. How much of the capital is borrowed, and what interest is paid on it?                                                                                             | 6. Fifteen hundred dollars borrowed, at seven per cent.                                                                                                                                                                                                                                                                                                     |
| 7. What has been the rate of profits annually for the last three years? If a joint stock company, what dividends have been received?                                 | 7. Finding our business afforded a very small profit, we, to enable ourselves to continue business, have done a considerable business of custom carding and cloth dressing, so that we are not able to say exactly what interest the manufacturing affords; but, as near as we can calculate, not more than three or four per cent. on the amount invested. |
| 8. What portion of the income of the company has been converted into fixed capital, or retained for contingent or other objects, and therefore not annually divided? | 8. This question needs not an answer from us.                                                                                                                                                                                                                                                                                                               |
| 9. Causes of the increase (or decrease) of profit at different periods of time?                                                                                      | 9. We should say to this question, being men of the laboring class, that labor was not sufficiently protected against foreign competition, but that the business is improving by means of the tariff.                                                                                                                                                       |
| 10. Rates of profit on capital otherwise employed in the same county and State?                                                                                      | 10. One of us, Crooker, is doing other business in farming and running of mills, which I think affords a profit of twenty per cent.                                                                                                                                                                                                                         |

DOCUMENT 10.—No. 32—Continued.

| QUESTIONS.                                                                                                                                                                                                                                             | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                 |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 11. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                 | 11. We cannot answer this question, as we do not keep a statement separate of the different articles, but keep the amount of our sales in gross.                                                                                                                                                                                                                                                                         |
| 12. Quantity and value of raw materials annually used, distinguishing between foreign and domestic products?                                                                                                                                           | 12. We use about 4,500 lbs. domestic wool annually; other articles we cannot estimate on so short notice.                                                                                                                                                                                                                                                                                                                |
| 13. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                        | 13. We cannot, for want of information, answer this question.                                                                                                                                                                                                                                                                                                                                                            |
| 14. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                      | 14. Employ five men, average wages \$12 per month, and board them beside; and four women, average wages \$1 per week, and board them.                                                                                                                                                                                                                                                                                    |
| 15. How many hours a day employed, and what portion of the year?                                                                                                                                                                                       | 15. We employ our hands the whole year, and work about 12 hours per day.                                                                                                                                                                                                                                                                                                                                                 |
| 16. Rate of wages of similar classes otherwise employed in the same State and county?                                                                                                                                                                  | 16. Our best estimate is men at about \$10 at any other business beside their trade, and women at 6 shillings per week.                                                                                                                                                                                                                                                                                                  |
| 17. Number of horses or other animals employed?                                                                                                                                                                                                        | 17. This might amount to the use of one horse.                                                                                                                                                                                                                                                                                                                                                                           |
| 18. Whether the manufactures find a vent at the manufactory? If not, how far they are sent to a market?                                                                                                                                                | 18. We retail about two-thirds at the factory; the remainder of our goods we sell at New York market, about 200 miles distant.                                                                                                                                                                                                                                                                                           |
| 19. Whether foreign articles of the like kind enter into competition with them at such place of sale?                                                                                                                                                  | 19. They do, as we suppose, so as to cause them at sometimes to sell below the cost of making them.                                                                                                                                                                                                                                                                                                                      |
| 20. Where are the manufactures consumed?                                                                                                                                                                                                               | 20. Those we sell at New York market we cannot tell; but those we sell at home, are consumed by our neighbors.                                                                                                                                                                                                                                                                                                           |
| 21. Whether any of the manufactures are exported to foreign countries? If so, where?                                                                                                                                                                   | 21. We do not know.                                                                                                                                                                                                                                                                                                                                                                                                      |
| 22. Whether the manufacture is sold by the manufacturer for cash? If on credit, at what credit? If bartered, for what?                                                                                                                                 | 22. That portion we sell at New York market, for cash; at home, part on credit, for cash pay, and a part bartered for agricultural produce and fuel.                                                                                                                                                                                                                                                                     |
| 23. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 23. We cannot make any statement to, and return this to you in so short time as you have directed.                                                                                                                                                                                                                                                                                                                       |
| 24. The prices at which the manufacture has been sold by the manufacturer since the establishment?                                                                                                                                                     | 24. We cannot make a correct statement to this question, our sales have been so varying.                                                                                                                                                                                                                                                                                                                                 |
| 25. What rate of duty is necessary to enable the manufacturer to enter into competition, in the home market, with similar articles imported?                                                                                                           | 25. This question we cannot answer; but we have felt encouraged to continue a small business, in hopes that the present protection given by our General Government, with a vigilant eye by them to prevent fraud by foreigners, might improve to a better reward to our industry, in a few years; but we cannot tell how long the mechanics of England may continue to work for less than will support them comfortably. |
| 26. Is any change necessary in levying or collecting duties on such articles to prevent fraud?                                                                                                                                                         | 26. We are influenced to believe that much fraud is committed, and that much care should be taken by our Government to place men in such stations purely American.                                                                                                                                                                                                                                                       |

| QUESTIONS.                                                                                                                                                                                                            | ANSWERS.                                                                                                                                                                                      |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 27. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                          | 27. We could not make this calculation in so short time.                                                                                                                                      |
| 28. What amount of the agricultural productions of the county is consumed in your establishment, and what amount of other domestic productions?                                                                       | 28. This also would take more time than allotted to us; our business is very small.                                                                                                           |
| 29. What quantity or amount of manufactures, such as you make, is produced in the United States, and what amount in this State?                                                                                       | 29. This question we are unable to answer.                                                                                                                                                    |
| 30. If the duty upon the foreign manufacture of the kind of goods which you make, were reduced to $12\frac{1}{2}$ per cent., would it cause you to abandon your business, or would you manufacture at reduced prices? | 30. If the profit was any less than it now is, we could not continue it.                                                                                                                      |
| 31. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                        | 31. Such is the situation of our works, that if we had to abandon them, they would not raise any capital for any other business, but would be a dead loss to nearly their cost.               |
| 32. Is there any pursuit in which you could engage, from which you could derive greater profits, even after a reduction of the import duties to $12\frac{1}{2}$ per cent.?                                            | 32. We have done other business previous to this, and think that we never before engaged in any that afforded so small a profit; but with small capitals, it is difficult to change business. |
| 33. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent., and how gradual should the reduction be?                                             | 33. We think we do not now realize 6 per cent.                                                                                                                                                |
| 34. Average profit of money or capital in your county?                                                                                                                                                                | 34. We cannot exactly answer this, but know that money will always command 7 per cent.                                                                                                        |
| 35. Average rate of wages in your county?                                                                                                                                                                             | 35. For men at agricultural pursuits, at about \$9 per month.                                                                                                                                 |

SIR: Your request, with the questions contained above, came to hand so late, (only four days before you requested it handed back, that is the 20th,) that I did all I could in one day, and intend sending it back the next.

Yours respectfully,

CROOKER & WILLIAMS.

It appears by the statement of the proprietors, that, after paying the legal interest (7 per cent.) on \$1,500 of borrowed money, they make but three or four per cent. on the \$7,650 invested in fixtures, although they are themselves the managers of the concern. This is far below the average rate of profit on small establishments, where the proprietors incorporate their own labor with the operations of their capital, and would hardly be equal to a compensation for their services alone. It is fair to infer that their actual profits have been greater, from the suggestion made by themselves, under question No. 7, that their "business of custom carding and cloth dressing" makes it difficult to give a certain reply.

J. A. DIX.

## DOCUMENT 10.—No. 33.

*SCHEDULE of Woollen Factories in the State of New York, for the year 1831, as far as returns have been received.*

| Names of Factories.             | Counties.  | Capital, includ-<br>ing stock and<br>goods. | Persons em-<br>ployed. | Wages.  |         | Wool used. | Value of wool. |         | Value of goods<br>manufactured. | Broad-cloth. |         | Kersey-mere. | Flannels and<br>baizes. |        | Satinets. | Cassimets, ker-<br>seys, and nar-<br>row cloth. | Carpeting. |

|                                                                                       | -          | 895,377                           |        | 1,203                  | 160,000 | 1,158,797 | 402,659    | 832,003        | 274,308 | 151,682                         | 485,381      | 470,972 | 11,148       |                         |        |           |                                                 | 6,000      |

This schedule contains almost all the large woollen establishments in the State. There are in all, as appears by Williams' Register, 202, but the greater part of those not contained in the above are small establishments, engaged in manufacturing to a limited extent only, and depending very much on what is called "custom work," i. e. carding, dressing cloth manufactured in families, and taking wool to manufacture at "halves," the manufacturers and the persons furnishing the raw material sharing equally the manufactured article.

The above is a copy of an abstract furnished by Mr. Peter H. Schenck, of the city of New York, and made from original returns furnished by agents and proprietors of woollen establishments. I compared the original abstract with the original returns from which it was made, and found it to be correct.

## DOCUMENT 10.—No. 34.

*Schedule of Capital invested, description and quantity of Goods annually made, the quantity of all Materials annually used, and other particulars relative to Woollen Factories situated in the State of New York, for the year 1831.*

## Summary of returns from 54 Woollen Factories.

|                                                                                            |          |           |           |
|--------------------------------------------------------------------------------------------|----------|-----------|-----------|
| Wool used                                                                                  | lbs.     | 1,158,797 |           |
| Value of wool                                                                              |          |           | \$631,659 |
| Amount of capital invested, including the average annual amount of stock and goods on hand |          |           | 1,040,377 |
| Number of persons employed, viz.                                                           |          |           |           |
| Males under sixteen years of age                                                           |          |           |           |
| Males sixteen years and under twenty-one years                                             |          |           |           |
| Males twenty-one years and upwards                                                         |          | 1,433     |           |
| Females under sixteen years of age                                                         |          |           |           |
| Females sixteen years and upwards                                                          |          |           |           |
| Number of persons in families, exclusive of the above, but maintained by their wages       |          | 2,161     |           |
| Aggregate amount of wages                                                                  |          |           | 197,500   |
| Average amount of value of goods made                                                      |          |           | 1,297,003 |
| Quantity of broadcloth                                                                     | in yards | 274,308   |           |
| Quantity of flannels and baizes                                                            | "        | 485,381   |           |
| Quantity of kerseymere                                                                     | "        | 151,682   |           |
| Quantity of satinnet                                                                       | "        | 470,972   |           |
| Quantity of cassinet, kerseys, and other narrow cloth                                      | "        | 11,148    |           |
| Quantity of carpeting                                                                      | "        | 6,000     |           |

## Summary of returns from 30 Woollen Factories.

|                                                              |            |         |          |
|--------------------------------------------------------------|------------|---------|----------|
| Number of sets of cards in use                               |            | 83      |          |
| Quantity of cotton warps, &c.                                | in lbs.    | 32,974  | \$10,374 |
| Quantity of indigo                                           | "          | 10,178  | 13,824   |
| Quantity of pot and pearl ashes                              | "          | 13,449  | 803      |
| Quantity of woad                                             | "          | 9,891   | 675      |
| Quantity of madder, lac, dye, and cochineal                  | "          | 15,101  | 9,182    |
| Quantity of logwood, fustic, quercitron, and other dye woods | "          | 332,181 | 6,815    |
| Quantity of alum, vitriol, copperas, and other chemicals     | "          | 26,768  | 3,956    |
| Quantity of tartar, and all other drugs                      | "          | 4,559   | 719      |
| Quantity of block tin                                        | "          | 739     | 151      |
| Quantity of glue, pates, and pelts                           | "          | 45,149  | 2,320    |
| Quantity of olive oil                                        | in gallons | 13,879  | 13,227   |
| Quantity of sperm oil                                        | "          | 5,858   | 5,169    |
| Quantity of whale oil                                        | "          | 234     | 84       |
| Quantity of sweet oil                                        | in bottles | 248     | 79       |
| Quantity of hard soap                                        | in pounds  | 43,891  | 4,021    |
| Quantity of soft soap                                        | in barrels | 1,270   | 3,379    |
| Quantity of chamber ley                                      | "          | 3,482   | 2,186    |
| Quantity of teasels                                          | thousands  | 2,372   | 3,766    |
| Quantity of wrapping paper                                   | reams      | 143     | 347      |
| Quantity of lime and bran                                    | "          |         | 177      |
| Quantity of wood used for fuel                               | cords      | 2,697   | 6,635    |
| Quantity of mineral coal                                     | tons       | 120     | 679      |
| Tapes, thread, twine, sewing-silk, wick-yarn, tallow, &c.    |            |         | 1,026    |
| Boards, nails, tow-cloth, &c., used in packing               |            |         | 1,011    |
| Stationery, brooms, brushes, &c.                             |            |         | 715      |

## DOCUMENT 10.—No. 34—Continued.

|                                                                                                                |               |           |
|----------------------------------------------------------------------------------------------------------------|---------------|-----------|
| Materials used in repairs annually, viz. iron, steel, screws, wire,<br>nails, tacks, lumber, cards, reeds, &c. | -             | \$5,781   |
| Leather                                                                                                        | -             | 1,129     |
| Charcoal                                                                                                       | 3,547 bushels | 382       |
| Transportation, coastwise, chiefly inland, by rivers roads, and canals                                         | -             | 7,619     |
| Number of barrels of flour used by the families immediately connected with the factory                         | 2,124         | 11,590    |
| Aggregate amount                                                                                               | -             | \$117,820 |
| Amount of foreign materials, as stated in returns from 18 woollen<br>factories, including wool                 | -             | \$87,086  |

This was furnished by Mr. Peter H. Schenck, of New York, from original accounts received from woollen factories.

J. A. DIX.

## DOCUMENT 10.—No. 35.

ORISKANY, March 20, 1832.

DEAR SIR: Enclosed you have the questions propounded to me, with an answer of some sort to each. I should have been very happy to have had it in my power to give you more valuable information, and to have put the answers in better form. I am so much engaged in the business of the factory, particularly at this time, as our dam has been carried away by the flood, that I have not time to devote to the subject; and, I do not doubt but what I have been interrupted more than a hundred times since I commenced answering the questions, about which I have only been able to spend a few hours. I hope, therefore, you will make every allowance, and I beg you to believe that I have designed to be frank and full in every particular.

Very truly, and with respect, your friend, &c.,

S. NEWTON DEXTER, *Agent of Oriskany Co'y.*

JOHN A. DIX, Esq.

*Questions and Answers on the Woollen Manufactures at Oriskany, &c.—Answers by S. Newton Dexter.*

| QUESTIONS.                                                                                                                                                                                                       | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. Is any change necessary in levying and collecting the duty on imported woollens to prevent fraud?                                                                                                             | 1. In answer to the first question, I have only to observe that, were the one dollar minimum stricken out, and practical men only appointed as appraisers, I do not question all difficulty of the kind now complained of would be at an end.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 2. If minimums should be abolished, and the duty assessed upon the actual value of the imported article in the American port, what rate of ad valorem duty would be equivalent to the present, with the minimum? | 2. Should minimums be abolished, and the duties assessed on the actual value of cloths in the American ports, I should apprehend there would great difficulty arise in a variety of ways. The value of goods is vastly more fluctuating in a young country like ours, where there is not much capital, and where, consequently, a glut in the market often reduces the price from 15 to 30 per cent. in the course of three or four months, than in old and rich countries like England. Our ports are so distant from each other, that the price might be greatly reduced in Boston, and not at all in New Orleans; consequently there would be no equality in the duties assessed on the same articles at the different ports. |

| QUESTIONS.                                                                                                                                                                                                                                     | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3. What would be the operation of this change upon the frauds at present supposed to be practised?                                                                                                                                             | 3. Undoubtedly the change in the system of assessing the duty would operate to prevent frauds, as at present practised. I am not prepared to say, however, that there would not be difficulties of that kind, even in this mode of assessing and collecting the revenue.                                                                                                                                                                                                                                                                                                                                    |
| 4. Extent of individual and household manufacture in Oneida county, and how much it has increased since the tariff of 1824?                                                                                                                    | 4. I do not know much about the quantity of individual and household manufacture in this county. I should incline to the belief, that this branch of manufacture had not increased at all since 1824.                                                                                                                                                                                                                                                                                                                                                                                                       |
| 5. Do the persons employed at your manufactory board themselves, and what do they pay per week?                                                                                                                                                | 5. All the persons employed in our manufactory board themselves. The men pay \$1 50; the women pay \$1; boys and girls the same price, \$1.                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 6. What are the component parts of the cost of a yard of broadcloth, which you sell for \$2 60; that is, how much of the cost consists of the price of the raw material, how much of the wages of labor, and how much of the \$2 60 is profit? | 6. Our cloths now sell for only \$2 25. It takes 2½ lbs. of wool to manufacture a yard; cost in 1831 65 cts. per yard, \$1 46<br>Dye stuffs, - - - 7<br>Soap, - - - 2½<br>Olive oil, - - - 6½<br>Fire wood, teazles, tape, paper, &c. 3<br>Labor of manufacturing, - - 72<br><hr/> \$2 37<br>Expense of selling, commission }<br>and guarantee, 5 per cent. } 12<br><hr/> \$2 49.                                                                                                                                                                                                                           |
| 7. What are the several proportions of cost of the raw material, wages of labor, expense of importation, duty, and profit of a yard of broadcloth of British manufacture of the same quality, which sells in the United States for \$2 60?     | These goods sold last year at \$2 75. I much fear they will this year sell as low as \$2. Wool has now fallen to 50 cents for such a quality. This would leave the cost at about \$2 17. We have introduced machinery, within a few months, that has lowered the cost of manufacturing 20 per cent.                                                                                                                                                                                                                                                                                                         |
|                                                                                                                                                                                                                                                | 7. I am not sufficiently well apprised of the price of materials on labor in England, to give this question a proper answer. I have no doubt on my own mind, however, that if we could obtain the materials and the labor as low here as they are obtained in England, we could manufacture a good article as cheap in this country as in any part of the world. Our machinery is as good, or better. Our manufacturers, however, are not skilful enough to manufacture a very handsome article out of very bad materials, or, in other words, to make a very poor piece of cloth resemble a very good one. |

8. NEWTON DEXTER,  
Agent Oriskany Company.

ORISKANY, March 20, 1832.

*Manufactories of Iron, of the Peru Iron Company, situate in the town of Peru, in the County of Clinton, in the State of New York, March, 1832.*

| QUESTIONS.                                                                                                                             | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|----------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. By what power—water, steam, or what other?                                                                                          | 1. The works consist of a forge of sixteen bloomery and anchor fires, a rolling mill, a chain cable, and a nail factory, and are propelled by water power.                                                                                                                                                                                                                                                                                                                                                   |
| 2. When established; and whether a joint stock concern?                                                                                | 2. The establishment was commenced as an individual operation in 1822. Incorporated by the Legislature in 1824, with a capital limited to \$200,000. \$75,000 was subscribed by the original stockholders, but, owing to bad management, it proved unprofitable, and they sold out at the end of a year at 50 per cent. The purchasers, in 1828, added a subscription of \$95,000, which, added to the reduced stock, would make a present investment of \$133,000. It is, of course, a joint stock concern. |
| 3. Capital invested in ground and buildings, water power and machinery?                                                                | 3. 120,000 dollars.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 4. Average amount in materials, in cash for the purchase of materials, and payment of wages?                                           | 4. 100,000 dollars per annum.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 5. Annual rate of profit on the capital invested since the establishment of the manufactory?                                           | 5. None.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 7. What has been the rate of profits annually for the last three years? If a joint stock company, what dividends have been received?   | 7. None.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 9. Causes of the increase (or decrease) of profit at different periods of time?                                                        | 9. Reduction of iron in Great Britain.                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 11. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 11. 500 tons of bar iron made from ore, with 200 tons of the same purchased from other forges, made into 700 tons of nails, hoops, and bolt iron, average worth, 130 dollars per ton. During the year 1832, the annual product will be increased to 700 tons bar iron, with 400 tons from neighboring forges, making 1,000 tons nails, hoop iron, round and cut rods, and 100 tons anchors and chain cables.                                                                                                 |
| 12. Quantity and value of raw materials annually used, distinguishing between foreign and domestic products?                           | 12. 10,814 cords of wood, and 50 tons Virginia coals. No foreign raw or manufactured material used, except 500 dollars in foreign steel.                                                                                                                                                                                                                                                                                                                                                                     |
| 14. Number of men, women and children employed, and average wages of each class?                                                       | 14. 284 men employed. The nature of the business excludes female laborers. Common laborers, board included, receive 80 cents to 1 dollar per day. Artisans, after learning five years, receive from 125 cents to 175 cents per day.                                                                                                                                                                                                                                                                          |
| 15. How many hours a day employed, and what portion of the year?                                                                       | 15. Eleven hours, except bloomers, who average sixteen hours. The works are suspended by frost from manufacturing during the months of January and February.                                                                                                                                                                                                                                                                                                                                                 |

## DOCUMENT 10.—No. 37—Continued.

| QUESTIONS.                                                                                                                                                                                                                                             | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 17. Number of horses or other animals employed?                                                                                                                                                                                                        | 17. 113 horses and draft cattle employed.                                                                                                                                                                                                                                                                                                                                                                                                    |
| 18. Whether the manufactures find a vent at the manufactory? If not, how far they are sent to a market?                                                                                                                                                | 18. The whole, or nearly so, of the manufactures of these works, are transported to, and sold in the city of New York, distance 300 miles. Cost of transportation, including 10 miles by land to Lake Champlain, 2 dollars; about 6 dollars per ton.                                                                                                                                                                                         |
| 19. Whether foreign articles of the like kind enter into competition with them at such place of sale; and to what extent?                                                                                                                              | 19. Every article manufactured; nails perhaps to a less extent than bar and rolled iron, comes in direct competition with those of Europe.                                                                                                                                                                                                                                                                                                   |
| 20. Where are the manufactures consumed?                                                                                                                                                                                                               | 20. Nails are consumed exclusively in the United States. Rolled iron chiefly in bolts, rods, hoops, anchors, and cables, are applied to the purposes of commerce.                                                                                                                                                                                                                                                                            |
| 21. Whether any of the manufactures are exported to foreign countries? If so, where?                                                                                                                                                                   | 21. None.                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 22. Whether the manufacture is sold by the manufacturer for cash? If on credit, at what credit? If bartered, for what?                                                                                                                                 | 22. Sold at an average credit of six months. None bartered.                                                                                                                                                                                                                                                                                                                                                                                  |
| 23. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 23. The cost of the manufactured article is less. The diminution has been gradual; is equal to 20 to 25 per cent during five years. It is the result of increased skill in the application of labor and machinery, and not of any diminution of the original cost of the raw material.                                                                                                                                                       |
| 24. The prices at which the manufacture has been sold by the manufacturer since the establishment?                                                                                                                                                     | 24. Average hoop iron:—1825, \$150; 1826, \$145; 1827, \$135; 1828, \$125; 1829, \$125; 1830, \$120; 1831, \$120. Average bolts:—1825, \$150; 1826, \$130; 1827, \$130; 1828, \$130; 1829, \$130, 1830, \$115; 1831, \$115. Chain cables, average:—1825, \$240; 1830, \$210. Anchors, average:—1825, \$170. Anchors, medium sizes:—1831, \$150.                                                                                              |
| 25. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                             | 25. The present rates, with a law for the prevention of frauds, viz. that all articles manufactured in whole, of sheet, rod, hoop, bolt, or bar iron, or of which sheet, rod, hoop, bolt, or bar iron shall constitute the greatest weight, shall pay the same duty per pound that is now paid on sheet, rod, hoop, bolt, or bar iron, respectively. No partial manufacture of iron ought to change a specific duty into an ad valorem duty. |
| 30. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent, would it cause you to abandon your business, or would you manufacture at reduced prices?                                                | 30. It would cause a total abandonment of the business.                                                                                                                                                                                                                                                                                                                                                                                      |
| 31. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                         | 31. The capital would be a total loss.                                                                                                                                                                                                                                                                                                                                                                                                       |

| QUESTIONS.                                | ANSWERS.                                                                                                                                                                                               |
|-------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 35. Average rate of wages in your county? | 35. For a laboring man, 12 dollars per month, exclusive of board. The board is 8 dollars per month. A young man, after five years' instruction, earns, including board, from \$1 25 to \$1 75 per day. |

This statement is furnished by Mr. N. Saltus, of New York, an importer of iron, and the agent of the Peru Company, from the books of the company, and personal interview with me in New York. There are in the packet marked "correspondence, &c.," two letters from Mr. Ezra Williams, postmaster at Clintonville, a highly intelligent man, and formerly agent of the company, containing much valuable information collected in the vicinity of the works. There is, also, in the same packet a printed paper, marked "statistics of the valley of the Au Sable," prepared with a view to a bank application, by gentlemen on whom implicit reliance may be placed. To this paper, and the letters of Mr. Williams, the attention of the department is respectfully invited.

J. A. DIX.

## DOCUMENT 10.—No. 38.

CLINTONVILLE, *March 13, 1832.*

Gen. JOHN A. DIX.

DEAR SIR: I wrote you by last mail, advising that you might expect by the present full replies to the interrogatories contained in the blank forms sent me. I regret that I am likely at last to disappoint those expectations; having learned from Mr. Burt, manager of the Peru Iron Co.'s Works at this place, that some of the most important items of the information sought for are not within his power to communicate, inasmuch as the books containing the final accounts of the company are kept at New York, under the immediate direction of the president (Francis Saltus, esq., 32 South st.) and board of directors. To him, therefore, recourse must be had, if the statement should be full upon all the points embraced in the queries.

Notwithstanding this obstacle to the prosecution of the duty confided to me, and at the risk of wasting a little time and paper upon a subject respecting which the information must be necessarily imperfect, I shall proceed to reply to such of the queries as I may be enabled to do, from the data within my control.

1. The works consist of a forge, rolling mill, chain cable and nail factories, and are propelled by water power.

2. The establishment was commenced as an individual enterprise, in 1822; incorporated by the Legislature in November, 1824, with a capital limited to \$200,000. \$75,000 was subscribed by the original stockholders; but, owing to bad management, it proved unprofitable, and they sold out at the end of a year at 50. The purchasers, in 1828, added a subscription of about \$95,000; which, added to the reduced stock, would make a present investment of about \$130,000. It is of course a joint stock concern.

3 to 9, inclusive, can only be answered by the president.

10. This is the only incorporated company in actual operation.

11 and 12. Refer to enclosed schedule.

13. An ordinary price current will furnish an answer. It includes bar iron, hoops, bolts, nails, cables and castings.

14. Bloomers' (operatives in forging bar iron) wages are \$16 per ton; artisans and laborers in the rolling mill \$1 per day; nail makers, 20 cents for eights to twenties, and 55 cents for threes and fours, per 100 lbs.; board in all cases included. The nature of the business excludes female laborers.

15. Twelve hours, except in the forge, where it will average eighteen hours, for forty-four weeks or ten months.

## DOCUMENT 10.—No. 38—Continued.

16. So far as my information extends, the rate of wages is nearly uniform throughout the country; and this opinion is fortified by an examination of the report of the Committee on Manufactures, in Congress, 1828.

17. See enclosed schedule.

18. The whole (or nearly so) of the manufactures at these works are transported to, and sold in the city of New York; distance 300 miles; cost of transportation, (including ten miles by land to Lake Champlain, \$1 75,) about \$5 50 per ton.

19. The answer is obvious. Every article manufactured here (nails, perhaps, to a less extent than bar and rolled iron,) come in direct competition with those of Europe.

20. Nails are consumed exclusively in this country. Rolled iron, chiefly in bolts, hoops, and cables, is applied to the purposes of commerce.

21. Embraced in the foregoing.

22 to 33, inclusive. Would probably receive full replies from the president.

34. Have no data on which to found an opinion.

35. Twelve dollars per month, exclusive of board at eight dollars per month.

Here, perhaps, it might be proper to conclude; but as the above is a total failure in regard to the information desired by the Secretary, I venture to proceed for your individual gratification, rather than with the hope of communicating any thing of importance to the public.

The schedule or abstract enclosed is copied from one furnished me by Mr. Burt, and embraces the years 1828, '29, '30. Bar or wrought iron made per annum, 500 tons; rolled, 1,000 tons of 2,240 pounds: the additional 500 tons having been purchased from the various establishments in this vicinity. These quantities were considerably increased in 1831, and a further increase may be anticipated during the current year—say 800 tons manufactured, and from 6 to 700 purchased; so that the operations of the rolling and slitting mill may be set down at about 1,500 tons. The average price of bar iron in this place is about \$75; that of rolled iron, in New York, about \$130.

Nails are set down in the schedule at 624 tons of 2,000 pounds. It would not be excessive to estimate the manufacture of the current year at 700 tons: price during the last year, up to October, 5½ cents per pound; since that time, 6½ cents, or \$130 per ton. Of the price of chain cables, I am ignorant.

The quantity of castings is too trivial to be the subject of remark. They are chiefly confined to machinery for the ordinary operations of the establishment.

As to the expense of making bar iron, I estimate at a little more than sixty dollars per ton; say thus:

|                                   |                       |                     |
|-----------------------------------|-----------------------|---------------------|
| 2½ tons ore,                      | at \$6 (at the works) | \$13 50             |
| 500 bushels coal,                 | at 5 cents            | 25 00               |
| Bloomers' wages,                  |                       | 16 00               |
| Repairs,                          |                       | 4 00                |
| Interest and incidental expenses, |                       | 3 50                |
|                                   |                       | <hr/> \$62 00 <hr/> |

The ore is raised from a vein already penetrated to the depth of 140 feet by steam power, and is the richest hitherto discovered in any part of the world; yielding, by chemical analysis, upwards of eighty per cent.

There are now in operation in this region of country between eighty and one hundred forge fires, each of which will manufacture about forty tons iron, and afford subsistence to nearly fifty souls. Noticing the price of the raw material, you will perceive that the chief value of the manufactured article is the fruit of *manual labor*; hence its importance in a political and moral point of view.

A large proportion of these establishments are struggling for existence; their proprietors generally combatting not only their poverty of means, but the imperfection of their skill as artisans, especially when compared with the manufacturers of Europe. Great improvements are making annually in the process of manufacturing. Only five years ago it required 3 tons of the same kind of ore of which it now requires but 2½, to make a ton of bar iron.

In conclusion, should it appear from what I have already said that important information might be derived from pursuing these remarks more in detail, it will afford me much pleasure to fulfil your wishes.

I remain, very respectfully,

Your obedient servant,

E. WILLIAMS.

\* Tons of bituminous coal consumed.

† Tons of American iron manufactured.

## DOCUMENT 10.—No. 39.

CLINTONVILLE, March 29, 1832.

DEAR SIR: Your favor of 19th inst. came to hand during a week's absence from home, or your request for an earlier reply than I am able to give it would have been fulfilled.

In reply to your first query, I remark, that nothing but hard wood *charcoal* is used in the manufacture of bar iron, and this, of course, is made in the neighboring forests. It would cost, delivered at the works, from 1½ to 1¾ dollars per cord. White, and Norway pine is used in heating iron for rolling, and costs, the former \$1, and the latter \$1 12½ per cord, and the average consumption varies little from four cords per ton. Liverpool, Virginia, and other bituminous coals are chiefly used at rolling mills near the sea board; they are used at this place (Liverpool, I believe, exclusively) only in the welding of chain links for cables. This is, of course, an answer to your second interrogatory.

3d query. In what time will a bloomer manufacture a ton of bar iron? Two persons are necessary to each fire: the one as a maker of iron, who keeps the fire in order, regulates the charges of coal and ore, and assists in directing the application of power to the hammer wheels; the other has little other duty than that of hammering, and this duty is so laborious as to require all the intervals of sinking the ore and heating the half blooms for repose, though a skillful and athletic hammerman will sometimes, for several days successively, hammer for two fires. Each of these fires, with two hands, will make one and one-fourth tons of flat or square iron per week. This was the average of the Peru Iron Company's forge during the last year: it is, however, about two cwt. more than the smaller establishments about the country will perform, these works having been constructed in a very superior style, and are indeed a model worthy the imitation of manufacturers in general.

## DOCUMENT 10.—No. 39.—Continued.

4th query. In what time will a nail maker manufacture 100 lbs. 8's to 20's, also of 3's and 4's?

|         |      |   |                       |   |                       |
|---------|------|---|-----------------------|---|-----------------------|
| Answer. | 3's  | - | 800 lbs. per week, at | - | 65 cents per 100 lbs. |
|         | 4's  | - | 200 lbs. per day, at  | - | 52 do do              |
|         | 8's  | - | 450 do                | - | 29 do do              |
|         | 10's | - | 600 do                | - | 20 do do              |
|         | 12's | - | 700 do                | - | 19 do do              |
|         | 20's | - | 800 do                | - | 17 do do              |

Machines, of course, at the above prices, are furnished by the employer. 3's and 4's are cut cold; the larger plates are heated with pine wood, and an experienced nailer informs me that the consumption is about half a cord of wood per ton.

In reply to your 5th query, I remark, that the uniform price for board and washing at this place, and generally in this vicinity, is \$2 25 per week.

It would afford me much pleasure to enlarge on the subject if the state of my health, and, I might add, my leisure (as the mail is waiting) permitted.

Should any thing more be required, and still in season for the purposes of the department, my leisure is at your service.

Respectfully, your obedient servant,

E. WILLIAMS.

*Manufactory of Rolled Iron and Cut Nails, situate in the town of Peru, in the County of Clinton, in the State of New York, March, 1832.*

| QUESTIONS.                                                                                                                                                           | ANSWERS.                                                                                                                                            |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. By what power—water, steam, or what other?                                                                                                                        | 1. Water power.                                                                                                                                     |
| 2. When established, and whether a joint stock concern?                                                                                                              | 2. Joint concern.                                                                                                                                   |
| 3. Capital invested in ground and buildings, water power and machinery?                                                                                              | 3. \$30,000.                                                                                                                                        |
| 4. Average amount in materials, in cash for the purchase of materials, and payment of wages?                                                                         | 4. \$40,650.                                                                                                                                        |
| 5. Annual rate of profit on the capital invested since the establishment of the manufactory?                                                                         | 5. Eight per cent. annually.                                                                                                                        |
| 6. How much of the capital is borrowed, and what interest is paid on it?                                                                                             | 6. One half at seven per cent.                                                                                                                      |
| 7. What has been the rate of profits annually for the last three years? If a joint stock company, what dividends have been received?                                 | 7. Four per cent.                                                                                                                                   |
| 8. What portion of the income of the company has been converted into fixed capital, or retained for contingent or other objects, and therefore not annually divided? | 8. To keep works in order, about four per cent., which is the reason of difference between the answers of the 4th and 5th questions.                |
| 9. Causes of the increase (or decrease) of profit at different periods of time?                                                                                      | 9. Excessive importations of rolled iron and home competition in the article of cut nails, on which the present duty has been for years prohibited. |
| 10. Rates of profit on capital otherwise employed in the same county and State?                                                                                      | 10. About seven per cent.                                                                                                                           |
| 11. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                               | 11. 225 tons cut nails, worth \$110.<br>225 tons rolled iron, round, flat, and square, worth \$96.<br>450 tons.                                     |

| QUESTIONS.                                                                                                                                                                                                                                             | ANSWERS.                                                                                                                                                                                                                                                                                                                                   |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 12. Quantity and value of raw materials annually used, distinguishing between foreign and domestic products?                                                                                                                                           | 14. 450 tons bar iron, 1,200 cords wood, 3,000 bushels coal; \$35,500, all domestic.                                                                                                                                                                                                                                                       |
| 13. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                        | 13. No iron imported exactly similar; the English cable iron is nearest the quality, and is worth in New York from \$90 to \$100 per ton, at six months' credit, imported from Wales.                                                                                                                                                      |
| 14. Number of men, women and children employed, and average wages of each class?                                                                                                                                                                       | 14. 40 men, at 75 cents per day,<br>19 boys, at 37½ cents per day.                                                                                                                                                                                                                                                                         |
| 15. How many hours a day employed, and what portion of the year?                                                                                                                                                                                       | 15. 12 horses, 10 months in the year.                                                                                                                                                                                                                                                                                                      |
| 16. Rate of wages of similar classes otherwise employed in the same State and county?                                                                                                                                                                  | 16. For men, \$11; for boys, \$5.                                                                                                                                                                                                                                                                                                          |
| 17. Number of horses or other animals employed?                                                                                                                                                                                                        | 17. 12 horses.                                                                                                                                                                                                                                                                                                                             |
| 18. Whether the manufactures find a vent at the manufactory? If not, how far they are sent to a market?                                                                                                                                                | 18. From 300 to 500 miles, to Boston and New York.                                                                                                                                                                                                                                                                                         |
| 19. Whether foreign articles of the like kind enter into competition with them at such place of sale?                                                                                                                                                  | 19. Foreign rolled iron does enter into competition in both markets.                                                                                                                                                                                                                                                                       |
| 20. Where are the manufactures consumed?                                                                                                                                                                                                               | 20. In the United States.                                                                                                                                                                                                                                                                                                                  |
| 21. Whether any of the manufactures are exported to foreign countries? If so, where?                                                                                                                                                                   | 21. None are exported.                                                                                                                                                                                                                                                                                                                     |
| 22. Whether the manufacture is sold by the manufacturer for cash? If on credit, at what credit? If bartered, for what?                                                                                                                                 | 22. Generally on credit of six months.                                                                                                                                                                                                                                                                                                     |
| 23. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 23. It has decreased principally in labor, possibly 1½ to 2 per cent. Raw materials, coal, and wood, have increased, say one per cent., and continue to increase in value.                                                                                                                                                                 |
| 24. The prices at which the manufacture has been sold by the manufacturer since the establishment?                                                                                                                                                     | 24. Nails from \$105 to \$120 per ton; manufactured iron from \$90 to \$140.                                                                                                                                                                                                                                                               |
| 25. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                             | 25. The present duty must remain on rolled iron, or we must stop manufacturing.                                                                                                                                                                                                                                                            |
| 26. Is any change necessary in levying or collecting duties on such articles to prevent fraud?                                                                                                                                                         | 26. No correct information on the subject.                                                                                                                                                                                                                                                                                                 |
| 27. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                           | 27. About 7-14ths labor, 6-14ths raw material, 1-14th profit.                                                                                                                                                                                                                                                                              |
| 28. What amount of the agricultural productions of the county is consumed in your establishment, and what amount of other domestic productions?                                                                                                        | 28. We have no means of knowing precisely how much we consume, but our county is a good agricultural county; and all the productions are consumed in the manufacturing business, and from ten to fifteen thousand dollars in provisions are brought from Vermont, and over that amount comes in flour from the western part of this State. |

## DOCUMENT 10.—No. 40.—Continued.

| QUESTIONS.                                                                                                                                                                                               | ANSWERS.                                                                                                                                                                                                              |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 29. What quantity or amount of manufactures, such as you make, is produced in the United States, and what amount in this State?                                                                          | 29. We have not the means of knowing.                                                                                                                                                                                 |
| 30. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., would it cause you to abandon your business, or would you manufacture at reduced prices? | 30. We should be compelled to abandon our business.                                                                                                                                                                   |
| 31. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                           | 31. We should have no capital.                                                                                                                                                                                        |
| 32. Is there any pursuit in which you could engage, from which you could derive greater profits, even after a reduction of the import duties to 12½ per cent.?                                           | 32. We doubt whether there would be any business profitable for a few years, as this is a manufacturing county, and, in such an event, capital would be destroyed, and farmers would have a less advantageous market. |
| 33. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent., and how gradual should the reduction be?                                | 33. Not any. We do not realize on our rolling over 6½ to 7 per cent.; nails neat us something more, but home competition reduced them last season to 4 per cent. profit.                                              |
| 34. Average profit of money or capital in your county?                                                                                                                                                   | 34. Seven per cent.                                                                                                                                                                                                   |
| 35. Average rate of wages in your county?                                                                                                                                                                | 35. \$11 per month.                                                                                                                                                                                                   |

The within statement was made by the proprietors. Mr. Oliver Keese, 3d postmaster at Keeseville, recently a partner in the concern, certifies to the accuracy of the information contained in it.

JOHN A. DIX,

## DOCUMENT 10.—No. 41.

*Manufactory of Iron, situate at Carthage, in the town of Wilna, in the County of Jefferson, in the State of New York, March, 1832.*

| QUESTIONS.                                                                                                                           | ANSWERS.                                         |
|--------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------|
| 1. By what power—water, steam, or what other?                                                                                        | 1. Water power.                                  |
| 2. When established, and whether a joint stock concern?                                                                              | 2. In 1817. The property of an individual.       |
| 3. Capital invested in ground and buildings, water power and machinery?                                                              | 3. About \$30,000.                               |
| 4. Average amount in materials, in cash for the purchase of materials, and payment of wages?                                         | 4. \$33,437 per annum.                           |
| 5. Annual rate of profit on the capital invested since the establishment of the manufactory?                                         | 5. Has not equalled the legal interest of money. |
| 6. How much of the capital is borrowed, and what interest is paid on it?                                                             | 6. \$30,000 at seven per cent.                   |
| 7. What has been the rate of profits annually for the last three years: if a joint stock company, what dividends have been received? | 7. Answered under No. 5.                         |

| QUESTIONS.                                                                                                                                                                                                                                             | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 9. Causes of the increase (or decrease) of profit at different periods of time?                                                                                                                                                                        | 9. Diminution of the price of iron. In 1825 or 1826 pig iron, which now sells in New York for \$50, sold for \$70 per ton.                                                                                                                                                                                                                                                                                                                                                                                       |
| 11. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                 | 11. 300 tons of strong, soft pig iron, in quality equal to the best Scotch, value at the works \$18 per ton; 200 tons of castings, consisting of stoves, hollow ware, pot-ash kettles, and some machinery, \$70 per ton; 100 tons of refined bar iron, in quality equal to Swedes, \$90 per ton; total \$34,400. The castings are very superior in quality; being soft and malleable, the small are not readily broken, and the stoves are very little injured by heating.                                       |
| 12. Quantity and value of raw materials annually used, distinguishing between foreign and domestic products?                                                                                                                                           | 12. 3,000 tons of bog iron ore, at \$1 87½ per ton, = \$5,625; 250,000 bushels of charcoal, at 4½ cents per bushel, = \$11,250; total \$16,875—all domestic, of course.                                                                                                                                                                                                                                                                                                                                          |
| 14. Number of men, women and children employed, and average wages of each class?                                                                                                                                                                       | 14. 165 men are employed; 140 are engaged in digging and delivering ore, and in making coal; their wages are, of course, included in the prices paid for ore and coal.—See No. 12. 25 are working for wages, which will average \$1 25 per day—total per annum about \$8,000.                                                                                                                                                                                                                                    |
| 15. How many hours a day employed, and what portion of the year?                                                                                                                                                                                       | 15. Ten hours during ten months of the year.                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 16. Rate of wages of similar classes otherwise employed in the same State and county?                                                                                                                                                                  | 16. Laborers about \$10 per month and found; mechanics about \$1 25 per day, without board.                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 17. Number of horses or other animals employed?                                                                                                                                                                                                        | 17. Twenty horses, eighty oxen.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 18. Whether the manufactures find a vent at the manufactory? If not, how far they are sent to a market?                                                                                                                                                | 18. They are principally vended at the works, and never more than 150 miles therefrom.                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 19. Whether foreign articles of the like kind enter into competition with them at such place of sale, and to what extent?                                                                                                                              | 19. English, Russian, and Swedes' bar iron, and Scotch pig iron, injure our sales materially. The former may be purchased in Canada for \$50 per ton, duty 22 40, charges about \$2 60, = \$75 per ton. This is used almost exclusively for tire iron; and, though inferior in quality, takes the place of the domestic for that use to a considerable extent, precisely how far, it is impossible to say. The Scotch pig iron only enters into competition with the domestic at Utica, 70 miles from the works. |
| 20. Where are the manufactures consumed?                                                                                                                                                                                                               | 20. In Jefferson and the adjoining counties.                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 21. Whether any of the manufactures are exported to foreign countries? If so, where?                                                                                                                                                                   | 21. None.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 22. Whether the manufacture is sold by the manufacturer for cash? If on credit, at what credit? If bartered, for what?                                                                                                                                 | 22. One-fourth for cash; one-half on credit of four months; one-fourth bartered for agricultural productions.                                                                                                                                                                                                                                                                                                                                                                                                    |
| 23. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 23. The cost of manufacturing a ton of bar iron has decreased, during the last year, \$3, by a reduction of workmen's wages. During the last four years there has been a reduction of 37½ cents per ton in the price of ore.                                                                                                                                                                                                                                                                                     |

DOCUMENT 10.—No. 41—Continued.

| QUESTIONS.                                                                                                                                                                          | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>25. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?</p>                                   | <p>25. The present rate for bar iron is not a protection. Pig iron might be manufactured at a profit with a small reduction of duty on the imported of the same description.</p>                                                                                                                                                                                                                                                                                                 |
| <p>27. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?</p> | <p>27. The cost of manufacturing a ton of bar iron is as follows: pig iron 3,100 lbs. \$46 50; charcoal 300 bushels, \$15; workmen running out, \$5; workmen refining, \$10, workmen drawing into bars, \$6; blacksmith, coal stocker, and carpenter's work, 3; total \$85 50. This is exclusive of the interest on the capital employed and the expense of repairs, superintendence, &amp;c. The bar iron sells for \$90 per ton, and therefore yields scarcely any profit.</p> |
| <p>28. What amount of the agricultural productions of the county is consumed in your establishment, and what amount of other domestic productions?</p>                              | <p>The cost of manufacturing pig iron is as follows: six tons of ore, \$11 25; 250 bushels charcoal, \$11 25; wages, \$5 55; total \$28 05. Repairs, interest on capital employed, superintendence, and incidental expenses, cannot be estimated at less than \$3 50, making \$31 55 cents per ton; it sells for \$38.</p>                                                                                                                                                       |
| <p>31. If it would cause you to abandon your business, in what way you would employ your capital?</p>                                                                               | <p>28. 4,000 bushels of wheat, 1,600 bushels of rye, 1,600 bushels of corn, 8,000 bushels of potatoes, 8,000 lbs. of butter, 4,000 lbs. of cheese, 72,000 lbs of pork, 144,000 lbs. of beef, 400 tons of hay, 20,000 bushels of oats.</p>                                                                                                                                                                                                                                        |
| <p>33. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent., and how gradual should the reduction be?</p>    | <p>31. The capital invested in fixtures would be totally lost.</p>                                                                                                                                                                                                                                                                                                                                                                                                               |
| <p>35. Average rate of wages in your county?</p>                                                                                                                                    | <p>33. It has not yielded more than six per cent. heretofore.</p> <p>35. Answered under No. 16.</p>                                                                                                                                                                                                                                                                                                                                                                              |

The answers within contained, were given by Mr. Le Ray, the proprietor, and Mr. Budd, the agent of the works, on a personal interview with them.

JOHN A. DIX.

## DOCUMENT 10.—No. 42.

*Manufactory of Machinery, situate in the town of Watertown, in the County of Jefferson, in the State of New York, March, 1832.*

| QUESTIONS.                                                                                                                                                                                                                                         | ANSWERS.                                                                                              |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------|
| 1. By what power—water, steam, or what other?                                                                                                                                                                                                      | 1. Water power.                                                                                       |
| 2. When established; and whether a joint stock concern?                                                                                                                                                                                            | 2. Eighteen hundred and twenty-seven. Individual.                                                     |
| 3. Capital invested in ground and buildings, water power and machinery?                                                                                                                                                                            | 3. From five to eight thousand dollars.                                                               |
| 4. Average amount in materials, in cash for the purchase of materials, and payment of wages?                                                                                                                                                       | 4. Nine thousand dollars, as near as can be calculated.                                               |
| 6. How much of the capital is borrowed, and what interest is paid on it?                                                                                                                                                                           | 6. Two thousand dollars. 7 per cent.                                                                  |
| 7. What has been the rate of profits annually for the last three years? If a joint stock company, what dividends have been received?                                                                                                               | 7. Fluctuating; say from about 12½ per ct.                                                            |
| 9. Causes of the increase (or decrease) of profit at different periods of time?                                                                                                                                                                    | 9. The prosperous and unprosperous state of cotton and woollen manufactory.                           |
| 11. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                             | 11. Cotton and woollen machinery principally, and mill work. About ten thousand dollars.              |
| 12. Quantity and value of raw materials annually used, distinguishing between foreign and domestic products?                                                                                                                                       | 12. Principally domestic articles, American iron being altogether preferable.                         |
| 14. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                  | 14. Fifteen men generally; average wages ten shillings per day.                                       |
| 15. How many hours a day employed, and what portion of the year?                                                                                                                                                                                   | 15. Twelve or fourteen hours throughout the year.                                                     |
| 16. Rate of wages of similar classes otherwise employed in the same State and county?                                                                                                                                                              | 16. Rather less.                                                                                      |
| 17. Number of horses or other animals employed?                                                                                                                                                                                                    | 17. Three horses.                                                                                     |
| 18. Whether the manufactures find a vent at the manufactory? If not, how far they are sent to a market?                                                                                                                                            | 18. At the manufactory.                                                                               |
| 19. Whether foreign articles of the like kind enter into competition with them at such place of sale, and to what extent?                                                                                                                          | 19. They do not.                                                                                      |
| 20. Where are the manufactures consumed?                                                                                                                                                                                                           | 20. In the State of New York mostly.                                                                  |
| 21. Whether any of the manufactures are exported to foreign countries? If so, where?                                                                                                                                                               | 21. Some to Canada.                                                                                   |
| 22. Whether the manufacture is sold by the manufacturer for cash? If on credit, at what credit? If bartered, for what?                                                                                                                             | 22. Average credit of six months.                                                                     |
| 23. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or labor, and at what rate? | 23. Decreased in consequence of deduction in the price of raw materials since the tariff of 1824.     |
| 27. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                       | 27. One half labor; three-eighths stock, and one eighth profit, including wear and tear of machinery. |

| QUESTIONS.                                                                                                                                      | ANSWERS.                                                                                                  |
|-------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------|
| 28. What amount of the agricultural productions of the county is consumed in your establishment, and what amount of other domestic productions? | 28. One thousand dollars agricultural, and fifteen hundred other domestic productions, exclusive of iron. |
| 29. What quantity or amount of manufactures, such as you make, is produced in the U. States, and what amount in this State?                     | 29. Cannot say.                                                                                           |
| 35. Average rate of wages in your county?                                                                                                       | 35. Mechanics one dollar per day; farmers seventy-five cents.                                             |

GEORGE GOULDING,  
By W. A. PIERPONT.

WATERTOWN, *March 26, 1832.*

Nothing but machinery is manufactured at this establishment, and only for cotton and woollen factories and mills. The average profit is 12½ per cent.; but this includes the value of the services of the proprietor, who is himself the manager of the concern. There is, in Jefferson county, an active domestic competition in this branch of the iron manufacture.

J. A. DIX.

## DOCUMENT 10.—No. 49.

*Lord and Skinner's Manufactory of Iron Castings, situate in the town of Brownville, in the County of Jefferson, in the State of New York, March, 1832.*

| QUESTIONS.                                                                                   | ANSWERS.                                                                                                                                                            |
|----------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. By what power—water, steam, or what other?                                                | 1. Water.                                                                                                                                                           |
| 2. When established; and whether a joint stock concern?                                      | 2. 15th January, 1831. Joint stock.                                                                                                                                 |
| 3. Capital invested in ground and buildings, water power and machinery?                      | 3. \$3,500 owned by one individual of the firm. \$180 rent, yearly, by the firm.                                                                                    |
| 4. Average amount in materials, in cash for the purchase of materials, and payment of wages? | 4. 1st. \$3,000, iron and coal;<br>2d. 1,469, wages and board;<br>\$4,469, total materials, wages and board.                                                        |
| 5. Annual rate of profit on the capital invested since the establishment of the manufactory? | 5. Uncertain until we ascertain the effects of the revised laws of our State: we are apprehensive it will reduce them materially this year; otherwise 16½ per cent. |
| 6. How much of the capital is borrowed, and what interest is paid on it?                     | 6. None.                                                                                                                                                            |

\* Supposed to refer to a revision of the tariff. From the apparently large amount of profit on the capital employed, the value of the services of the proprietors should be deducted, who manage and superintend their establishment.

J. A. DIX.

| QUESTIONS.                                                                                                                                                                  | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>8. What portion of the income of the company has been converted into fixed capital, or retained for contingent or other objects, and therefore not annually divided?</p> | <p>8. All.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <p>10. Rates of profit on capital otherwise employed in the same county and State?</p>                                                                                      | <p>10. We are of opinion it will not vary much from 10 per cent.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <p>11. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?</p>                               | <p>11. 1st. 60 tons of casting annually manufactured; average price 5 cents per pound, \$6,000. 2d. Mill and machinery casting of all kinds, viz. gudgeons, mill spindles, pinions, beval wheels, shafts, crown wheels, segments, <i>knockers</i>, bails and drivers, racks and pinions, saw mill irons, carding-machine cotton mills, fulling mill, whiskey mill, cider mill, fanning mill and paper mill casting from 12 to 1 ton weight; also, ploughs, sleigh-shoes, hollow ware, andirons, stoves, cook-furnaces, smoothing irons; also, all kinds of castings for steam engines, for various purposes, and more particularly for steamboats, to *our sorrow. All first quality.</p> |
| <p>12. Quantity and value of raw materials annually used, distinguishing between foreign and domestic products?</p>                                                         | <p>12. 40 tons pig and other cast iron, \$38 per ton; domestic manufactory, \$1,360; 20 tons old iron, \$500, \$1,860<br/> Transportation 20 miles cartage, \$3 50; do 40 tons is \$140. Average cost transportation old iron, \$20, 160<br/> 40 tons Lacawanna coal, \$14 per ton; do do 560<br/> 2,000 bushels charcoal, \$4 per 100 bushels, 80<br/> Flasks, pipe clay amboy, Sturbridge brick, \$25, and other contingent expenses, 340<br/> \$3,000</p>                                                                                                                                                                                                                              |
| <p>13. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?</p>                                                      | <p>13. None imported to our knowledge; if any, cost unknown.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <p>14. Number of men, women, and children employed, and average wages of each class?</p>                                                                                    | <p>14. 1st. 5 men; and, at sundry times, a great number of small boys dressing ware—no women. 2d. 1 man, foreman, jointly concerned, \$39 per month, in year and board, \$435; 1 man \$26, loses no time, \$312, \$773. board last man \$72; 1 man, \$18, 10 months, \$180, board \$60; 1 man \$14, \$168, 480<br/> 1 man \$12 per mo., \$144, board \$72, 216<br/> \$1,469</p>                                                                                                                                                                                                                                                                                                           |
| <p>15. How many hours a day employed, and what portion of the year?</p>                                                                                                     | <p>Average wages \$21 50 per month—5 men.<br/> 15. 10 hours, and often 12—all days in the year, excepting Sundays; reference to answer to last question.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

\* The inhabitants of Brownville have been peculiarly unfortunate in a steamboat association.

| QUESTIONS.                                                                                                                                                                                                                                         | ANSWERS.                                                                                                                                                                                                                                                                            |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 16. Rate of wages of similar classes otherwise employed in the same State and county?                                                                                                                                                              | 16. Mechanics, \$15 to \$26. Farmers, \$10 to \$12; merchants \$25 to \$50; officers of the army, \$40 to \$80, and \$100; officers of civil departments, <i>very high</i> ; revenue officers, \$60 a \$100, and a proportion of spoil, &c. Average wages, competent workmen, \$20. |
| 17. Number of horses or other animals employed?                                                                                                                                                                                                    | 17. None.                                                                                                                                                                                                                                                                           |
| 18. Whether the manufactures find a vent at the manufactory? If not, how far they are sent to a market?                                                                                                                                            | 18. Home market.                                                                                                                                                                                                                                                                    |
| 19. Whether foreign articles of the like kind enter into competition with them at such place of sale? If so, to what extent?                                                                                                                       | 19. Do not.                                                                                                                                                                                                                                                                         |
| 20. Where are the manufactures consumed?                                                                                                                                                                                                           | 20. In this county and in Upper Canada.                                                                                                                                                                                                                                             |
| 21. Whether any of the manufactures are exported to foreign countries? If so, where?                                                                                                                                                               | 21. About one-twelfth of the ware manufactured at the establishment is sold at the works, and afterwards transported to Upper Canada.                                                                                                                                               |
| 22. Whether the manufacture is sold by the manufacturer for cash? If on credit, at what credit? If bartered, for what?                                                                                                                             | 22. 1st. Very little; generally on a credit from 90 days to 6 and 9 months; a great amount bartered for country produce, and often for bad paper.                                                                                                                                   |
| 23. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or labor, and at what rate? | 23. Increased about 5 per cent. within the year past, on account of an increase in the price of materials.                                                                                                                                                                          |
| 24. The prices at which the manufacture has been sold by the manufacturer since the establishment?                                                                                                                                                 | 24. 5 cents per lb.                                                                                                                                                                                                                                                                 |
| 25. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                         | 25. Imported articles do not come in competition with those manufactured by us.                                                                                                                                                                                                     |
| 26. Is any change necessary in levying or collecting duties on such articles to prevent fraud?                                                                                                                                                     | 26. We are not aware that any is necessary.                                                                                                                                                                                                                                         |
| 27. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                       | 27. About one-half expense of manufactures in materials—about one-third expense of manufactures in wages of labor and board. Balance, 16½ per cent. profits of capital.                                                                                                             |
| 28. What amount of the agricultural productions of the county is consumed in your establishment, and what amount of other domestic productions?                                                                                                    | 28. There may be about \$600 worth of agricultural productions annually consumed, and about \$400 in other domestic productions.                                                                                                                                                    |
| 29. What quantity or amount of manufactures, such as you make, is produced in the United States, and what amount in this State?                                                                                                                    | 29. To answer this interrogatory correctly would require more time and labor than we feel willing to bestow; therefore you must obtain the information wanted from some other source.                                                                                               |
| 30. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., would it cause you to abandon your business, or would you manufacture at reduced prices?                                           | 30. Perhaps neither.                                                                                                                                                                                                                                                                |

## DOCUMENT 10.—No. 43—Continued.

| QUESTIONS.                                                                                                                                                    | ANSWERS.                                                                                                                                                                                                                     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 31. If it would cause you to abandon your business, in what way would you employ your capital?                                                                | 31. Better answered when that shall take place.                                                                                                                                                                              |
| 32. Is there any pursuit in which you could engage, from which you could derive greater profits, even after a reduction of the import duties to 12½ per cent? | 32. We presume there is, but we think that the blacksmith had better "stick to his hammer and the shoemaker to his last."                                                                                                    |
| 34. Average profit of money or capital in your county?                                                                                                        | 34. Mercantile men are up to about 50 per cent.; bank stock about the same; steamboat stock 50 per cent. below par. Average profit, say 10 per cent., as a majority of moneyed capitalists are up to from 14 to 25 per cent. |
| 35. Average rate of wages in your county?                                                                                                                     | 35. Manufacturers, at \$29 per month.                                                                                                                                                                                        |

This statement exhibits 16½ per cent. profit on the first year's operations, with a capital (fixed and floating) of \$8,149, or a net income of \$1,258 16. The operatives are confined to castings. From the net income should be deducted the value of the services of the proprietors, who are managers, and the balance will be the profits of capital.

J. A. DIX.

## DOCUMENT 10.—No. 44.

*Manufactory of Wrought Iron, situate in the town of Malone, in the County of Franklin, in the State of New York, March, 1832.*

| QUESTIONS.                                                                                                                             | ANSWERS.                                                                                                                                                                                |
|----------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. By what power—water, steam, or what other?                                                                                          | 1. Propelled by water power.                                                                                                                                                            |
| 2. When established; and whether a joint stock concern?                                                                                | 2. Established in the spring of 1831, and owned by individuals.                                                                                                                         |
| 3. Capital invested in ground and buildings, water power, and machinery?                                                               | 3. About \$2,500.                                                                                                                                                                       |
| 4. Average amount in materials, in cash for the purchase of materials, and payment of wages?                                           | 4. About \$4,320.                                                                                                                                                                       |
| 5. Annual rate of profit on the capital invested since the establishment of the manufactory?                                           | 5. As the works are as yet in their infancy, the proprietors are unable to state a nicety, but think about 12½ per cent.                                                                |
| 11. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 11. This establishment makes about 60 tons bar iron per annum, worth \$80 per ton, amounting to \$4,800.                                                                                |
| 12. Quantity and value of raw materials annually used, distinguishing between foreign and domestic products?                           | 12. Consumes about 42,000 bushels coals, worth \$40, \$1,680; and near 240 tons of ore, at \$4, \$960—total \$2,640.                                                                    |
| 13. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                        | 13. This article, when imported from Russia, or an article very little superior, costs about \$87 50 to \$90 per ton.                                                                   |
| 14. Number of men, women and children employed, and average wages of each class?                                                       | 14. This forge employs 5 men in the manufacturing of iron, about 3 in raising ore, and 10 men in making coals; the bloomers' wages amount to \$1 25 per day, the colliers' to near \$1. |

## DOCUMENT 10.—No. 44.—Continued.

| QUESTIONS.                                                                                                                                                                                               | ANSWERS.                                                                                                                                                                                               |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 15. How many hours a day employed, and what portion of the year?                                                                                                                                         | 15. The work is principally done by daylight, and continued through all seasons of the year.                                                                                                           |
| 16. Rate of wages of similar classes otherwise employed in the same State and county?                                                                                                                    | 16. The wages of bloomers is from 50 to 75 per cent. higher than ordinary classes, and those of colliers some 10 or 20 per cent.                                                                       |
| 17. Number of horses or other animals employed?                                                                                                                                                          | 17. It requires to draw ore and coal three and four teams of two horses or cattle each to stock this forge.                                                                                            |
| 18. Whether the manufactures find a vent at the manufactory? If not, how far they are sent to a market?                                                                                                  | 18. Most of the iron is disposed of at the works.                                                                                                                                                      |
| 19. Whether foreign articles of the like kind enter into competition with them at such place of sale; and to what extent?                                                                                | 19. The English iron competes with this for many uses, such as tire, hoops, &c., as to price only.                                                                                                     |
| 20. Where are the manufactures consumed?                                                                                                                                                                 | 20. The manufactures are consumed principally in this and the adjoining counties.                                                                                                                      |
| 21. Whether any of the manufactures are exported to foreign countries? If so, where?                                                                                                                     | 21. Very little, and that in small sales to Lower Canada.                                                                                                                                              |
| 22. Whether the manufacture is sold by the manufacturer for cash? If on credit, at what credit? If bartered, for what?                                                                                   | 22. The sales are principally for cash and credit of 3 to 6 months, and, when bartered, for some commodity equal to cash in 6 months.                                                                  |
| 24. The prices at which the manufacture has been sold by the manufacturer since the establishment?                                                                                                       | 24. The prices of sales have varied from \$80 to \$90.                                                                                                                                                 |
| 25. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                               | 25. The present rates are quite low enough, particularly on the cheaper qualities.                                                                                                                     |
| 26. Is any change necessary in levying or collecting duties on such articles to prevent fraud?                                                                                                           | 26. The collection of duties in this section is quite as perfect as circumstances will admit.                                                                                                          |
| 30. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., would it cause you to abandon your business, or would you manufacture at reduced prices? | 30. A reduction of the duties would throw the English and other irons into competition with ours, and it is but too plain to foresee the destruction of the manufacturer should that event take place. |
| 32. Is there any pursuit in which you could engage, from which you could derive greater profits, even after a reduction of the import duties to 12½ per cent.?                                           | 32. There are many.                                                                                                                                                                                    |
| 35. Average rate of wages in your county?                                                                                                                                                                | 35. The wages of laborers in this county are from \$9 to \$12 per month for common laborers. This is, of course, exclusive of board.                                                                   |

This statement exhibits a profit of 12½ per cent. on a capital (fixed and floating) of \$6,820. Malone is nearly out of the reach of foreign competition. It is about 60 miles west of Plattsburgh, on lake Champlain, with land transportation the whole distance, and about 25 miles east of the river St. Lawrence. The amount of iron manufactured is very small, and, as will be perceived, is all consumed in Franklin and the adjacent counties.

J. A. DIX.

## DOCUMENT 10.—No. 45

*One Manufactory of Iron and one of Cloth, situate in the town of Honnysfield, in the County of Jefferson, in the State of New York, March, 1832.*

| QUESTIONS.                                                                                                                                                           | ANSWERS.                                                                                                                                                                                              |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                                                                                                      | <i>Cloth dressing.</i> <i>Furnace for castings of Iron, and machine shop.</i><br><i>Water.</i> <i>Water.</i>                                                                                          |
| 1. By what power—water, steam, or what other?                                                                                                                        | 1. Water.                                                                                                                                                                                             |
| 2. When established; and whether a joint stock concern?                                                                                                              | 2. Individual.      1831. Joint.                                                                                                                                                                      |
| 3. Capital invested in ground and buildings, water power and machinery?                                                                                              | 3. \$ 2,500.      \$ 3,800.                                                                                                                                                                           |
| 4. Average amount in materials, in cash for the purchase of materials, and payment of wages?                                                                         | 4. \$ 1,000.      \$ 3,400.                                                                                                                                                                           |
| 5. Annual rate of profit on the capital invested since the establishment of the manufactory?                                                                         | 5. Seven per cent.      Ten per cent.                                                                                                                                                                 |
| 6. How much of the capital is borrowed, and what interest is paid on it?                                                                                             | 6. None.      None.                                                                                                                                                                                   |
| 7. What has been the rate of profits annually for the last three years? If a joint stock company, what dividends have been received?                                 | 7. Profits added to capital.      The same.                                                                                                                                                           |
| 8. What portion of the income of the company has been converted into fixed capital, or retained for contingent or other objects, and therefore not annually divided? | 8. The whole.      Do.                                                                                                                                                                                |
| 10. Rates of profit on capital otherwise employed in the same county and State?                                                                                      | 10. Seven per cent.      Seven per cent.                                                                                                                                                              |
| 11. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                               | 11. At the rate of \$ 8,000 per annum— $\frac{1}{2}$ steam engine castings; $\frac{1}{2}$ saw mill, grist mill, and fulling mill castings; $\frac{1}{4}$ sleigh shoes, andirons, ploughs, stoves, &c. |
| 12. Quantity and value of raw materials annually used, distinguishing between foreign and domestic products?                                                         | 12. At the rate per annum of £0 tons iron, value \$ 2,400; 30 tons mineral coal, value \$ 330; 2,000 bushels charcoal, value \$ 100. All American.                                                    |
| 14. Number of men, women, and children, employed, and average wages of each class?                                                                                   | 14. Nine men, average \$ 1 per day.                                                                                                                                                                   |
| 15. How many hours a day employed, and what portion of the year?                                                                                                     | 15. Ten hours throughout the year, for all except the moulders, three of whom work but about eight hours.                                                                                             |
| 16. Rate of wages of similar classes otherwise employed in the same State and county?                                                                                | 16. About 75 cents per day.                                                                                                                                                                           |
| 17. Number of horses or other animals employed?                                                                                                                      | 17. None.                                                                                                                                                                                             |
| 18. Whether the manufactures find a vent at the manufactory? If not, how far they are sent to a market?                                                              | 18. In the county and Upper Canada.                                                                                                                                                                   |
| 19. Whether foreign articles of the like kind enter into competition with them at such place of sale; and to what extent?                                            | 19. In Canada, but not in the U. States.                                                                                                                                                              |
| 20. Where are the manufactures consumed?                                                                                                                             | 20. Both sides of Lake Ontario.                                                                                                                                                                       |
| 21. Whether any of the manufactures are exported to foreign countries? If so, where?                                                                                 | 21. None, except Canada.                                                                                                                                                                              |
| 22. Whether the manufacture is sold by the manufacturer for cash? If on credit, at what credit? If bartered, for what?                                               | 22. Generally six months' credit.                                                                                                                                                                     |

## DOCUMENT 10.—No. 45—Continued.

| QUESTIONS.                                                                                                                                                                                                                                             | ANSWERS.                                                                           |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------|
| 23. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 23. The cost of iron has increased about ten per cent.                             |
| 24. The prices at which the manufacture has been sold by the manufacturer since the establishment?                                                                                                                                                     | 24. At five cents per pound.                                                       |
| 25. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                             | 25. As it now is.                                                                  |
| 26. Is any change necessary in levying or collecting duties on such articles to prevent fraud?                                                                                                                                                         | 26. None.                                                                          |
| 27. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                           | 27. About $\frac{1}{2}$ materials<br>$\frac{1}{4}$ labor<br>$\frac{1}{4}$ profits. |
| 30. If the duty upon the foreign manufacture of the kind of goods which you make, were reduced to 12 $\frac{1}{2}$ per cent., would it cause you to abandon your business, or would you manufacture at reduced prices?                                 | 30. It would cause an abandonment.                                                 |
| 31. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                         | 31. It would nine-tenths be lost.                                                  |
| 32. Is there any pursuit in which you could engage, from which you could derive greater profits, even after a reduction of the import duties to 12 $\frac{1}{2}$ per cent.?                                                                            | 32. None.                                                                          |

## DOCUMENT 10.—No. 46.

*Manufactory of Cast Iron, situate in the town of Wolcott, in the County of Wayne, in the State of New York, March, 1832.*

| QUESTIONS.                                                                                   | ANSWERS.                                                                                                                                                                                        |
|----------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. By what power—water, steam, or what other?                                                | 1. Water power.                                                                                                                                                                                 |
| 2. When established; and whether a joint stock concern?                                      | 2. Established in 1821; is a joint stock.                                                                                                                                                       |
| 3. Capital invested in ground and buildings, water power and machinery?                      | 3. Seven thousand dollars.                                                                                                                                                                      |
| 4. Average amount in materials, in cash for the purchase of materials, and payment of wages? | 4. Ten thousand dollars.                                                                                                                                                                        |
| 5. Annual rate of profit on the capital invested since the establishment of the manufactory? | 5. First six years lost \$12,000, furnace burnt in that time; damage by burning probably \$2,000. Since that time we have realized a profit of about 15 per cent.; no accidents of consequence. |

| QUESTIONS.                                                                                                                                                                                                                                             | ANSWERS.                                                                                                                                                                                                                               |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 6. How much of the capital is borrowed, and what interest is paid on it?                                                                                                                                                                               | 6. Five thousand dollars at 7 per cent.                                                                                                                                                                                                |
| 8. What portion of the income of the company has been converted into fixed capital, or retained for contingent or other objects, and therefore not annually divided?                                                                                   | 8. About four thousand dollars.                                                                                                                                                                                                        |
| 11. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                 | 11. Two hundred and fifty tons; 150 tons plough castings good quality, at \$60 per ton; 60 tons hollow ware, first quality, value \$67 20 per ton, and 40 tons scrap iron valued at \$30 per ton; 300 ploughs, wooded, worth \$6 each. |
| 12. Quantity and value of raw materials annually used, distinguishing between foreign and domestic products?                                                                                                                                           | 12. About 80,000 bushels coal at \$40 per 1,000, and 800 tons ore at \$2 50 per ton, domestic.                                                                                                                                         |
| 13. Cost in the United States of similar articles of manufactory imported from abroad, and from what countries?                                                                                                                                        | 13. Unknown.                                                                                                                                                                                                                           |
| 14. Number of men, women and children employed, and average wages of each class?                                                                                                                                                                       | 14. Average, 51 men; average wages 7s. per day, adding board.                                                                                                                                                                          |
| 15. How many hours a day employed, and what portion of the year?                                                                                                                                                                                       | 15. Twelve hours per day through the year. Furnace in operation about 6 months.                                                                                                                                                        |
| 16. Rate of wages of similar classes otherwise employed in the same State and county?                                                                                                                                                                  | 16. About 6s. per day, adding board.                                                                                                                                                                                                   |
| 17. Number of horses or other animals employed?                                                                                                                                                                                                        | 17. Twelve teams employed in transporting materials.                                                                                                                                                                                   |
| 18. Whether the manufactures find a vent at the manufactory? If not, how far they are sent to a market?                                                                                                                                                | 18. Generally made to order; delivered at the factory.                                                                                                                                                                                 |
| 19. Whether foreign articles of the like kind enter into competition with them at such place of sale?                                                                                                                                                  | 19. Not to our knowledge.                                                                                                                                                                                                              |
| 20. Where are the manufactures consumed?                                                                                                                                                                                                               | 20. In the counties of Wayne, Oswego, Cayuga, Tompkins, Broome, Seneca, Tioga, Steuben, Yates, Ontario, Livingston, Monroe, and St. Lawrence, of this State, and a small portion in Canada and Michigan.                               |
| 22. Whether the manufacture is sold by the manufacturer for cash? If on credit, at what credit? If bartered, for what?                                                                                                                                 | 22. About one-third cash on delivery; the rest six months with interest, no barter.                                                                                                                                                    |
| 23. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 23. The cost has decreased about one-third both on labor and materials.                                                                                                                                                                |
| 24. The prices at which the manufacture has been sold by the manufacturer since the establishment?                                                                                                                                                     | 24. Until the last five years, manufactures were sold about double the above mentioned prices, but were principally bartered in the vicinity of the furnace.                                                                           |
| 28. What amount of the agricultural productions of the county is consumed in your establishment, and what amount of other domestic productions?                                                                                                        | 28. \$2,000 in agricultural productions.                                                                                                                                                                                               |
| 29. What quantity or amount of manufactures, such as you make, is produced in the United States, and what amount in this State?                                                                                                                        | 29. We are not qualified to state.                                                                                                                                                                                                     |

## DOCUMENT 10.—No. 46.—Continued.

| QUESTIONS.                                                                                                                                                                                               | ANSWERS.                                                                                                                                                                        |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 30. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., would it cause you to abandon your business, or would you manufacture at reduced prices? | 30. We could not sell at any reduced prices; we could not tell the effect a reduction of the tariff would have.                                                                 |
| 31. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                           | 31. Probably in agriculture.                                                                                                                                                    |
| 32. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                            | 32. The vending of merchandise, or farming.                                                                                                                                     |
| 33. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent., and how gradual should the reduction be?                                | 33. Our business is subject to so many disasters and hazards from fire, and otherwise, that 6 per cent. would be no object for us to continue. Our furnace has once been burnt. |
| 34. Average profit of money or capital in your county?                                                                                                                                                   | 34. Seven per cent. payable at 90 days.                                                                                                                                         |
| 35. Average rate of wages in your county?                                                                                                                                                                | 35. From 10 to \$12 per month in common business, board exclusive.                                                                                                              |

WOLCOTT, March 22, 1832.

Sir: The within is as full and correct a statement to the questions as we are able to give.  
Respectfully,

Mr. J. A. DIX.

Your obedient servant,

HENDRICK, SEYMOUR, & CO.

\*This statement exhibits a profit of 15 per cent. on a capital (fixed and floating) of \$17,000. It is employed principally in castings, which, for reasons elsewhere assigned, is the most profitable branch of the iron manufacture.

J. A. DIX.

## DOCUMENT 10.—No. 47.

*Manufactory of Iron, situate in the town of Ontario, in the County of Wayne, in the State of New York, March, 1832.*

| QUESTIONS.                                                                                                                             | ANSWERS.                                                                                                     |
|----------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------|
| 1. By what power—water, steam, or what other?                                                                                          | 1. Water power.                                                                                              |
| 2. When established; and whether a joint stock concern?                                                                                | 2. Established in the year 1824; owned by individuals.                                                       |
| 3. Capital invested in ground and buildings, water power and machinery?                                                                | 3. Ten thousand dollars.                                                                                     |
| 4. Average amount in materials, in cash for the purchase of materials, and payment of wages?                                           | 4. Seven thousand two hundred dollars.                                                                       |
| 11. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 11. Whole amount annually \$10,800; about two-thirds pig iron, and one-third hollow ware and other castings. |

| QUESTIONS.                                                                                                                                                                                                                                             | ANSWERS.                                                                                                                                                      |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 12. Quality and value of raw materials annually used, distinguishing between foreign and domestic products?                                                                                                                                            | 12. 1,200 tons ore, value \$1,800; 120,000 bushels coal, 3,600; total value \$5,400; all domestic.                                                            |
| 14. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                      | 14. Average number of men employed in furnace while in operation 10; average price of wages 70 cents per day.                                                 |
| 15. How many hours a day employed, and what portion of the year?                                                                                                                                                                                       | 15. Seven or eight months of the year day and night, or 24 hours a day.                                                                                       |
| 16. Rate of wages of similar classes otherwise employed in the same State and county?                                                                                                                                                                  | 16. Ten or twelve dollars per month.                                                                                                                          |
| 17. Number of horses or other animals employed?                                                                                                                                                                                                        | 17. Some part of the time engaged in drawing coal, ore, &c., from 20 to 30 horses and oxen.                                                                   |
| 18. Whether the manufactures find a vent at the manufactory? If not, how far they are sent to a market?                                                                                                                                                | 18. Sales made mostly here at the furnace; a proportion of the iron, &c. is carried from 10 to 70 miles.                                                      |
| 19. Whether foreign articles of the like kind enter into competition with them at such place of sale, and to what extent?                                                                                                                              | 19. None.                                                                                                                                                     |
| 20. Where are the manufactures consumed?                                                                                                                                                                                                               | 20. Generally in western New York.                                                                                                                            |
| 22. Whether the manufacture is sold by the manufacturer for cash? If on credit, at what credit? If bartered, for what?                                                                                                                                 | 22. Sold by manufacturers for cash; if on credit, 3 to 6 months.                                                                                              |
| 23. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 23. Gradual increase annually on the raw materials; both the ore and coal cost a little more than formerly, owing to the ore being deeper and timber scarcer. |
| 24. The prices at which the manufacture has been sold by the manufacturer since the establishment?                                                                                                                                                     | 24. Pig iron from \$30 to \$35 per ton.                                                                                                                       |
| 27. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                           | 27. About \$5,500 for raw materials, \$1,800 for wages, \$3,000 profits.                                                                                      |
| 28. What amount of the agricultural productions of the county is consumed in your establishment, and what amount of other domestic productions?                                                                                                        | 28. Provisions about \$4,000, domestic goods \$1,000; total \$5,000.                                                                                          |
| 30. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., would it cause you to abandon your business, or would you manufacture at reduced prices?                                               | 30. Could not afford to manufacture for much lower prices.                                                                                                    |
| 31. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                         | 31. We know of nothing more profitable than loaning the money, as that article appears at this time to be most in demand, and banks refuse to discount.       |
| 32. Is there any pursuit in which you could engage, from which you could derive greater profits, even after a reduction of the import duties to 12½ per cent.?                                                                                         | 32. Nothing more advantageous than shaving with the money.                                                                                                    |
| 35. Average rate of wages in your county?                                                                                                                                                                                                              | 35. Probably about \$15 per month.                                                                                                                            |

DOCUMENT 10.—No. 45.  
*ABSTRACT of the Iron Manufactories in the State of New York.—Output and Air Furnaces.*

| New York.           | County.      | Tons pig met-<br>tle. |      | Bituminous<br>coal used. |      | Anthracite coal<br>used. |      | Cords of wood. |      | Laborers. |      | Dependants. |      | Cattle. |

The above is an account of the anchors made.

This abstract was prepared by Mr. Peter Townsend, from original accounts made by himself on a personal examination. It embraces every iron establishment in the State. Mr. T. is a highly respectable gentleman, (long acquainted with this branch of American manufacture,) residing in the city of New York.

## DOCUMENT 10.—No. 49.

*Statistics of the Valley of the Ausable river, Essex and Clinton Counties, New York.*

We give particulars only for Peru, bordering the Ausable on the north; and Chesterfield, Jay, Wilmington, and Keene, touching the same river and its branches, on the south.

The village of Keeseville is situated in the valley of the Ausable river, about four miles from Lake Champlain. In this village, there are,

10 stores; 3 forge fires; 5 saw mills; 2 grist mills; 1 extensive rolling and slitting mill; 1 extensive nail factory; 1 furnace connected with an iron machine shop; 2 tanneries, one of which is extensive; 1 extensive brewery; 1 printing office; 1 tin and sheet iron manufactory; 1 woollen manufactory; 1 gun manufactory.

The village of Birmingham is about one mile below Keeseville, on the Ausable river, in which there are,

3 forge fires; 1 woollen factory; 2 saw mills; 1 store.

Clintonville is six miles above Keeseville, on the Ausable, where there are, 17 forge fires; 1 extensive rolling and slitting mill; 1 chain cable factory; 1 nail manufactory, making 2 tons of nails per day; 1 grist mill; 2 saw mills; 6 stores.

Sweden, two miles further up the river Ausable, contains,

2 stores; 3 forge fires; 2 saw mills.

Ausable Forks, 3 miles from Sweden, contains,

4 forge fires; 4 saw mills; 2 stores; 1 trip hammer.

One mile further up the river, is another extensive saw mill.

The north branch of the Ausable passes through the towns of Wilmington and Keene, on which, as well as on the south branch that runs through Jay and Keene, there are extensive iron and lumber manufactories; also, in the above towns, there are a number of mercantile establishments and smaller manufactories; the number not ascertained.

On Black Brook, two miles from the Ausable, there is an extensive saw mill, and will also be erected there during the ensuing season, 2 forges, having 6 fires. Pursuing the Port Kent and Hopkinton road west, 11 miles from the Forks of the Ausable to the falls of the Saranac, where will be erected in the spring an extensive iron establishment, the company having already contracted for the building of a forge with six fires. Six miles further up the same stream, is also another forge and saw mill in operation.

The town of Peru, in Clinton county, in which a part of the village of Keeseville is situated, contains about five thousand inhabitants, and pays about one-third of the tax of the whole county. There are on the Little Ausable river, which passes through this town, 6 forge fires, 7 saw mills, 1 woollen factory, 1 grist mill, and one blast furnace, besides several smaller factories of various kinds, and eight mercantile establishments. The town of Chesterfield, in Essex county, in which also a part of the village of Keeseville is situated, has a population of about 2000; and, on the small streams which empty into the Ausable, are four or five saw mills; and about six miles from Keeseville, in a southerly direction, is an extensive iron establishment, called the "Highland Iron Works."

Port Kent, about four miles from Keeseville, on Lake Champlain, is a place of very considerable business, being the landing and forwarding place of the valley of the Ausable, and has as extensive and permanent wharves as is to be found on Lake Champlain, with two large store-houses and two extensive mercantile establishments.

The advantageous situation of Keeseville, in the valley of the Ausable, surrounded by the villages above referred to, and the concentration and diverging of the roads to and from it in all directions, renders it the most natural and eligible place of business in the valley of Ausable.

The estimated value of the exports in iron, from the valley of the Ausable alone, during the year 1831, was about \$280,000; in lumber, \$100,000.

Within three miles of the Ausable river are two extensive iron ore beds, from one of which the ore is raised by a steam engine, and at the other, the ore is separated by Browning's patent separating machine, which ore beds sell from \$30,000 to \$40,000 worth of ore annually.

The Port Kent and Hopkinton road also passes near the bed of native steel ore lately discovered by James Duane, which promises to add much to the wealth and productive industry of the country.

Some estimate may be formed of the rapid increase of business of this section of country, from the fact that there are already under contract for erection the ensuing spring, 23 forge fires, which will add to the amount of iron business from 80 to 90 thousand dollars.

The towns of Westport, Essex, Willsborough, Lewis, and Elizabethtown, in Essex county, manufacture and export, annually, at least from 125 to \$150,000 in iron and lumber, the

## DOCUMENT 10—No. 49—Continued.

banking accommodations required for which, would necessarily be transacted at Keeseville.

It has been ascertained, from an examination of the accounts of business men in the valley of the Ausable, that within the last six months they have done business with banks to the amount of \$230,000.

This statement may be relied on with confidence, as an accurate view of the actual condition of the valley of the Ausable.

## DOCUMENT 10.—No. 50.

*Manufactories of Salt, situate in the town of Salina, in the County of Onondaga, in the State of New York, March, 1832.*

| QUESTIONS.                                                                                   | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|----------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. By what power—water, steam, or what other?                                                | 1. The pumps for supplying the manufactories with brine are propelled by the surplus waters of the Erie and Oswego canals. The salt works occupy four villages, Salina, Syracuse, Liverpool and Geddes, all in the town of Salina. At Salina there are two pumps from which the water is conveyed in logs to Syracuse, a distance of $1\frac{1}{2}$ miles, and to Liverpool, a distance of 3 miles. The village of Geddes has a separate pump to supply the works in its neighborhood. The two pumps at Salina have cost from 25 to 30 thousand dollars. |
| 2. When established; and whether a joint stock concern?                                      | 2. The grounds upon which the salt manufactories are constructed, are the property of the State. The only erections belonging to the State are pumps and machinery for supplying the manufactories with brine, for which the manufacturers pay 2 mills per bushel of salt. The lots on which the manufactories are constructed, are leased by the State to individuals for a term of years without rent, or any consideration excepting the duty of $12\frac{1}{2}$ cents per bushel (about 150 per cent. on the cost) on the salt manufactured.         |
| 3. Capital invested in ground and buildings, water power and machinery?                      | 3. There are in the four villages 135 manufactories of fine salt, containing each from 20 to 40 kettles, the capacity of which is from 90 to 150 gallons each. The cost of the erections is not less than \$350,000. There are, also, six manufactories of coarse salt, with erections to the value of about \$25,000; and about 200 acres of ground covered with vats for making salt by solar evaporation belonging to two companies, with a capital of \$75,000 each. Total investment, including pumps, about \$430,000.                             |
| 4. Average amount in materials, in cash for the purchase of materials, and payment of wages? | 4. About \$75,000 for workmen engaged in the manufacture of salt alone, and about \$75,000 for barrels, and packing, and preparing the salt for market. The sum of \$123,769 86 was paid in ten months of 1831, for duties to the State. This is, however, exclusive of salaries and expenses of superin-                                                                                                                                                                                                                                                |

## DOCUMENT 10.—No. 50.—Continued.

| QUESTIONS.                                                                                                                             | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|----------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 6. How much of the capital is borrowed, and what interest is paid on it?                                                               | tendence, &c. The actual amount of duties paid by the manufactories during the whole year was \$180,194 87. These items, added to the value of fuel consumed, amount to about \$450,000.                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 7. What has been the rate of profits annually for the last three years: if a joint stock company, what dividends have been received?   | 6. Nearly the whole amount of the capital employed for the purchase of materials, payment of wages, duties, &c., is borrowed from the banks on 90 days' paper, at 7 per cent., making something more than 7½ per cent. per annum.                                                                                                                                                                                                                                                                                                                                                                              |
| 9. Causes of the increase (or decrease) of profit at different periods of time?                                                        | 7. The profit on the capital invested, and money borrowed, after making the proper deduction for repairs, superintendence, &c., has not exceeded 8 or 9 per cent.                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 10. Rates of profit on capital otherwise employed in the same county and State?                                                        | 9. The profits have varied from time to time, but not so as to enable the fluctuations to be reduced to certainty. Among the causes the most prominent, are the great number of persons engaged in manufacturing, all having separate interests, and entering into an active competition; scarcity of fuel at some periods, and the difficulty of procuring laborers at others.                                                                                                                                                                                                                                |
| 11. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 10. The legal rate of interest is 7 per cent., and it is believed that the average rate of profit on capital otherwise employed does not differ materially from it.                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 14. Number of men, women and children employed, and average wages of each class?                                                       | 11. In 1829, 1,291,820 bushels, and in 1830, 1,435,446 bushels. In the year 1831, 1,441,559 bushels were produced. 189,000 bushels of this was coarse salt, of which 161,753 bushels were produced by solar evaporation, and the residue by artificial and solar heat combined.                                                                                                                                                                                                                                                                                                                                |
| 15. How many hours a day employed, and what portion of the year?                                                                       | 14. None but males.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 16. Rate of wages of similar classes otherwise employed in the same State and county?                                                  | 15. The coarse salt produced by solar evaporation is all made between the months of March and November, and nearly all the fine salt. Persons employed as laborers in boiling are usually paid 2 cents per bushel, and the best workmen will earn from \$1 to \$1 50 cents per day, from which they have to pay their board, amounting to \$1 75 per week. Those who pack the salt away in barrels, and prepare it for market, are paid by the barrel, and earn about as much. Their labor is very fatiguing, and exposes them to excessive heat in drawing the salt from the boiling kettles in warm weather. |
| 18. Whether the manufactures find a vent at the manufactory? If not, how far they are sent to a market?                                | 16. \$120 per annum, or \$10 per month, and their board found.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|                                                                                                                                        | 18. A small portion of the salt, say 18,000 bushels, is sold at the place of manufacture; a large portion is sent to Albany, and some to the city of New York. A considerable quantity is also sent to Vermont by the Champlain canal, about 80,000 barrels find                                                                                                                                                                                                                                                                                                                                               |

| QUESTIONS.                                                                                                                                                                                                                                                    | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>19. Whether foreign articles of the like kind enter into competition with them at such place of sale?</p>                                                                                                                                                  | <p>their way through the Erie canal to Buffalo, and thence by Lake Erie to the western part of Lake Erie, the northeastern part of Ohio, the Territory of Michigan, and the northern part of Indiana. From 12 to 15 thousand barrels are sent to Pennsylvania by way of the Susquehanna river.</p> <p>19. They do at Albany and New York, and also in Ohio and Canada. In 1831 the Canal Board found it necessary to impose an additional toll on the foreign article transported on the Erie and Champlain canals in order to countervail the reduction of the impost by the act of Congress of 29 May, 1830, and thus to protect the domestic in our own markets. The reduction of the duty on foreign salt operates as a contraction of the circle supplied by the domestic article, and the exterior of this circle is beyond the limits of the State of New York in all directions from the point of manufacture, and therefore not within the operation of its laws.</p> |
| <p>20. Where are the manufactures consumed?</p>                                                                                                                                                                                                               | <p>20. At the places where they are sent for a market. (See query 18.)</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <p>21. Whether any of the manufactures are exported to foreign countries? If so, where?</p>                                                                                                                                                                   | <p>21. About 50,000 bushels are annually sent to Canada, principally to the upper Province.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <p>22. Whether the manufacture is sold by the manufacturer for cash? If on credit, at what credit? If bartered, for what?</p>                                                                                                                                 | <p>22. In the markets to which it is sent, as specified under query 18, it is usually sold for cash. That portion which is sold at the place of manufacture, is bartered for almost every species of agricultural production.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <p>23. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?</p> | <p>23. The article of wood constitutes one of the principal items of the expense of the manufacture, and the price is gradually advancing, as that which is most convenient is consumed. It has been for the last six years \$1 25 cents per cord, but it is believed that it will, during the next six, average at least \$1 50. A gradual increase in the cost of manufacture is to be expected. So far, however, the effect has not been produced, as the construction of the Erie and Oswego canals has afforded facilities for procuring fuel which has more than counteracted the advance in price. The cost of manufacture has also been diminished by improvements in the construction of the manufactories, and the discovery of a brine of superior quality.</p>                                                                                                                                                                                                     |
| <p>24. The prices at which the manufacture has been sold by the manufacturer since the establishment?</p>                                                                                                                                                     | <p>24. From 1807 to 1812, the price of salt was from 15 to 25 cents per bushel. From 1812 to 1815 the price was about 50 cents the greater part of the time, in consequence of the high price of provisions, and all other commodities; the difficulty of procuring laborers, the increased demand for salt by the diminution of the supply of the foreign article through the interruption of commerce, and the great quantity of money thrown into</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

## QUESTIONS.

25. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?

28. What amount of the agricultural productions of the county is consumed in your establishment, and what amount of other domestic productions?

29. What quantity or amount of manufactures, such as you make, is produced in the United States, and what amount in this State?

## ANSWERS.

that part of the State which was the principal theatre of military operations. The present price is from 8 to 9 cents at the works. It is sometimes as high as 12½ cents, but quite as frequently as low as 6 cents. This is, of course, exclusive of the duty to the State.

25. The present impost (10 cents per statute bushel of 56 lbs.) is necessary to secure for the Onondaga salt a market at Albany. Indeed, it is apprehended that the foreign salt will expel it altogether. In 1831 the price of salt rose, but the reason is obvious. Although the duty on foreign salt was reduced 5 cents per bushel, there was a further prospective reduction of 5 cents, and the consequence was, that importations were delayed to a great extent, that the reduction might attain its maximum. As a prospective increase of duty on foreign articles produces a glut of the market, by inducing large importations before the increase takes effect, so a prospective decrease of duty has an opposite effect by discouraging importations until the decrease takes effect. It is believed that in 1832 the additional toll imposed by the Canal Board on foreign salt transported on the canals, will be the only protection for the domestic article north, northeast, and in the western vicinity of Albany. It should, also, have been remarked, that the want of the usual supply of foreign salt in New York in 1831, was, in some degree, produced by the great demand for shipping, in consequence of the restoration of the West India trade; a cause which will cease to operate as that demand is supplied. In the course of the summer, large and numerous return cargoes of salt may be expected.

28. About 90,000 cords of wood annually.

29. There are no other salt works in the State excepting at Montezuma, in Cayuga county. There the ground is the property of individuals, and the State has no interest except in the duty, or excise (12½ cents per bushel) to which the manufacture is subject. It appears from the amount of duty paid during the fiscal year ending on the 31st January, 1830, that the whole amount inspected was 11,481½ bushels; and during the 11 months ending the 31st December, 1830, only 3,894 bushels. No return has since been received. It is well known that much more is manufactured and fraudulently conveyed from the works without being inspected, in order to evade the duty. The brine is much weaker, and it could not, if it paid the duty,

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>30. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent, would it cause you to abandon your business, or would you manufacture at reduced prices?</p> <p>31. If it would cause you to abandon your business, in what way would you employ your capital?</p> <p>32. Is there any pursuit in which you could engage, from which you could derive greater profits, even after a reduction of the import duties to 12½ per cent?</p> <p>33. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent, and how gradual should the reduction be?</p> <p>34. Average profit of money or capital in your county?</p> <p>35. Average rate of wages in you county?</p> | <p>enter into competition with the Onondaga salt. All these circumstances have rendered the collection of the excise odious and difficult.</p> <p>30. It would cause an abandonment of the business by a portion of the manufactories by contracting the circle supplied by the domestic article, and thus diminishing the demand for it. To countervail the operation of the reduction of the impost by the act of Congress of 1830, at the exterior of the circle, measures have already been taken to amend the constitution of New York, in order to reduce the excise, or State duty, on the domestic article.</p> <p>31. The capital would, of course, be lost, so far as it is invested in fixtures. Almost every part of the manufactories is inapplicable to any other business, excepting kettles for the manufacture of fine salt, which are the common potash kettles.</p> <p>32. Almost any other.</p> <p>33. Any reduction would diminish the amount manufactured, rather than the rate of profit. This is one of the necessities of life, and the reduction of price will not so materially increase the quantity consumed, as in the case of a comfort or mere luxury, where the effect of a reduction of price is to bring it within the reach of an additional class of consumers. Although farmers and others would use it more freely at a reduced price, the most powerful stimulant of production would be an extension of the circle supplied; for the same reason, a contraction of the circle supplied is the greatest discouragement of production, and this is an inevitable consequence of a diminution of the duty on the foreign article, which is in every direction pressing upon the domestic.</p> <p>34. About equal to the <i>market</i> value of money, which fluctuates in ordinary times between 5 and 10 per cent.</p> <p>35. For laboring men \$10 per month, and board. Mechanics 12 to \$14, and board.</p> |

The answers contained herein were given by the Superintendent, and one of the principal manufacturers of the salt-works, or taken from the annual report of the Comptroller to the Legislature of New York, for 1831.

JOHN A. DIX.

I should have added that these answers were given at a personal interview with the gentleman referred to.

J. A. D.

## DOCUMENT 10.—No. 51.

*Statistics of the County along and near the Esopus creek, Ulster County, New York.*

The factories on the Esopus creek, running through the village of Ulster, at present in a flourishing condition, are—

I. An iron mill, making hoop and sheet iron, boiler and nail plate, round, square, and flat iron, of all sizes, to the amount of \$500,000 annually.

II. A paper mill, with patent machinery, supplying paper to the amount of \$150,000 yearly.

III. A paint mill, for the manufacture of white lead and other paints, now sending to market stuffs amounting to more than \$250,000 per annum, with facilities for an increase to a still larger amount.

IV. A brewery, now in successful operation, capable of making 4 or 5000 barrels of ale during the season.

V. A patent chair and sash factory, not yet in full operation, which promises to make good returns to its holders: And,

VI. A cotton and woollen factory on an immensely large scale, which is contemplated to be built during the coming season.

The commerce of West and East Camp, Glasco, Bristol, Saugerties, and Red Hook, all in the immediate neighborhood, employs 25 sloops, schooners, &c. in the exportation of country produce and manufactured articles, and in return cargoes.

The Esopus creek, a large portion of whose waters is yet unimproved, affords, for a distance of several miles, power to any extent for the driving of machinery; and its banks are such as to allow the greatest facilities for the erection of factories.

The tanneries in the neighborhood of Ulster and the adjoining towns, employ a capital of \$500,000, and centre their carrying trade in Ulster, as being the nearest to the river.

Two old and large establishments for the manufacture of glass are situated in the adjoining town, immediately back from the village.

The applicants for a charter for the bank at Ulster, are desirous that the merits of their claim should be strictly examined, and trust with great confidence in the strength of their petition.

The manufacturers and merchants of Ulster, Dutchess, and Columbia, residing in the vicinity of Ulster, derive little or no benefit from the banks at Kingston, Catskill, Hudson, and Poughkeepsie, from the expense and inconvenience attending the distance of their location.

This statement is worthy of entire credit. Two applications were made to procure answers to the queries of the Treasury Department, from the agents of the iron mill referred to, but without success.

J. A. DIX.

## DOCUMENT 10.—No. 52.

New York, April 3, 1833.

DEAR SIR: I have found more difficulty than I contemplated in obtaining information on the cost and charges of importation of foreign iron, which I mention only to account for the delay of my communication.

English common iron was held in February at £6 sterling per ton; the shipping charges, exclusive of commissions, would be 6s.; the fair freight, 12s. 6d. An English agent informs me that the average charges, including freight, have been on bar and pig about 7 dollars per ton, and this, I should think, about the mark. The selling price of this iron, is now, per cargo, 70 to 72½. Common Russia and Swedish iron costs abroad, at this time, 11 to £12, and the charges would be somewhat higher, as the freight is more. "Old Sable" about £14. The first now command 85 to 86 dollars; the last 95 to 100. Of the last, the quantity used is not large, and principally for edge tools.

I send you by this mail a copy of the iron report to the New York Convention, which contains the information then received. The returns since received lead to the belief that the entire quantity will exceed that therein stated, and that the proportions of bar iron and castings may somewhat vary.

Very respectfully, your obedient servant,

B. B. HOWELL.

Gen. DIX.

*Questions and Answers—the latter by Mr. Francis Thompson.*

| QUESTIONS.                                                                                                                                                                                                     | ANSWERS.                                                                                                                                                                                                                                                                                                                                                       |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. Is any change necessary in levying and collecting the duty on imported woollens, to prevent fraud?                                                                                                          | 1. Yes; to prevent frauds it is believed that a change from the minimums to an ad valorem duty is necessary.                                                                                                                                                                                                                                                   |
| 2. If minimums should be abolished and the duty assessed upon the actual value of the imported article in the American port, what rate of ad valorem duty would be equivalent to the present with the minimum? | 2. As a great proportion of woollens imported are invoiced to come just under the minimums, thereby paying duty of 45 per cent., and as there will always, under the minimum system, be frauds to a certain extent practised, it is believed that 35 ad 40 per cent. ad valorem will be a better protection, and yield as much revenue, as the present system. |
| 3. What would be the operation of this change upon the frauds at present supposed to be practised?                                                                                                             | 3. The change would, it is thought, prevent frauds.                                                                                                                                                                                                                                                                                                            |

## DOCUMENT 10.—No. 54.

*Opinion on a Change in the existing mode of Levying and Collecting Duties on Woollens, &c.*

WALDEN, ORANGE Co., 4th April, 1832.

DEAR SIR: I have before me your circular, with the queries proposed by the Secretary of the Treasury. As I am not a manufacturer, nor at this time interested in any, I will not attempt to give the answers to those queries, but avail of your invitation to offer my *mite* of information, in the hope that it may, in some way, be serviceable.

Nothing is more desirable to every branch of industry, than that the General Government should possess correct statistical information as to all the great interests of the country, as a basis for legislation. For, by such aids, every member of Congress would be enlightened, many gross errors avoided, and the safety of every interest be secured; but to effect this, as in every thing, the means should be equal to the end proposed; and, in my humble opinion, nothing short of a permanent Home Department, or a board of business-men at the seat of Government, expressly charged with that duty, could do justice to the subject.

Having for many years devoted much attention to the progress of manufactures in our country, and to the policy of the Government on that subject, I look with much solicitude for a *consistent course* at this time, and regret exceedingly that Congress has thought necessary, at this late hour, to commence a course of minute inquiries bearing on a subject that has been so long and so ably discussed in Congress and throughout the country. It indicates, to my apprehension, that, in the proposed revision of the tariff, gross and destructive errors may be committed from want of due information. I cannot better serve the honorable Secretary of the Treasury than by soliciting his particular attention to the reports emanating from the New York Convention, held in October last. I consider those reports as having embodied a greater mass of important *facts* bearing on the great question of the protecting policy than has ever yet been produced in this country, and that those reports are worthy of all confidence as far as they extend. That Convention embraced more than five hundred delegates from the different States—men of the first standing in society, and representing the agricultural, manufacturing, and commercial interests, with great ability. The honorable Judge Wilkins (now of the Senate) presided, and nearly the whole of the Convention were divided into committees, charged with the duty of collecting and arranging all *facts* regarding these great interests, and the operation of the protecting system upon those interests. I will venture to add, that it is hardly possible that information equally worthy of confidence can be procured from any other source in time for Congress to act upon it.

In the belief that it will be well received, I beg leave to offer to the consideration of the honorable Secretary of the Treasury the following remarks, as to the great question of such

a revision of the tariff as will reduce the revenue, and at the same time maintain protection to our national industry, and quiet the excitement at the south. That section of the country appears to labor under very mistaken views as to the *extent* of the protection by duties afforded to our manufactures: they may be satisfied by simplifying the revenue laws, and making that plain which now is not comprehended by them. I have long entertained the views lately suggested by Judge Wilkins in the Senate, and cannot perceive why they should not prevail.

First. That all ad valorem duties should be charged on the current market value of the goods in *our own markets*, at the time of importation.

Second. That all duties shall be paid in cash, before the delivery of the goods from the custom-house keys.

These simple provisions will guard against many abuses, and, being established as fixed law, I am persuaded that the duties on all cotton goods may be fixed at about 30 per cent. ad valorem, and on all woollen goods at about 40 per cent. ad valorem.

The duty of 30 per cent. on cotton goods is required to guard our citizens against the pauper-labor, overgrown capital, and the desperate struggle of the British to regain our market by overwhelming our manufacturers in the quantity of goods to be forced upon us—what they call a losing game, to gain a market. The duty of 40 per cent. on woollens (and perhaps something more) may be required for the same reasons, and further to meet the high duties on wool, indigo, and many other articles used in the manufacture, which are imposed (and justly) to encourage the growth of those articles in this country. The British have adopted the opposite policy as to all raw materials.

The duty should be charged on the value in our market, to make the amount of protection *specific and certain* to our manufacturers, and well understood by the southerners. The duties should be paid in cash, if only to break up an infamous system, based on the Government credit for duties, alike destructive to the interests of sound commerce and the interests of manufactures, and which is mainly availed of by British agents, to subserve the interests and views of their employers in flooding this country with their goods. Much, very much may be said, and *proved, abundantly*, as to this great evil of *custom-house credits*, which has been a curse to the country for more than twenty years, and is utterly unknown in any other commercial country.

To *decrease the duties on foreign manufactures* would increase the importations, and, of course, the revenue, so long as we possessed any ability to purchase. It would, moreover, palsy the industry of the country in every limb, and *divide the country by despair*. The country has asked protection against foreign rivalry; it has been discussed for more than sixteen years, and granted; the policy is considered *fixed*; the public faith rests on it for the safety of immense investments, and the support of *every interest in the community*. It therefore seems impossible that the present Congress can venture to disturb a policy under which the country has thrived, beyond all precedent even in our own history.

If *ample protection is assured* to manufacturing industry, we have abundant proof in our own experience, that *competition at home* will reduce the price of goods to the minimum, affording but fair reward for labor and capital employed in the business. This being done, we need not apprehend either *smuggling*, or too much revenue from that source. It would, therefore, seem wise to look for revenue only to such articles of import as we do *not grow*, and *cannot make* beneficially.

If high duties are deemed a *tax*, the true way to remove the tax altogether, is to *increase the duties* to the exclusion of foreign fabrics of the same kind, and thus excite, by entire confidence, a *general competition at home*. It has never yet failed to produce the effect in this country, and it has been tried in numerous articles of manufacture, which have uniformly fallen in price under a prohibitory duty on the foreign article. Such was the doctrine of Alexander Hamilton, and all experience has demonstrated its truth as to articles, the raw materials for which are the produce of the country.

I feel that I should apologise for this long explanation of the views of a private individual, having no pretensions to influence; nor desiring any, nor any other object in view but to promote the welfare of his country, by communicating the results of some experience and much thinking on a very interesting subject. I can only say that it is a subject which always excites me.

With much respect, your obedient servant,

JACOB T. WALDEN.

Gen. Dix, Albany.

## DOCUMENT 10.—No. 55.

*From the Oneida Manufacturing Society, 24th March, 1832.*

## QUESTIONS.

1. Is any change necessary in levying and collecting the duty on imported cottons, to prevent fraud?

2. If minimums should be abolished, and the duty assessed upon the actual value of the imported article in the American port, what rate of ad valorem duty would be equivalent to the present with the minimum?

3. What would be the operation of this change upon the frauds at present supposed to be practised?

4. Extent of individual and household manufacture in Oneida county, and how much it has increased since the tariff of 1824?

5. Do the persons employed at your manufactory board themselves, and what do they pay per week?

Answer to question 5. They board themselves; young women pay 8s. per week; men pay 12s. per week.

I am not sufficiently acquainted with the operation of the revenue laws to answer the first questions.

## DOCUMENT 10.—No. 56.

*ALBANY, April 19th, 1832.*

SIR: The enclosed paper has just been received. It is the result of a deliberate examination of the subject, by several highly intelligent gentlemen in the city of New York, neither manufacturers nor merchants, who were called on by General Dix for their written opinions.

I have to acknowledge your letter of 16th inst., and to say that I had anticipated your wishes, by discontinuing my inquiries and the employment of agents.

I am, very respectfully, your obedient servant,

ALVIN BRONSON.

Hon. L. McLANE, *Secretary of the Treasury, Washington.*

## DOCUMENT 10.—No. 57.

*Questions and Answers on Minimums, Frauds, &c., on Imported Woollens.**NEW YORK, 18th April, 1832.*

Question. Is any change necessary in levying and collecting the duty on imported woollens, to prevent fraud?

Answer. The value of goods at the place of purchase or exportation, by competent appraisers here, who shall have power of fixing the price, per running yard, on the best piece in the package, as the value of the whole; fixing the number of pieces to constitute a package, on which ad valorem duties shall be estimated, instead of the minimum, would not only equalize the duties among importers, but would *effectually guard* against fraud by false valuation. The appraisers having power to call for invoices, and to examine importers and consignees, and, if necessary, under oath, to gain the best possible information.

Question. If minimums should be abolished, and the duty assessed upon the actual value of the imported article in the American port, what rate of ad valorem duty would be equivalent to the present with the minimum?

Answer. If minimums are abolished, it would be difficult, if not impracticable, to decide what ad valorem duty would be equivalent to the present minimum duty per square yard, especially if the valuation is to be made at the port of entry; the amount of duty might vary in a week, on the same article, twenty-five per cent., owing to the fluctuation of the prices at the public sales. To fix the value of the goods at the port of entry, on which to calculate the duties, would be attended with such embarrassments that the officers of the customs would find their duties impracticable. The auction system so far prevails in the United States that, in a great measure, it governs the market price at the day of the sale, but the fluctuations are daily from five to twenty, and often in the course of six months, from fifty to sixty per cent.; the present time is an example of the truth of the remark. The variation of the market at different ports of entry may be from twenty to fifty per cent., so that

a merchant in Charleston may pay at the same time, on the same article, twenty five per cent. more duty than a merchant in New York. Besides, who is to decide the value of the goods at the port of entry? Surely not men confined to custom-houses and public stores, but active merchants, and their opinions would be about as various as their numbers. If any appeal was allowed from the valuation of the appraisers, (as doubtless there would be) it would become endless, and half the merchants in the ports would be in requisition to fix the market value of the goods imported, and the port of New York would require an hundred stores to accommodate them. A merchant might to day enter a package of cloths appraised at \$4 per yard—say he is to pay 45 per cent. ad val.; but next week, when his goods are ready for sale, the auctions have reduced the market in the mean time on the same kind of goods to \$3 per square yard, so that he would, in fact, pay about sixty per cent. instead of forty-five per cent. ad valorem duty. No merchant could calculate within ten to twenty per cent. what amount of duties he would have to pay on his importations. In fact, all estimates of duties would be wholly contingent and dependant on circumstances over which there could be no control, and neither the merchant or Government could form any just estimates. Difficulties might be suggested, almost without number, against the plan of estimating the market value at the port of entry on which to calculate the duties. The fluctuations in the United States are more often to the extent of twenty-five per cent., owing to the auction system, than they are in foreign markets, of five per cent. in the same time.

Question. What would be the operation of this change upon the frauds at present supposed to be practised?

Answer. This question has, in a great measure, been anticipated. The appraisers fixing the cost of the goods in the foreign market on which the duties are to be estimated, would be an effectual guard against false invoices, false valuation, and false swearing. To effect this object, an agent ought to be established to give the state of the foreign market from time to time, as changes take place; but if the valuation was fixed at the port of entry in the United States, the law could not be carried into operation, for the reasons stated in answer to the second interrogation.

# MANUFACTURES.

## RETURNS FROM THE STATE OF NEW JERSEY.

### DOCUMENT 11.—No. 1.

NEW PROSPECT, *April 28th*, 1832.

SIR: Immediately on receipt of your instructions, I repaired to Paterson, where the greatest number of cotton factories in the State are located, and, as soon as possible, had a number of circulars printed, which I delivered to the principal manufacturers, who promised to immediately attend to answering the several queries. I also went to all the calico printing establishments in our State, most of the woollen and also the iron works, sending circulars by mail to those factories more distant; and, although I have made use of every reason, urgent and persuasive, I have not been able to obtain from the principal manufacturers explicit and full answers until this late period, many from want of information—some from apprehension of exposing the secrets of their business, others from unpardonable dilatory negligence. It is matter of extreme regret that, on questions of so great importance, such supineness and manifest want of frankness should exist, as you will perceive by the originals, which I herewith forward. Finding it wholly impossible to obtain from the owners or agents the desired information, I called on the committee appointed to collect information for the Tariff Convention, and have, from necessity, filled up the tabular statement from their calculations, to give as full and satisfactory a statement as it is possible to procure. I have the greatest confidence in the correctness of the statements of these gentlemen, as it was obtained with great care and labor; and, from a personal knowledge, I have the greatest reliance on their judgment and honesty of intentions.

The business of cotton spinning for the last two years has been profitable, and the increase of new establishments has progressed in proportion to the apparent advances of lucrative investment; but, within the last three months, a depreciation has taken place in the price of yarns and cotton goods fully equal to 25 per cent. This has arisen partly from home competition, but more from the introduction of European productions. The prices of the domestic article at present in the market are below what they ever before sold for, and considerably below the prices of Manchester or Glasgow. Had the advance of manufactures continued for a few years in a ratio proportionate to the two last, there can remain no doubt that the article would have been furnished to the consumer at the lowest possible value.

It was gratifying to observe the increase of establishments, and the rapid advance in new inventions, and improvements in the perfectability of the new machinery for the saving of labor, when the home competition would soon have supplied the wants of the country at the lowest price possible: for it may be considered as an axiom in political economy, that, whenever any article manufactured in the country arrives at the maximum of supply, the article descends to the minimum value that human labor can produce it at. Such has been the result with a number of manufacturers, such as cut nails, coarse cottons, and a number of others. It would, therefore, be the true policy of Government to give such encouragement and direction to the industry of the nation as to call into operation the dormant resources of its vegetable, fossil, and mineral productions so as to render it independent of the world for the first necessities of existence, food, clothing, and defence.

Commerce, as it has ever existed in this country, owing to the changes and vacillating policy of European Governments, has rendered the mercantile pursuit a game of hazard, and has had a deteriorating effect upon the morals of community, injurious to the independence and interests of society. The commerce between the States in those exchanges of the labors of each, becoming more and more permanent and universal, by each supplying the other's wants, will give a permanency to the Government and our institutions beyond the reach of European influence.

The progress of the manufacture of cotton since the tariff of 1816, presents a number of remarkable facts worthy of observation.

1st. As it respects the reduction of prices, with the causes.—When the manufacturers became confident of the protection of Government, they embarked with confidence in the re-establishing the manufactories that had become unprofitable. After peace, the inventive genius of the country was called into operation to perfect and improve the machinery, to reduce the cost of manufactures; and their success has been productive of the most fortunate results. The increased improvements can be best explained by comparing the difference of prices: 1st. The spindles that, in 1815, turned off  $1\frac{1}{2}$  or 2 hanks per day, in 1824 was capable of producing from 4 to 6 hanks of the same number of yarn, and the present improved spindle is spinning  $8\frac{1}{2}$  hanks of the same number. The price was reduced in an equal ratio; as proof, No. 20 then, 1815, sold at one dollar per pound, and in 1829 at 20 cents. The improvement of warping, sizing, and in weaving, has kept pace with spinning, as the yard of muslin then sold at 35 cents and  $37\frac{1}{2}$  cents, and, in 1829, sold for 5 and 6 cents. Such are the effects arising from the paternal fostering protection of Government, and not from frigid, unproductive necessity. Necessity is not, therefore, the mother of invention; it is for Government to call forth the latent energy of the inventive genius of a people, by a judicious guarantee to ingenuity and industrious enterprise.

The advancement in the woollen manufacture has been equal to the cotton. New invented machinery in spinning and weaving has reduced prices proportionate to the cotton; but should an injudicious modification of the tariff check the aspiring exertions, so rapidly advancing to perfection, there is no calculating the disastrous results. Machinery is yet in its incipient stages, but, infantile as they are, have advanced beyond the present state in Great Britain. A gentleman who has just returned from a year's residence in England informs me he was astonished at the backward state of machinery in that country. Upon inquiry, the spindle, in the largest factories, did not average more than two hanks per day. It is these improvements, protected as they have been, that enables our manufacturers to contend with the low price of labor and large capital of Britain; and, comparing the price current of Manchester and Glasgow with Philadelphia and New York, the prices of the latter are from 4 to 6 cents below the former. But should the modification of the tariff compel those who have at present embarked the whole of their capital and credits, to give up the business, it will require a long period to restore the losses sustained, and inspire confidence in others to again embark in so unfortunate and unpropitious an adventure.

You will observe, that, in the schedule as returned, many mills are returned with nothing but the capital invested. I called on the owners, who gave me the return as rendered, which includes site, building, and machinery contracted for.

All which is respectfully submitted.

I am, respectfully, your obedient servant,

CHAS. KINSEY.

To the Hon. Louis McLANE,

*Secretary of the Treasury of the United States.*

### DOCUMENT 11.—No. 9.

*Cotton Mill, New Prospect, Bergen County, New Jersey, March 6, 1832.*

| QUESTIONS.                                                                                       | ANSWERS.                                                                     |
|--------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                        | 1. New Jersey, Bergen county.                                                |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?             | 2. One cotton mill, spinning, drove by water power.                          |
| 3. When established; and whether a joint stock concern?                                          | 3. Established in 1831. Individual concern.                                  |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                  | 4. Capital in ground, buildings, power, \$6,000; machinery, \$10,000.        |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages. | 5. Materials and cash paid for materials, \$11,000; wages \$4,000 per annum. |

| QUESTIONS.                                                                                                                                                                                                                                                                                                       | ANSWERS.                                                                                                                                                                                                                                                                                                              |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>6. Annual rate of profit on the capital invested, since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of the profit upon that portion which is not borrowed?</p> | <p>6. Have not been in operation more than twelve months.</p>                                                                                                                                                                                                                                                         |
| <p>7. Cause of the increase (or decrease, as the case may be) of profit?</p>                                                                                                                                                                                                                                     | <p>7. Fluctuations in the public mind; scarcity of money; excess of competition; forced sales at auction; heavy importations have the effect of destroying regular sales, and increasing the stock of the manufacturer, obliging to sell at reduced prices and at an extended credit; want of confidence, &amp;c.</p> |
| <p>8. Rates of profit on capital otherwise employed in the same State and county?</p>                                                                                                                                                                                                                            | <p>8. Variable, at from 3 to 12 per cent.</p>                                                                                                                                                                                                                                                                         |
| <p>9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?</p>                                                                                                                                                                     | <p>9. At the rate of 60,000 lbs. yarn per annum, from 26 to 35 cents; sold to weavers, by whom the yarn is made into goods, at an advance of from <math>\frac{1}{4}</math> to <math>\frac{1}{2}</math>.</p>                                                                                                           |
| <p>10. Quantity and value of different kinds of raw materials used, distinguishing between foreign products and domestic products?</p>                                                                                                                                                                           | <p>10. Cotton to make 60,000 lbs. yarn, adding the waste, from 10 to 12 per cent., at from 11 to 12<math>\frac{1}{2}</math> cents.</p>                                                                                                                                                                                |
| <p>11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?</p>                                                                                                                                                                                           | <p>11. We know of no yarn to any amount imported, but the importation of goods oblige the weavers to curtail their business, and limit the sale of yarn.</p>                                                                                                                                                          |
| <p>12. Number of men, women, and children employed, and average wages of each class?</p>                                                                                                                                                                                                                         | <p>12. Two men, at \$5 weekly; 9 girls at \$3; and 19 girls and boys at \$2; together with our own attention personally.</p>                                                                                                                                                                                          |
| <p>13. How many hours a day employed, and what portion of the year?</p>                                                                                                                                                                                                                                          | <p>13. Twenty-two hours; two set of hands relieve each other alternately.</p>                                                                                                                                                                                                                                         |
| <p>14. Rate of wages of similar classes otherwise employed, in the same State and county, in other States, and in foreign countries?</p>                                                                                                                                                                         | <p>14. Various: wages is governed by the same principles as business, in general: if laborers are in demand, wages rise; if employment is wanted, labor will fall in proportion: price of provisions also have an effect on the price of labor, in some countries—the comfort of the people are abridged.</p>         |
| <p>15. Number of horses or other animals employed?</p>                                                                                                                                                                                                                                                           | <p>15. Two horses.</p>                                                                                                                                                                                                                                                                                                |
| <p>16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?</p>                                                                                                                                                                                                 | <p>16. Sold in New York, 22 miles, and at Philadelphia.</p>                                                                                                                                                                                                                                                           |
| <p>17. Whether foreign articles of the like kind enter into competition with them at such place of sale, and to what extent?</p>                                                                                                                                                                                 | <p>17. To a great extent, at auction.</p>                                                                                                                                                                                                                                                                             |
| <p>18. Where are the manufactures consumed?</p>                                                                                                                                                                                                                                                                  | <p>18. United States, principally.</p>                                                                                                                                                                                                                                                                                |
| <p>19. Whether any of the manufactures are exported to foreign countries? and, if so, where?</p>                                                                                                                                                                                                                 | <p>19. Sold by commission, at 4 to 8 months credit; 5 per cent commission and guarantee.</p>                                                                                                                                                                                                                          |
| <p>21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?</p>                                               | <p>21. Price of labor variable; materials also vary like all other goods or produce, occasioned by supply and demand.</p>                                                                                                                                                                                             |

## QUESTIONS.

22. The prices at which the manufactures have been sold by the manufacturer since the establishment?

23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?

26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?

27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?

29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?

30. If it would cause you to abandon your business, in what way would you employ your capital?

31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?

33. Amount of capital, and what proportion the borrowed capital bears to that which is real?

34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of six per cent. and how gradual the reduction should be?

36. What would be the operation of this change upon the frauds at present supposed to be practised?

38. Extent of individual and household manufacture in the United States, and how much it has increased since the tariff of 1824?

39. Average profit of money or capital in the United States?

## ANSWERS.

22. In 1831 yarns brought 10 cents above the No. 1; at present it is selling at 6 cents; it brought, in 1819, 26 cents above the No. 1; the cause is the improvement of machinery and competition.

23. Present tariff duties.

26. See 5th and 12th queries.

27. Leather for belts, coal 12 tons, wood, sheep skins, calf skins, oil 900 gallons, glue, cloth, brooms, brushes, bobbins, twine, paper.

29. Abandon it certainly, as a shipwrecked mariner would abandon a raft, although he should be made a prisoner.

30. In no other way than having none left. If we have to abandon it, who would purchase? We have been long engaged in the business. Our occupation would be gone.

31. Our property would be the most unprofitable stock in the United States. we could not sell it.

33. The capital invested in machinery is fixed; it cannot be changed or converted to any other purpose than it was constructed for; if not in operation it is useless.

34. The present rate of tariff duties have encouraged the manufacturers to extend their business in other channels, particularly to printing calicoes, which has increased the demand for goods for printing; should these establishments cease, competition would be excessive in other goods.

36. Frauds are more supposed than real; but we are certain that goods are manufactured on purpose for this market of very inferior stock, which is fraud on the consumer.

38. Cotton goods have, in a great measure, superseded linen, which whilom was the principal household manufacture in this part of the country. The market afforded the farmer and mechanic for their produce or industry, enable them to purchase goods for less per yard than it formerly cost to have the flax spun; besides, such as used to go out to spin, &c., have employment at the factories.

39. Six per cent. lawful interest in New Jersey, eight per cent. in Georgia.

## DOCUMENT 11.—No. 2—Continued.

| QUESTIONS.                 | ANSWERS.            |
|----------------------------|---------------------|
| 40. Average rate of wages? | 40. See query 12th. |

In addition to query 38, we would add that the establishment of manufactories of different descriptions in this country, has enabled the farmer to sell his produce to the mechanic, and those engaged in the factories. This portion of the population being drawn off from agriculture, are consumers instead of producers; a market is therefore created for provisions, and enables all classes to purchase goods which they were obliged formerly to make themselves, at a great disadvantage. This has had the effect to increase the consumption of manufactured goods, cotton particularly, inasmuch as cotton shirtings or sheetings can be purchased for 6 cents to 12 cents per yard, and the means to purchase are in his power, by the market created for his produce or the proceeds of his business or trade; employment is thus given people of different trades and occupations. Household manufactures of wool, linen, and linsey-woolsey, have been diminished and given up, in a great measure. Flax is rarely seen, whereas fifteen or twenty years ago it was cultivated in great quantities. Within the same space of time cotton goods have declined in price at least one-half. This is no doubt owing to the increase of the supply of cotton, and consequent decline of price, although in a far less proportion than the decline of the price of goods. The improvement in machinery, both in this country and Europe, together with experience and skill, has enabled manufacturers to furnish goods at one-half what they could be made for fifteen or twenty years since.

As respects the rates of wages, we know that the wages given in some foreign countries is barely sufficient to enable the operatives to live, and should be sorry to see the same thing in this country. Some establishments here pay higher wages than others; that is, to a hard say of the same size and age; but select hands, such as are enabled to tend more machinery, will command an advance in proportion to their dexterity. Some would be cheaper at \$1 per week than others at \$1. In large establishments there is a large number of the latter.

PETER PRALL & BROTHERS.

*Munn & Whithead's Statement of Cotton Manufactory, Godwinville, Bergen County, New Jersey, March 6, 1832.*

| QUESTIONS.                                                                                                                                                                                                                                                                                               | ANSWERS.                                                                                                                 |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                                | 1. New Jersey, Bergen county.                                                                                            |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                     | 2. Cotton manufactory and sizing establishment; water power.                                                             |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                                  | 3. Established 1826; joint stock company.                                                                                |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                          | 4. Capital of buildings and water power \$16,160; cotton machinery, \$37,000; sizing establishment, \$1,000.             |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                                                                                                                                                                                         | 5. Cotton, oil, leather, &c., \$45,550; wages, \$10,100; flour, wood, &c., \$2,080; wages in sizing department, \$1,100. |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory, distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of the profit upon that portion which is not borrowed? | 6. After having provided for the interest of capital invested, leaves three per cent profit yearly.                      |

## QUESTIONS.

9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?

10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?

12. Number of men, women and children employed, and average wages of each class?

13. How many hours a day employed; and what portion of the year?

15. Number of horses or other animals employed?

16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?

18. Where are the manufactures consumed?

19. Whether any of the manufactures are exported to foreign countries? and if so, where?

20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?

21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?

22. The prices at which the manufactures have been sold by the manufacturer since the establishment?

23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?

27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?

29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?

30. If it would cause you to abandon your business, in what way would you employ your capital?

33. Amount of capital, and what proportion the borrowed capital bears to that which is real?

## ANSWERS.

9. 250,000 lbs. yarns, from No. 8 to 18, amounting on an average to \$54,300; 17,500 lbs. filling fustian, at 14 to 16 cts., amounting to \$2,625; 19,200 yards fustian, averaging 19 cents, amounting to \$3,648.

10. 275,000 lbs. cotton, at from 13½ cts. to 9 cts., average amount \$27,500; 36,134 lbs. waste, from 6 cts. to 4 cts., amounting average \$1,800; 3,000 warps, amounting to \$700; fustian filling, 9,600 lbs., at 14 to 16 cents, amounting, average, \$1,440.

12. 15 men, at \$6 per week; 9 women, at 20s. do.; 76 children at 9s. 6d. per do.

13. About 12 hours; perhaps 50 weeks annually.

15. 5 horses.

16. 22 miles from New York, 118 miles from Philadelphia. The greater proportion of merchandise is sent to the latter place.

18. United States.

19. Mexico and South America has afforded a market for some particular kinds of goods; likewise, the East Indies some few descriptions.

20. Sold at 6 and 8 months' credit; commission, guarantee, interest, &c., being expense of sales, amounting to \$7,200 annually.

21. The raw material has advanced regularly for the last two years, 9 to 10 per cent. annually; labor from 5 to 10 per cent.

22. See No. 9.

23. See profits of business, as above stated.

27. 25 tons coal, 250 cords wood, 200 bls. wheat; lamp oil, 750 gals.; cloth, woollen, \$150; belt leather, roller and lace do. \$200 annually.

29. Must shut up shop.

30. We should have none to invest, as capital invested in machinery would be of no value, as the property in that case would not be convertible.

33. See query No. 4, and No. 6.

## DOCUMENT 11.—No. 3.—Continued.

| QUESTIONS.                                                                                                                                                               | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                 |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent. and how gradual the reduction should be? | 34. No reduction could be made without being prejudicial to the manufacturer, as we have, with present tariff duties, realized, after paying interest on investments, a net profit of but 3 per cent.; and even from that small contingent fund, we have to make heavy drafts in order to replace machinery which will become useless from wear and tear in a few years. |

MUNN &amp; WHITEHEAD.

| QUESTIONS.                                                                                                                                                                                                                                                              | ANSWERS.                                                                                |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                               | 1. New Jersey, Bergen county.                                                           |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                    | 2. Bleaching and Calico printing; water power.                                          |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                 | 3. In 1831; individual.                                                                 |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                         | 4. \$15,000.                                                                            |
| 12. Number of men, women and children employed, and average wages of each class?                                                                                                                                                                                        | 12. 25 men, averaging \$7 per week; and 20 children, averaging \$1 25.                  |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                                        | 13. 10 hours the year round.                                                            |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                         | 15. Two horses.                                                                         |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                               | 16. 12 miles from market.                                                               |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                | 18. United States.                                                                      |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. An abandonment of the business would be preferable to continuing at reduced prices. |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                          | 30. In that event, no capital could be realized to employ in any way.                   |
| 37. Proportion which the production by the American manufacturers bears to the consumption?                                                                                                                                                                             | 37. From one-half to two-thirds, (supposed.)                                            |

LOOM PRINT WORKS, 26th March, 1832.

SIR: Annexed you have the only answers that I deem within my power to give: the very recent establishment of the business precludes me from answering more.

I am, most respectfully,

Your obedient servant,

JAMES RENNIE.

*John Travers' Statement of a Manufacture of Canvas, in Paterson, Essex Co., New Jersey.*

| QUESTIONS.                                                                                                                                                                                                                                                                                               | ANSWERS.                                                                                                                                                                                             |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                                | 1. Paterson, county of Essex, State of New Jersey.                                                                                                                                                   |
| 2. Kind or description of the manufactory, and whether water, steam, or other power?                                                                                                                                                                                                                     | 2. For the manufacture of hemp and flax; mill driven by water.                                                                                                                                       |
| 3. When established, and whether a joint stock concern?                                                                                                                                                                                                                                                  | 3. Previously to 1824, owned by individuals; that year it was incorporated, and is now a joint stock company.                                                                                        |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                          | 4. \$170,000 is the cost of the mill and machinery.                                                                                                                                                  |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                                                                                                                                                                                         | 5. 600,000 lbs. of flax is the quantity consumed; and it costs, delivered, about 10½ cts. per lb. The wages amount to 54,000 dollars per annum.                                                      |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory, distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of the profit upon that portion which is not borrowed? | 6. We have never divided a cent since we started. The stock is at 33½ per cent.                                                                                                                      |
| 7. Cause of the increase, or decrease, as the case may be, of profit?                                                                                                                                                                                                                                    | 7. The mill has been stopped the last six months on account of importations of flax being stopped from the high duty, and the impossibility, from short crops, of getting native.                    |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                           | 8. Not having done more than paid our debts, we are stopped altogether, owing to the high duty on the raw material, which benefits no one. American flax cannot be used for the same use as foreign. |
| 9. Amount of articles annually manufactured since the establishment of the manufactory; description, quality, and value of each kind?                                                                                                                                                                    | 9. I have made since 1821, about 50,000 bolts of canvas, and about 20,000 bolts of cotton bagging.                                                                                                   |
| 10. Quantity and value of different kinds of raw materials used, distinguishing between foreign products and domestic products?                                                                                                                                                                          | 10. The quantity of raw material as above, of which as much is native as we can procure, having a standing advertisement in five or six papers.                                                      |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                          | 11. Foreign duck, Russia, \$19½ per bolt; Holland, \$25 per bolt.                                                                                                                                    |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                        | 12. When in operation, 138 men, at 65 cts. per day; 42 boys, at \$1 37½ per week; 61 women, at \$2 37½ per week; 53 girls, at \$1 37½ per week—about 29½ in all.                                     |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                         | 13. All the year round, average 12 hours; in winter less, in summer more.                                                                                                                            |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                         | 14. The difference in wages, in manufacturing flax here and in England, is nearly 40 per cent. The men at other work here can earn 6s. and 7s. per day. The girls and boys have no other employment. |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                          | 15. Only one horse; the teaming is done by contract.                                                                                                                                                 |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                                | 16. Sent to New York, (navy yard principally.) The cotton bagging goes to Augusta, Georgia.                                                                                                          |

## QUESTIONS.

17. Whether foreign articles of the like kind enter into competition with them at such place of sale, and to what extent?

18. Where are the manufactures consumed?

19. Whether any of the manufactures are exported to foreign countries, and if so, where?

20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?

21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?

22. The prices at which the manufactures have been sold by the manufacturer since the establishment?

23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?

24. Is any change necessary in levying or collecting the duty on such articles, to prevent fraud?

25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and, therefore, not divided out annually?

26. What portion of the cost of your manufactures consist of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?

27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?

28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?

## ANSWERS.

17. Foreign duck and cotton bagging would not have competed with us, if the duty on foreign flax could have been procured.

18. On the national and merchant shipping; principally by the former.

19. Sometimes a small quantity to South America, and round Cape Horn.

20. Sold on a credit of 4 and 6 months.

21. The increase of cost of the raw material has been gradually advancing the cost of the manufactured article. We have tried to compensate for the duty by inventing and adopting economical machinery.

22. We commenced selling at \$2 50, and we reduced it to \$13 50 per bolt for canvass; cotton bagging, 19 cents per yard, weighing 1 1/2 lbs. to the yard.

23. The present duty on the manufactured article of duck and cotton bagging is sufficient protection. Take the duty off of flax, and protect all kinds of thread and twine, and coarse goods generally, say 30 per cent. ad valorem.

24. Duck, viz. light duck, is introduced as sheetings. All this has been explained to the Treasury Department; and, again, our ships get their supplies not unfrequently abroad. If the duty were laid on canvass, "whether in use or not," it would prevent this. The making of the sails is lost, as also the manufacture thereof.

25. We have not made any dividend, and are, we believe, the only flax factory now in operation. Within three years there has been a general breaking up. We make canvass for the navy, and they find it their interest to sustain us.

26. A bolt of No. 1 duck contains in the proportion of \$10 of raw material to \$6 of labor, supposing it to cost \$16, or as \$5 to \$3.

27. I cannot tell; never made any estimate.

28. They have all failed or stopped for want of raw material. I can make 10 m. bolts of duck, and 2 m. cotton bagging, equal to bolts, 12,000.

| QUESTIONS.                                                                                                                                                                                                                                                                      | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>29. If the duty upon the foreign manufacture of the kind of goods which you make, were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?</p> | <p>29. Not having any hope of permanency in any other article of manufacture than cotton, we have agreed to sink 57,000 dollars, and put in cotton machinery in the mill: just keeping a sufficient flax machinery for the use of the navy; and if they do not think it worth while to encourage that, we will abandon it altogether. If the duty be taken off the flax, we can get along very well. We want no additional duties on bagging or canvass. The great interests of the country are not looked at. Every man legislates in Congress for the particular district he represents, and all the information which is procured on that subject, is of no avail.</p> |
| <p>31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?</p>                                                                                                            | <p>31. This is answered above. I could engage in any, and every thing, provided its success would depend on my own exertions, and not on laws of Congress.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

## DOCUMENT 11.—No. 6.

*John W. Berry's Statement of Cotton Manufactory, situate in the town of Paterson, in the County of Essex, in the State of New Jersey.*

| QUESTIONS.                                                                                                                                                                                                                                                                                                      | ANSWERS.                                                                                                                                                                           |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>1. State and county in which the manufactory is situated?</p>                                                                                                                                                                                                                                                | <p>1. New Jersey, Essex county.</p>                                                                                                                                                |
| <p>2. Kind or description of manufactory; and whether water, steam, or other power?</p>                                                                                                                                                                                                                         | <p>2. Cotton. Water power.</p>                                                                                                                                                     |
| <p>3. When established, and whether a joint stock concern?</p>                                                                                                                                                                                                                                                  | <p>3. 1814. Private concern.</p>                                                                                                                                                   |
| <p>4. Capital invested in ground and buildings, and water power, and in machinery?</p>                                                                                                                                                                                                                          | <p>4. Eighty thousand dollars.</p>                                                                                                                                                 |
| <p>5. Average amount in materials, and in cash for the purchase of materials, and payment of wages?</p>                                                                                                                                                                                                         | <p>5. Wages, annually, \$15,000; materials, and cash paid for materials, \$20,000.</p>                                                                                             |
| <p>6. Annual rate of profit on the capital invested since the establishment of the manufactory, distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of the profit upon that portion which is not borrowed?</p> | <p>6. Annual rate of profit five per cent.</p>                                                                                                                                     |
| <p>7. Cause of the increase, (or decrease, as the case may be,) of profit?</p>                                                                                                                                                                                                                                  | <p>7. Fluctuation in the public mind, from want of confidence in unanimity of the Government to protect our infant manufactures; scarcity of money, and excess of competition.</p> |
| <p>8. Rates of profit on capital otherwise employed in the same State and county?</p>                                                                                                                                                                                                                           | <p>8. Variable, from three to eight per cent.</p>                                                                                                                                  |

| QUESTIONS.                                                                                                                                                                                                                                                              | ANSWERS.                                                                                                                                                                                                                                                                   |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                   | 9. Yarn, 100,000 pounds, from 17 to 50 cents; cotton 116,000 pounds, from 32 to 10 cents.                                                                                                                                                                                  |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                       | 12. Twelve men at \$7, weekly; 100 boys and girls at \$2, weekly.                                                                                                                                                                                                          |
| 13. How many hours a day employed? and what portion of the year?                                                                                                                                                                                                        | 13. Average 11½ hours per day; average 50 weeks to the year.                                                                                                                                                                                                               |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                         | 15. Three horses.                                                                                                                                                                                                                                                          |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                               | 16. New York and Philadelphia; 16 and 100 miles.                                                                                                                                                                                                                           |
| 17. Whether foreign articles of the like kind enter into competition with them at such place of sale; and to what extent?                                                                                                                                               | 17. To a large extent at auction.                                                                                                                                                                                                                                          |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                | 18. United States, and exported to South America.                                                                                                                                                                                                                          |
| 20. Whether the manufacture is sold by the manufacturer for cash? and, if on credit, at what credit? if bartered, for what?                                                                                                                                             | 20. Sold by commission at 6 to 8 months' credit; 5 to 7½ per cent. commission and guarantee.                                                                                                                                                                               |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?             | 21. The fluctuations of the market have been against the manufacturer in the materials; price of labor variable, from 5 to 10 per cent.                                                                                                                                    |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                    | 22. Yarn from 50 to 17 cents per pound.                                                                                                                                                                                                                                    |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition, in the home market, with similar articles imported?                                                                                                                            | 23. Present tariff duties.                                                                                                                                                                                                                                                 |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                        | 27. Mostly domestic.                                                                                                                                                                                                                                                       |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. Most certainly abandon it, or be ruined.                                                                                                                                                                                                                               |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                          | 30. If I were to abandon it, where would I find a purchaser?                                                                                                                                                                                                               |
| 35. If minimums should be abolished, and the duty assessed upon the actual value of the imported article in the American port, what rate of duty would be equivalent to the present with the minimum?                                                                   | 35. Present rate of duties, which has for its object the encouragement of our manufactures, should continue, all others should be abandoned. The most of the manufacturer's capital is perishable, as machinery, &c.; he would require 12 per cent. as equal remuneration. |
| 36. What would be the operation of this change upon the frauds at present supposed to be practised?                                                                                                                                                                     | 36. Frauds are more supposed than real.                                                                                                                                                                                                                                    |

## DOCUMENT 11.—No. 7.

*Bleaching and Printing Establishment, situate in Acquanonk, in the County of Essex, in the State of New Jersey.*

| QUESTIONS.                                                                                                                | ANSWERS.                                                             |
|---------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                 | 1. State of New Jersey, county of Essex.                             |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                      | 2. Bleaching and printing. Water power.                              |
| 3. When established, and whether a joint stock concern?                                                                   | 3. Established in 1828. Not a joint stock.                           |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                           | 4. In ground and buildings \$9,000; machinery.                       |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                          | 5. Twenty-five hundred dollars.                                      |
| 12. Number of men, women, and children employed, and average wages of each class?                                         | 12. 20 men, at \$7 per week; 14 women and children, at \$3 per week. |
| 13. How many hours a day employed, and what portion of the year?                                                          | 13. Ten hours per day.                                               |
| 15. Number of horses or other animals employed?                                                                           | 15. Three horses.                                                    |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                 | 16. Sent ten miles.                                                  |
| 17. Whether foreign articles of the like kind enter into competition with them at such place of sale; and to what extent? | 17. To a great extent.                                               |

## DOCUMENT 11.—No. 8.

*Calico Printing Manufactory, situate in the town of Rahway, in the County of Essex, in the State of New Jersey.*

| QUESTIONS.                                                                                                                                                                                                                                                                                              | ANSWERS.                                                                                                  |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                               | 1. In New Jersey, county of Essex.                                                                        |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                    | 2. Calico printing; water power.                                                                          |
| 3. When established, and whether a joint stock concern?                                                                                                                                                                                                                                                 | 3. Established 1827; private concern.                                                                     |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                         | 4. Fifty thousand dollars.                                                                                |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                                                                                                                                                                                        | 5. Five thousand five hundred dollars per week.                                                           |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed after providing for the interest upon it; and the rate of the profit upon that portion which is not borrowed? | 6. From 1828 to 1831 the gain was about 8 per cent.; and since, it has been from 20 to 25 per cent. loss. |

| QUESTIONS.                                                                                                                                                                                                                                                             | ANSWERS.                                                                                                                                                                                                                                                      |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7. Cause of the increase (or decrease, as the case may be) of profit?                                                                                                                                                                                                  | 7. Decrease on account of foreign goods coming in and sold at auction at a sacrifice, which compels us to sacrifice also.                                                                                                                                     |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                  | 9. One hundred thousand pieces per year, and averaging from three to four dollars per piece.                                                                                                                                                                  |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                      | 12. Wages paid about \$3,000 per month.                                                                                                                                                                                                                       |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                       | 13. Working hours 10 per day, and all the year if weather permitting.                                                                                                                                                                                         |
| 14. Rate of wages of similar classes otherwise employed, in the same State and county, in other States, and in foreign countries?                                                                                                                                      | 14. They vary but trifling, except in foreign countries, and they get but about half as much.                                                                                                                                                                 |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                        | 15. Four horses and yoke of oxen.                                                                                                                                                                                                                             |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to market?                                                                                                                                                                | 16. To New York, Boston, Philadelphia, and Baltimore.                                                                                                                                                                                                         |
| 17. Whether foreign articles of the like kind enter into competition with them at such place of sale, and to what extent?                                                                                                                                              | 17. They do enter into competition, and the reason I assign is, because they are all sold at auction, and the market is glutted very soon by them.                                                                                                            |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                               | 18. Principally in the United States.                                                                                                                                                                                                                         |
| 19. Whether any of the manufactures are exported to foreign countries, and, if so, where?                                                                                                                                                                              | 19. I believe to South America some are sent.                                                                                                                                                                                                                 |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                             | 20. They are chiefly sold through commission houses, and on eight months' credit.                                                                                                                                                                             |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market, with similar articles imported?                                                                                                                            | 23. I should consider 40 per cent.                                                                                                                                                                                                                            |
| 24. Is any change necessary in levying or collecting the duty on such articles, to prevent fraud?                                                                                                                                                                      | 24. It is highly necessary there should be a change, and, as far as possible, to prevent their entering goods at the custom-house for less than they cost. If the duty could be levied in cash instead of credit, it would benefit the American manufacturer. |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                       | 27. About \$1,500 is consumed monthly for agricultural, and \$500 for domestic productions.                                                                                                                                                                   |
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                                                                                                                   | 28. About 8,000 pieces per week in this State.                                                                                                                                                                                                                |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent, with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. We should be compelled to abandon our business immediately.                                                                                                                                                                                               |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                         | 30. Our capital is chiefly invested in the establishment, and, if we had to abandon it, we should consider it all lost; but if any remained, we would go to another country, where we consider the Government would protect us.                               |

## DOCUMENT 11.—No. 8.—Continued.

| QUESTIONS.                                                                                                                                                                             | ANSWERS.                                                                                                  |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------|
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent?                           | 31. We know of no other.                                                                                  |
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent.? <sup>†</sup> and how gradual the reduction should be? | 34. No reduction will do, as the profits vary; sometimes we make 15 per cent., again we lose 25 per cent. |
| 37. Proportion which the production, by the American manufacturers, bears to the consumption?                                                                                          | 37. We can manufacture sufficiently for the consumption of the United States if we are protected.         |

Very respectfully,

P. TRUSSLER.

## DOCUMENT 11.—No. 9.

*Statement of the Manufacture of Cotton, Hunterdon County, New Jersey.*

BLOOMSBURY, Warren County,

March 29, 1832.

Your circular of the 6th inst. came to hand a few days since, there having been an error in the direction of it. To some of the questions I annex replies; the rest I cannot reply to.

1. In Hunterdon county, New Jersey.
2. Cotton machinery, propelled by water power.
3. Established but a few months since, and a private concern.
4. Amount of capital \$15,000, or thereabouts.
5. Cotton costs about \$7,500 per annum, and wages \$3,500.
6. From the recent establishment of the concern am unable to state.
9. The article manufactured is principally cotton yarn.
10. About 75,000 lbs. cotton annually consumed.
12. Six men, averaging about \$7 per week; about 20 girls and boys (principally the former) whose wages average \$1 87½ per week.
13. About 70 hours per week.
16. Low numbers sell readily here, finer are sent to Philadelphia.
23. I do not think any further protection is required for any number of cotton yarn under 25; over that am unable to speak positively.
27. It would require about \$2,500 worth of agricultural productions per annum to keep all hands dependant upon this mill.
29. A reduction of the tariff to 12½ per centum would be total and positive ruin not only to myself, but to many of the hands connected with this concern.
34. No reduction should on any account be permitted, as it would be impossible to tell how soon, and what would be the next alteration.
37. The demand for yarns is a fair one, but both that and prices are rather on the decline, owing to the over-production.

Yours respectfully,

WM. H. MORRIS.

CHAS. KINSEY, Esq.

*Statement of the Manufacture of Cotton at Paterson, New Jersey.*

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>1. State and county in which the manufactory is situated?</p> <p>2. Kind or description of the manufactory, and whether water, steam, or other power?</p> <p>3. When established; and whether a joint stock concern?</p> <p>4. Capital invested in ground and buildings, and water power, and in machinery?</p> <p>12. Number of men, women, and children, employed, and average wages of each class?</p> <p>13. How many hours a day employed, and what portion of the year?</p> <p>15. Number of horses and other animals employed?</p> <p>16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?</p> <p>18. Where are the manufactures consumed?</p>                                                                                                                                                                                                                         | <p>1. Essex county, State of New Jersey.</p> <p>2. Cotton factory; water power.</p> <p>2. 1822; not a joint stock, but a private copartnership.</p> <p>4. One hundred and twenty-five thousand dollars.</p> <p>12. 209 men and boys at \$3 per week; 162 females at \$2 per week.</p> <p>13. Seventy hours per week.</p> <p>15. 2 horses.</p> <p>16. Sent to Philadelphia and New York.</p> <p>18. Principally in the United States, although considerable exports are made to Mexico and South America.</p>                                                                                              |
| <p>19. Whether any of the manufactures are exported to foreign countries; and if so, where?</p> <p>20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit; if bartered, for what?</p> <p>21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?</p> <p>23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?</p> <p>29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per centum, with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?</p> | <p>19. To Mexico and South America.</p> <p>20. Sold by the agents of the manufacturer at from 4 to 8 months' credit.</p> <p>21. It has steadily decreased, independently of the cost of material, in about the proportion of the prospect of permanency of the protection afforded.</p> <p>23. We think the present rates of duties, with the protection from frauds by means of the minimums, adequate; it is doubtful whether lower duties would be so.</p> <p>29. We should, very unwillingly, be under the necessity of abandoning our business.</p>                                                  |
| <p>30. If it would cause you to abandon your business, in what way would you employ your capital?</p> <p>31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per centum?</p> <p>34. What amount of reduction in the duties would enable the actual or real capital em-</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <p>30. Our capital being for the most part invested in machinery and buildings constructed purposely for our present business, we apprehend that we should have very little capital left to employ in case of the reduction of duties proposed above.</p> <p>31. There is hardly any pursuit which would not yield greater profits to those habitually engaged in them; how they would prove to persons whose course of thinking had long been turned intensely on a different pursuit we cannot tell.</p> <p>34. Any reduction which would subject us to the fluctuations in foreign markets, is ad-</p> |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>played to yield an interest of six per cent; and how gradual the reduction should be?</p> <p>35. If minimums should be abolished, and the duty assessed upon the actual value of the imported article in the American port, what rate of ad valorem duty would be equivalent to the present with the minimum?</p> <p>36. What would be the operation of this change upon the frauds at present supposed to be practised?</p> <p>37. Proportion which the production by the American manufacturers bears to the consumption?</p> | <p>dition to those incident to our own, would make our business a lottery in which we might gain occasionally; which, probably, would result in ruin, and would certainly throw the business entirely into the hands of large capitalists.</p> <p>35. No ad valorem duty would have the same effect as the system of minimum, which not only guards us in a great degree against frauds, but also, by fixing a constant value upon imported goods, removes, so far as the duty is concerned, the injurious effects of fluctuations in foreign markets.</p> <p>36: We think decidedly unfavorable, as it would open the door to fraudulent low valuations.</p> <p>37. We suppose at least nine-tenths of the descriptions of yarns and goods we make are manufactured in the United States.</p> |

We remain, sir,  
Your most obedient servants,  
COLLET & SMITH.

CHAS. KIRBY.

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>1. State and county in which the manufactory is situated?</p> <p>2. Kind or description of the manufactory; and whether water, steam, or other power?</p> <p>3. When established; and whether a joint stock concern?</p> <p>4. Capital invested in ground and buildings, and water power, and in machinery?</p> <p>5. Average amount in materials, and in cash for the purchase of materials, and payment of wages?</p> <p>6. Annual rate of profit on the capital invested since the establishment of the manufactory, distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of the profit upon that portion which is not borrowed?</p> <p>8. Rates of profit on capital otherwise employed in the same State and county?</p> <p>9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?</p> | <p>1. New Jersey, Paterson, Essex county.</p> <p>2. Cotton spinning and weaving; two mills.</p> <p>3. Established in 1813; owned by the undersigned.</p> <p>4. One hundred and forty-two thousand dollars.</p> <p>5. About eighty thousand dollars.</p> <p>6. Since the establishment, has not yielded 5 per cent. profit annually.</p> <p>8. Legal interest of the State, 6 per cent.</p> <p>9. About 345,000 lbs. yarn, a portion of which is converted into sheetings, which sell for from 5 to 8 cents per yard.</p> |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                                                                                    |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10. Quantity and value of different kinds of raw materials used, distinguishing between foreign products and domestic products?                                                                                                                                                                                                            | 10. About 420,000 lbs. cotton.                                                                                                                                                              |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                                                            | 11. At this time the price of yarn is lower than in Manchester, and made from cotton of American growth, while similar numbers of yarn in England is spun from East India cotton.           |
| 12. Number of men, women and children employed, and average wages of each class?                                                                                                                                                                                                                                                           | 12. Two hundred and two.                                                                                                                                                                    |
| 13. How many hours a day employed? and what portion of the year?                                                                                                                                                                                                                                                                           | 13. Eleven and a half hours per day.                                                                                                                                                        |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                                                            | 15. Four horses and two drivers.                                                                                                                                                            |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                                                                  | 16. New York and Philadelphia.                                                                                                                                                              |
| 17. Whether foreign articles of the like kind enter into competition with them at such place of sale? and to what extent?                                                                                                                                                                                                                  | 17. All cotton goods imported enter into competition, as the cotton manufacturers are embarking into the manufacture of finer fabrics.                                                      |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                                                                   | 18. United States of America, chiefly; and to some extent exported to countries in the East Indies, from whence America formerly obtained supplies, and made from cotton of foreign growth. |
| 19. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                                                                                                                                                                                                                  | 19. Yarn, and goods manufactured therefrom, exported to South America, Canton, and elsewhere.                                                                                               |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                                                                 | 20. Sold through the agency of commission merchants, on a credit of from 6 to 8 months.                                                                                                     |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                                                                | 21. Gradually lessened, owing to improvements in machinery.                                                                                                                                 |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                       | 22. A reduction of more than 50 per cent. since the first establishment.                                                                                                                    |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                                 | 23. The present duty.                                                                                                                                                                       |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. Not 10 per cent.                                                                                                                                                                        |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                                                                                               | 26. Cost of cotton about fifty thousand dollars.                                                                                                                                            |

| QUESTIONS.                                                                                                                                                                                                                                                              | ANSWERS.                                                                                             |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------|
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. An abandonment of the business.                                                                  |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                          | 30. Would have no capital in that event to employ, as the establishment would be useless to any one. |

PATERSON, 24th April, 1832.

D. HOLSMAN.

*Ridgeway & Dickey's Statement of Cotton Mill, Paterson, New Jersey.*

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                                                           |
|---------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Paterson, New Jersey.                                                                                                           |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                  | 2. One mill for spinning cotton yarn, moved by water power.                                                                        |
| 3. When established; and whether a joint stock concern?                                                                               | 3. Established in 1828, and is a private concern.                                                                                  |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                       | 4. Cost of water power, buildings and machinery, is forty-four thousand five hundred dollars.                                      |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                      | 5. For raw materials, wages paid to mill hands, and incidental expenses, about twenty-six thousand five hundred dollars per annum. |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 9. About 135,000 lbs. of cotton yarn, from Nos. 14 to 24, market price at present from 20 to 30 cents.                             |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?       | 10. About 160,000 lbs. of upland cottons.                                                                                          |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                       | 11. Very little or none imported.                                                                                                  |
| 12. Number of men, women and children employed, and average wages of each class?                                                      | 12. Eight men, average \$7 per week; 60 girls and boys, at average wages of \$3 each, per week.                                    |
| 13. How many hours a day employed? and what portion of the year?                                                                      | 13. Eleven and a half hours per day, averaging 50 weeks to the year.                                                               |
| 15. Number of horses or other animals employed?                                                                                       | 15. Two horses for transportation.                                                                                                 |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                             | 16. The yarn is sold in Philadelphia and New York to hand weavers.                                                                 |
| 17. Whether foreign articles of the like kind enter into competition with them at such place of sale; and to what extent?             | 17. They do not; little or none imported.                                                                                          |

## DOCUMENT 11.—No. 12—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                             | ANSWERS.                                                                                                                                                                                                                                                                                                     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                               | 18. The yarns are used in the United States, but considerable quantities were exported last year to South America.                                                                                                                                                                                           |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                               | 19. Some yarns were exported last year to Mexico.                                                                                                                                                                                                                                                            |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                             | 20. Yarns are selling on a credit of from 4 to 6 months.                                                                                                                                                                                                                                                     |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?            | 21. The cost has not materially varied in our establishment.                                                                                                                                                                                                                                                 |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                   | 22. Within three years, the price of yarn has lowered fifteen cents on a pound. No. 25 hanks to the pound have been sold for 40 and 25 cents per pound.                                                                                                                                                      |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                             | 23. Of course whatever rate of duty would affect prices of goods, will have a corresponding effect on prices of yarns.                                                                                                                                                                                       |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                       | 27. Partly answered by No. 10.                                                                                                                                                                                                                                                                               |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent, with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. If the duties were thus reduced, cotton yarn could not be spun in the United States, unless the wages of the hands were reduced to the same rate as at present in England, including the wages of all persons employed in making machinery, and in all the various branches connected with manufactures. |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                         | 30. If obliged to suspend operations, the whole capital would be a dead loss.                                                                                                                                                                                                                                |

PATERSON, 7th April, 1832.

RIDGWAY &amp; DICKEY.

## DOCUMENT 11.—No. 13.

*Statement of Cotton Manufactory in Paterson, Essex County, New Jersey.*

| QUESTIONS.                                                                           | ANSWERS.                                                                           |
|--------------------------------------------------------------------------------------|------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                            | 1. Paterson, Essex county, New Jersey.                                             |
| 2. Kind or description of the manufactory, and whether water, steam, or other power? | 2. Cotton spinning, and weaving. Water power.                                      |
| 3. When established, and whether a joint stock concern?                              | 3. 1816; and the present proprietor came into possession 1826. Individual concern. |
| 4. Capital invested in ground and buildings, and water power, and in machinery?      | 4. Thirty-five thousand dollars.                                                   |

## QUESTIONS,

## ANSWERS.

5. Average amount in materials, and in cash for the purchase of materials, and payment of wages?

9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?

10. Quantity and value of different kinds of raw materials used, distinguishing between foreign products and domestic products?

11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?

12. Number of men, women, and children employed, and average wages of each class?

13. How many hours a day employed, and what portion of the year?

14. Rate of wages of similar classes otherwise employed, in the same State and county, in other States, and in foreign countries?

15. Number of horses or other animals employed?

16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?

18. Where are the manufactures consumed?

19. Whether any of the manufactures are exported to foreign countries? and if so, where?

20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?

21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased, and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?

22. The prices at which the manufactures have been sold by the manufacturers since the establishment?

23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?

25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and, therefore, not divided out annually?

5. Twenty-one thousand dollars.

9. 100,000 lbs. cotton yarn, Nos. 14 to 22. Average price of No. 14 has been 21 cts.; Do. No. 22, 25 cts.

10. About 120,000 lbs. fine Louisiana and, Alabama cotton per year, costing \$13,400, or thereabout.

11. Do not know.

12. Average wages, men \$8 per week; Do. of boys and females, \$2 per week. Employ 4 men, 14 boys, 19 girls.—N. B. 6 of those girls earn \$3 per week.

13. About 11½ hours per day for fifty weeks, is the most time that can be made in the year.

14. Do not know.

15. 2 horses constantly employed in teaming for the factory, with 1 man at 75 cents per day for driver.

16. Philadelphia and New York.

18. Principally in the United States; some to South America.

19. Very little at present; what is so, to South America.

20. On a credit of four months.

21. Has gradually lessened in consequence of improvements and perfection of machinery and knowledge gained, and more rigid economy practised.

22. During the preceding three years have received six cents per pound less for yarn than for the period of time before.

23. Such a rate of duty on yarn as would secure to us the difference between the cost of machinery and wages in spinning in England, and that of the United States, which is now from 40 to 47½ per cent.

25. The profit of the last year is not equivalent to the loss of the two preceding ones. Individual concern.

| QUESTIONS.                                                                                                                                                                                                                                                              | ANSWERS.                                                                                                                                                                                                      |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                            | 26. Partly answered by 5th and 10th.                                                                                                                                                                          |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                        | 27. Partly answered by No. 10.                                                                                                                                                                                |
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                                                                                                                    | 28. Do not know.                                                                                                                                                                                              |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make, were reduced to 12½ per cent, with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. If thus so reduced, such quantities of foreign yarn would be thrown into the market, that I should be compelled to abandon the business.                                                                  |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                          | 30. If thus compelled to abandon my business, I should not have any capital left for to embark in any other, as my all is invested in water power, buildings, and machinery, for the spinning of cotton only. |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                                                                           | 31. Should not have any thing but my naked hands to make the experiment with.                                                                                                                                 |
| 33. Amount of capital, and what proportion the borrowed capital bears to that which is real?                                                                                                                                                                            | 33. Partly answered by Nos. 4 and 5.                                                                                                                                                                          |

WARREN HAIGHT,  
Agent for the Proprietors of Harmony Factory.

## DOCUMENT 11.—No. 14.

*Statement of Cotton Manufactory in Paterson, Essex County, New Jersey.*

| QUESTIONS.                                                                                                                            | ANSWERS.                         |
|---------------------------------------------------------------------------------------------------------------------------------------|----------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. New Jersey, Essex county.     |
| 2. Kind or description of the manufactory, and whether water, steam, or other power?                                                  | 2. Cotton; water power.          |
| 3. When established, and whether a joint stock concern?                                                                               | 3. In 1831. No joint stock.      |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                       | 4. Thirty-one thousand dollars.  |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 9. In operation six months only. |

## DOCUMENT 11.—No. 14—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                               | ANSWERS.                                                                         |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------|
| 10. Quantity and value of different kinds of raw materials used, distinguishing between foreign products and domestic products?                                                                                                                                          | 10. 100,000 lbs. cotton, at 11 to 12 cents per pound.                            |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                        | 12. 3 men, 6 women, 28 children. \$300 per month.                                |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                         | 13. Average 11½ hours per day through the year.                                  |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                          | 15. Two horses.                                                                  |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                | 16. New York and Philadelphia.                                                   |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                 | 18. United States and South America.                                             |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                                 | 19. South America.                                                               |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                               | 20. Six months' credit.                                                          |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased, and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?               | 21. Only in operation six months.                                                |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                     | 22. Yarns from No. 18 to 30, are now selling at 5 cents over the number, per lb. |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make, were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. Abandon the business.                                                        |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                           | 30. We understand no other business.                                             |

| QUESTIONS.                                                                                                                                                                                                                                                  | ANSWERS.                                                                                                                                                |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                             | 4. About \$8,000; and, in addition, building a mill and machine shop, worth about 14,000 dollars, which will require additional capital to carry it on. |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                             | 5. Thirty thousand dollars.                                                                                                                             |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                           | 12. Forty men, wages average \$1.50 a day.                                                                                                              |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                            | 13. Eleven hours throughout the year.                                                                                                                   |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                   | 16. Erected machinery for mills as far north as Connecticut, and south as far as Georgia.                                                               |
| 19. Whether any of the manufactures are exported to foreign countries; and, if so, where?                                                                                                                                                                   | 19. To Mexico.                                                                                                                                          |
| 20. Whether the manufacture is sold by the manufacturer for cash? and, if on credit, at what credit; if bartered, for what?                                                                                                                                 | 20. Credit.                                                                                                                                             |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 21. Increased both in value of labor and materials, since commencement, about 50 per cent.                                                              |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                | 26. Labor two-thirds.                                                                                                                                   |

| QUESTIONS.                                                                                                                                                                                                                                                                                               | ANSWERS.                                                                                                      |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                                | 1. New Jersey, county of Essex.                                                                               |
| 2. Kind or description of the manufactory, and whether water, steam, or other power?                                                                                                                                                                                                                     | 2. Machinery. Water power.                                                                                    |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                                  | 3. January, 1832. Not a joint stock concern.                                                                  |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                          | 4. About \$50,000, including machinery and tools now in use.                                                  |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                                                                                                                                                                                         | 5. About \$10,000.                                                                                            |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory, distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of the profit upon that portion which is not borrowed? | 6. The establishment is in its infancy, and therefore do not know annual rate of profit. No borrowed capital. |

| QUESTIONS.                                                                                                                                                                                                                                                               | ANSWERS.                                                                                                     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------|
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                                  | 7. Excessive importations and auction system.                                                                |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                           | 8. Do not know.                                                                                              |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality and value of each kind?                                                                                                                                     | 9. Do not know; the establishment being in its infancy.                                                      |
| 10. Quantity and value of different kinds of raw materials used, distinguishing between foreign products and domestic products?                                                                                                                                          | 10. Do not know; the establishment being in its infancy.                                                     |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                          | 11. Do not know.                                                                                             |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                        | 12. 120 men and boys; say 103 men at \$6 per week, and 17 boys at \$2 48 per week.                           |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                                         | 13. Eleven hours the whole year.                                                                             |
| 14. Rate of wages of similar classes otherwise employed, in the same State and county, in other States, and in foreign countries?                                                                                                                                        | 14. Do not know.                                                                                             |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                          | 15. Four horses.                                                                                             |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                | 16. At home, and various sections of the United States.                                                      |
| 17. Whether foreign articles of the like kind enter into competition with them at such place of sale, and to what extent?                                                                                                                                                | 17. They do not, at the present time.                                                                        |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                 | 18. In the United States.                                                                                    |
| 19. Whether any of the manufactures are exported to foreign countries; and, if so, where?                                                                                                                                                                                | 19. Cotton machinery is exported to Mexico.                                                                  |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, for what credit? if bartered, for what?                                                                                                                                              | 20. Credit from four to twelve months, generally.                                                            |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?              | 21. Labor has increased in value, and the cost of the manufactured article in, perhaps, the same proportion. |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition, in the home market, with similar articles imported?                                                                                                                             | 23. Present tariff.                                                                                          |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make, were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. Would cause us to abandon our business.                                                                  |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                           | 30. Capital would be sunk in buildings and water privileges of no value.                                     |

| QUESTIONS.                                                                                                                                                                                                                                             | ANSWERS.                                                                                                                                               |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                              | 1. State of New Jersey, county of Essex.                                                                                                               |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                   | 2. Frame building. Water power.                                                                                                                        |
| 3. When established, and whether a joint stock concern?                                                                                                                                                                                                | 3. In 1830. Owned by two individuals.                                                                                                                  |
| 4. Capital invested in ground and buildings, water power and in machinery?                                                                                                                                                                             | 4. In ground and buildings, with power, \$ 20,000; in machinery and machine-makers' tools \$ 18,000.                                                   |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                                                                                                                                       | 5. In materials, &c. \$ 12,000.                                                                                                                        |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                  | 9. There has been 156,000 pounds yarn produced, averaging number 15, \$ 34,320; and new machinery to the amount of \$ 40,000 per annum.                |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                      | 12. Sixty men at machine-making, and 36 women and children. The men average 11 shillings per diem, women three dollars per week, children two dollars. |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                       | 13. The men average 11 hours throughout the year; other hands 12 hours.                                                                                |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                        | 15. Two horses.                                                                                                                                        |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                              | 16. New York and Philadelphia are the marts for yarn. Machinery made to order, and forwarded to all parts of the United States and South America.      |
| 19. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                                                                                                                              | 19. Machinery to South America, also yarns.                                                                                                            |
| 20. Whether the manufacture is sold by the manufacturer for cash? If on credit, at what credit? If bartered, for what?                                                                                                                                 | 20. The credit is intended to average four months.                                                                                                     |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 21. Labor has advanced 15 per cent.                                                                                                                    |

| QUESTIONS.                                                                                                                                                                                                                                                  | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                           |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                     | 3. 1821; and is a private concern.                                                                                                                                                                                                                                                                                                                                                 |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                             | 4. \$150,000.                                                                                                                                                                                                                                                                                                                                                                      |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                                                                                                                                            | 5. \$180,911.                                                                                                                                                                                                                                                                                                                                                                      |
| 9. Amount of articles annually manufactured since the establishment of the manufactory; description, quality, and value of each kind?                                                                                                                       | 9. About 200,000 lbs. cotton yarn, averaging number 18, worth 23 cents per pound; 20,000 spindles with preparation, at \$10 per spindle, inclusive of iron and brass castings, valued at \$10,000.                                                                                                                                                                                 |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                             | 10. 225,000 pounds upland cotton; about 600 tons of pig iron, 400 tons of Lehigh and Lackawanna coal; 120 tons bar iron; 15 tons steel; 50 chaldrons Virginia coal; 20,000 lbs. copper; 2,500 zinc; 2,500 blocktin; 1,500 pounds lead; about $\frac{1}{2}$ of the pig iron imported; steel, copper, blocktin, and zinc also imported, and $\frac{1}{2}$ of the bar iron; \$83,161. |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                             | 11. No importation.                                                                                                                                                                                                                                                                                                                                                                |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                           | 12. 220 men, averaging \$8 per week; 45 girls and 23 boys, averaging \$2 50 per week.                                                                                                                                                                                                                                                                                              |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                            | 13. 11 $\frac{1}{2}$ hours to the day, averaging 50 weeks to the year.                                                                                                                                                                                                                                                                                                             |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                             | 15. Eight horses for teaming.                                                                                                                                                                                                                                                                                                                                                      |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                   | 16. The yarn is sent to Philadelphia and New York, and there sold to weavers. The machinery sold principally in the United States, but recently some has been shipped to Mexico.                                                                                                                                                                                                   |
| 17. Whether foreign articles of the like kind enter into competition with them at such place of sale, and to what extent?                                                                                                                                   | 17. We believe not.                                                                                                                                                                                                                                                                                                                                                                |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                    | 18. Answered in No. 16.                                                                                                                                                                                                                                                                                                                                                            |
| 19. Whether any of the manufactures are exported to foreign countries; and, if so, where?                                                                                                                                                                   | 19. Answered in No. 16.                                                                                                                                                                                                                                                                                                                                                            |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                  | 20. Sold at a credit of from six to nine months.                                                                                                                                                                                                                                                                                                                                   |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 21. No material difference.                                                                                                                                                                                                                                                                                                                                                        |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                        | 22. Yarn has fallen 15 cents per pound within three years, and machinery \$1 50 per spindle within the same time.                                                                                                                                                                                                                                                                  |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                            | 24. Cash duties, and the appointment of custom-house officers, particularly appraisers, who are friendly to the protection of domestic manufactures.                                                                                                                                                                                                                               |

| QUESTIONS.                                                                                                                                                                                                                                                              | ANSWERS.                                                                                                                                                                 |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                        | 27. Answered in No. 10.                                                                                                                                                  |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. Such reduction would cause spinning to cease, without a corresponding reduction in the wages of the operatives connected with the various branches of manufacturing. |

PATERSON, April 26, 1832.

GODWIN, CLARK & Co.  
Per J. M. CRISKOND.

## DOCUMENT 11.—No. 19.

*Statement of Cotton Manufactory in Paterson, Essex County, New Jersey.*

| QUESTIONS.                                                                                                                                                                                                                                                              | ANSWERS.                                                                                    |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                               | 1. Town of Paterson, county of Essex, and State of New Jersey.                              |
| 2. Kind or description of the manufactory; and whether water, steam or other power?                                                                                                                                                                                     | 2. Cotton manufactory; water power.                                                         |
| 3. When established, and whether a joint stock concern?                                                                                                                                                                                                                 | 3. 1827; private company.                                                                   |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                         | 4. \$40,000.                                                                                |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                                                                                                                                                        | 5. \$33,000 per annum for materials, and wages to hands.                                    |
| 12. Number of men, women and children employed, and average wages of each class?                                                                                                                                                                                        | 12. 65 men, women, and children.                                                            |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                         | 15. Two horses.                                                                             |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                               | 16. The manufactured goods are sent about 100 miles to a market.                            |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                              | 23. The present duties.                                                                     |
| 24. Is any change necessary in levying or collecting the duty on such articles, to prevent fraud?                                                                                                                                                                       | 24. Vigilance to prevent smuggling, and short credit on duties.                             |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. Necessity would compel us to relinquish the business, and in every probability ruin us. |

DOCUMENT 11.—No. 19.—Continued.

| QUESTIONS.                                                                                                                                                    | ANSWERS.                                                                                                                                      |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                | 30. Being ruined, we should have no capital to employ.                                                                                        |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.? | 31. Growing cotton we should consider the most lucrative business, unless the price of that article is very much lower than it is at present. |

CLARK AND ROBINSON.

| QUESTIONS.                                                                                                                                                                                                                                                  | ANSWERS.                                                                                           |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                   | 1. County of Essex, State of New Jersey.                                                           |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                        | 2. Cotton spinning; water power.                                                                   |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                     | 3. In 1825; individual concern.                                                                    |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                             | 4. \$36,000.                                                                                       |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                                                                                                                                            | 5. Wages, \$500 per month.                                                                         |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                     | 7. Cause of decrease, excessive imports.                                                           |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                       | 9. Cotton yarn, value Nos. 20's to 30's, 5 cents above the number.                                 |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                             | 10. Cotton, 125,000 lbs.                                                                           |
| 12. Number of men, women and children employed, and average wages of each class?                                                                                                                                                                            | 12. Two men, \$10 per week each; 6 women, \$3 75 per week each; 43 children, \$2 25 per week each. |
| 13. How many hours a day employed? and what portion of the year?                                                                                                                                                                                            | 13. 11½ hours through the year.                                                                    |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                   | 16. Philadelphia.                                                                                  |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                    | 18. United States.                                                                                 |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                  | 20. Four to six months' credit.                                                                    |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 21. Increased within four years about two cents per pound on cotton yarn, by the advance in labor. |

| QUESTIONS.                                                                                                                                   | ANSWERS.                                                      |
|----------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------|
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                         | 22. Average about five cents above the No. from 20's upwards. |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition, in the home market, with similar articles imported? | 23. Nothing less than the present duty.                       |

CALEB M. GODWIN.

## DOCUMENT 11.—No. 21.

*Cotton Manufactory in Paterson, Essex County, New Jersey.*

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                                                                                         |
|---------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Paterson, Essex county, New Jersey.                                                                                                                           |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                  | 2. Two mills and one weaving shop, for spinning and weaving cotton, moved by water power.                                                                        |
| 3. When established; and whether a joint stock concern?                                                                               | 3. First established in 1815 and 1818, by individuals, but created a joint stock concern in 1828.                                                                |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                       | 4. Total capital is \$118,700.                                                                                                                                   |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                      | 5. About \$100,000 per annum for cost of raw materials, and wages paid to factory hands.                                                                         |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 9. About 465,000 yards of cotton canvass (sail cloth) are now made, of different qualities, from No. 1 to 10, which sells from 25 to 37 cents per yard.          |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?       | 10. About 501,000 pounds Louisiana and Alabama cotton of best quality, costing about \$56,000.                                                                   |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                       | 11. None imported.                                                                                                                                               |
| 12. Number of men, women, and children employed, and average wages of each class?                                                     | 12. Average wages of men per week \$8 25, of boys and females \$2 12 per week; employ 9 men, 36 boys, and 151 girls. N. B. 75 of the girls make \$2 78 per week. |
| 13. How many hours a day employed, and what portion of the year?                                                                      | 13. About 11½ hours for 50 weeks in the year, as there are many stoppages.                                                                                       |
| 15. Number of horses or other animals employed?                                                                                       | 15. 4 horses constantly employed in transporting to and from the factory, with two men, at 87½ cents per day, as drivers.                                        |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                             | 16. Sent to most of the sea-port towns in the United States; also to the lakes.                                                                                  |
| 17. Whether foreign articles of the like kind enter into competition with them at such place of sale; and to what extent?             | 17. English and Russia canvass compete with the cotton duck; they are not sold at lower prices, but necessarily come in competition.                             |

## DOCUMENT 10.—No. 21—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                           |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                                                                   | 18. Principally consumed in the United States, but if the home market could be secured to the American manufacturer, would soon become an article of large export.                                                                                                                                                                                                                 |
| 19. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                                                                                                                                                                                                                  | 19. Very little if any is exported at present.                                                                                                                                                                                                                                                                                                                                     |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                                                                 | 20. On a credit of 6 to 8 months; if for cash, a discount of 5 per cent. is allowed.                                                                                                                                                                                                                                                                                               |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                                                                | 21. Has gradually lessened, in consequence of improvements and perfection of machinery, knowledge gained, and more rigid economy practised.                                                                                                                                                                                                                                        |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                       | 22. I formerly obtained 4 cents per yard more for my canvass than I now ask for it.                                                                                                                                                                                                                                                                                                |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market, with similar articles imported?                                                                                                                                                                                                | 23. If the present rate of duty on foreign duck is maintained, the manufacture of cotton duck will not only be continued, but would probably be much extended, and the article become one of export: as cotton duck is as valuable for use as the foreign, it will, before long, get into general use, and supersede the imported duck.                                            |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 35. Being owned by three persons, or stockholders, no dividends have been declared: the profits are allowed to remain as an accumulating capital.                                                                                                                                                                                                                                  |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                           | 27. Partly answered by No. 10.                                                                                                                                                                                                                                                                                                                                                     |
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                                                                                                                                                                                       | 28. My establishment is the only one at present in New Jersey, and produces probably about one half of all that is at present made in the United States.                                                                                                                                                                                                                           |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                                                                    | 29. If thus reduced, such quantities of foreign duck would be thrown into market as would reduce the price below the real cost of the article, it is believed, in the country from whence it was imported; and would so interfere with the manufacture of cotton duck that I should be obliged to suspend the manufacture of the article, if not eventually to stop it altogether. |
| 30. If it caused you to abandon your business, in what way would you employ your capital?                                                                                                                                                                                                                                                  | 30. If obliged to abandon the manufacture of cotton duck, a large amount of capital invested in machinery and fixtures would be a dead loss; it would not be used for other purposes; and the same reduction would so effect the other branches of the cotton busi-                                                                                                                |

| QUESTIONS.                                                                                                                                                                                                                                                               | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?</p> <p>33. Amount of capital, and what proportion the borrowed capital bears to that which is real?</p> | <p>ness that I do not believe I could run a spindle to advantage. In this case, my capital invested in mills, water power, and machinery, might be set down as an actual loss. If the buildings, gearing, and machinery, did not cost us any more than in England, and if the wages paid to the hands employed in the mills, and all other wages incident to the manufacture of cotton generally, was reduced in this country to the same rate as paid in England, I could compete with the English manufacturer without duties.</p> <p>31. Partly answered above. I know of no manufacturing business in which I could engage with profit.</p> <p>33. Partly answered by 4th and 5th queries?</p> |

PATERSON, April 6, 1832.

SIR: I have answered such of the queries as I could; some I did not feel at liberty to answer, and to others it is difficult to answer briefly. I have not mentioned my rolling mill and nail factory, which, with the water rights, &c. cost me about \$30,000, but which I have not worked for the last year, owing to the *low price of nails*, caused by *home competition*. This factory has heretofore turned out 300 tons of nails per annum.

I will also take leave to remark, that, when the returns of mills, &c. was made from this State to the Committee of the New York Tariff Convention, I believe many persons did not return the full value of their establishments and water rights. It was so in mine: hence there may possibly arise some discrepancy between your reports of the value of the cotton establishments of this State and the report above mentioned. You will understand that I have not included the amount of the rolling mill and nail factory in my answer to No. 4.

Very respectfully, yours, &amp;c.

JNO. COLT.

CHARLES KINSLEY, Esq.

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                                                                                                                                |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                                                                                                                                                                                                                           | 5. Wages annually \$26,000, materials and cash paid for materials \$52,000 annually.                                                                                                                                                    |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of the profit upon that portion which is not borrowed?                                   | 6. \$20,000 borrowed at 6 per cent. per annum; on that portion not borrowed 3 per cent. per annum.                                                                                                                                      |
| 7. Cause of the increase (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                                                                     | 7. Fluctuations in the public mind from want of confidence in unanimity of the Government to protect our infant manufactures, scarcity of money, and excess of competition.                                                             |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                                                             | 8. Variable from 3 to 10 per cent.                                                                                                                                                                                                      |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                                                      | 9. Yarn 100,000 lbs., price fr. 17 to 60 cts.; cotton 115,000 lbs., from 32 to 10; cloth 500,000 yards, average 10 cents; so the great profit was enjoyed only a few years on spinning, at its commencement, and for the last 8 months. |
| 12. Number of men, women and children employed, and average wages of each class?                                                                                                                                                                                                                                                           | 12. 32 men, average \$6 weekly, 80 girls, at \$3, 68 children, average \$1.                                                                                                                                                             |
| 13. How many hours a day employed? and what portion of the year?                                                                                                                                                                                                                                                                           | 13. 12 hours in summer and 10 hours in winter; one quarter of the year for children to school, either in fall or spring.                                                                                                                |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                                                            | 15. One horse.                                                                                                                                                                                                                          |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                                                                  | 16. Sold in Philadelphia, 30 miles distant.                                                                                                                                                                                             |
| 17. Whether foreign articles of the like kind enter into competition with them at such place of sale; and to what extent?                                                                                                                                                                                                                  | 17. To a large extent, at auction.                                                                                                                                                                                                      |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                                                                   | 18. United States principally.                                                                                                                                                                                                          |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                                                                 | 20. Sold by commission at 6 to 8 months' credit, 5 to 7½ per cent. for commission and guarantee.                                                                                                                                        |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                                                                | 21. The fluctuations have been against the manufacturer in materials, (see 9th query;) price of labor variable from 5 to 10 per cent.                                                                                                   |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                       | 22. Yarn from 60 to 17 cents, cloth from 20 to 12½, and 7½ to 5½ printing cloths; in 1815 plaids sold at 28, and in 1832 sold at 9 to 11 cents.                                                                                         |
| 23. What rate of duty necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                                    | 23. Present tariff duty.                                                                                                                                                                                                                |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. See 6th query.                                                                                                                                                                                                                      |

| QUESTIONS.                                                                                                                                                                                                                                                                     | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                         |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?</p>                                                                                            | <p>26. See 5th, 6th, and 12th queries.</p>                                                                                                                                                                                                                                                                                                                                       |
| <p>27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?</p>                                                                                                                        | <p>27. 6,000 lbs. flour, leather for belts, &amp;c., 800 lbs., coal 80 tons, wood 300 cords, shuttles 150, pickers 500, reeds 200, heddles 150 sets, 115,000 pounds cotton, besides iron and wood work, with sheep skins, glue, list, oil 800 galls, and indigo 2,000 lbs., and coppers and lime, and dye stuffs of most all descriptions; mostly all domestic manufactures.</p> |
| <p>29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?</p> | <p>29. Most certainly abandon it, as a gambler swindled out of his last dollar.</p>                                                                                                                                                                                                                                                                                              |
| <p>30. If it would cause you to abandon your business, in what way would you employ your capital?</p>                                                                                                                                                                          | <p>30. In no other way, having none left. If I, who have been long in the business, would have to abandon it, who would purchase my property? It would be the most unproductive stock in the United States; I could not sell it.</p>                                                                                                                                             |
| <p>33. Amount of capital, and what proportion the borrowed capital bears to that which is real?</p>                                                                                                                                                                            | <p>33. One-fifth; in all \$101,000.</p>                                                                                                                                                                                                                                                                                                                                          |
| <p>34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent.? and how gradual the reduction should be?</p>                                                                                               | <p>34. Present rate of tariff duties, which has for its object the encouragement of our manufactures, should continue six or eight years; all others should be abandoned. The most of the manufacturer's capital is perishable, such as machinery, &amp;c.; he would require 12 per ct. as equal remuneration.</p>                                                               |
| <p>36. What would be the operation of this change upon the frauds at present supposed to be practised?</p>                                                                                                                                                                     | <p>36. Frauds are more supposed than real, but I am certain that the operation of any reduction would be ruinous to the manufacturer.</p>                                                                                                                                                                                                                                        |

## DOCUMENT 11.—No. 24.

*Statement of the Manufacture of Woollen, Rahway, New Jersey.*

| QUESTIONS.                                                                                                                                                                                                                                                                                               | ANSWERS.                              |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                                | 1. Essex county, State of New Jersey. |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                     | 2. Water power.                       |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                                  | 3. 1828. Individual.                  |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                          | 4. \$25,000—cost \$100,000.           |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                                                                                                                                                                                         | 5. \$60,000.                          |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory, distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of the profit upon that portion which is not borrowed? | 6. Not a fair question.               |
| 7. Cause of decrease, as the case may be, of profit?                                                                                                                                                                                                                                                     | 7. Wool high.                         |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                           | 8. 20 per cent. per annum.            |
| 9. Amount of articles annually manufactured since the establishment of the manufactory; description, quality, and value of each kind?                                                                                                                                                                    | 9. Not fair.                          |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                          | 11. None.                             |
| 12. Number of men, women, and children, employed, and average wages of each class?                                                                                                                                                                                                                       | 12. 90 men, women, and children.      |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                         | 13. 12 hours each.                    |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                          | 15. 2 horses.                         |
| 16. Whether the manufactures find a market at the manufactory; if not, how far they are sent to a market?                                                                                                                                                                                                | 16. Sent to market.                   |
| 17. Whether foreign articles of the like kind enter into competition with them at such place of sale, and to what extent?                                                                                                                                                                                | 17. No.                               |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                                 | 18. Mostly among negroes.             |
| 19. Whether any of the manufactures are exported to foreign countries; and if so, where?                                                                                                                                                                                                                 | 19. None.                             |
| 20. Whether the manufacture is sold by the manufacturer for cash; and if on credit, at what credit; if bartered, for what?                                                                                                                                                                               | 20. Sold on eight months' credit.     |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                               | 23. No duty on wool.                  |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                                                                         | 24. No.                               |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                               | ANSWERS.                     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| 25. What has been the rate of your profits annually for the last three years; and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. Not fair.                |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                         | 27. \$15,000.                |
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                                                                                                                                                                                     | 28. Dont know.               |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make, were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                                                                 | 29. Reduce the duty on wool. |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                                                                                           | 30. Agriculture.             |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                                                                                                                                            | 31. Untried.                 |
| 33. Amount of capital; and what portion the borrowed capital bears to that which is real?                                                                                                                                                                                                                                                | 33. No borrowed.             |
| 36. What would be the operation of this change upon the frauds at present supposed to be practised?                                                                                                                                                                                                                                      | 36. Take duty from wool.     |

WM. N. BOWNE.

## DOCUMENT 11.—No. 25.

*Statement of the Manufacture of Carpeting in Bergen County, New Jersey.*

|                                                                                                 |                                         |
|-------------------------------------------------------------------------------------------------|-----------------------------------------|
| 1. State and county in which the manufactory is situated?                                       | 1. Bergen county, New Jersey.           |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?            | 2. Woollen carpet factory—manual labor. |
| 3. When established; and whether a joint stock concern?                                         | 3. 1831; individual concern             |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                 | 4. \$3,000.                             |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages? | 5. \$15,000.                            |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>6. Annual rate of profit on the capital invested since the establishment of the manufactory, distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of the profit upon that portion which is not borrowed?</p> <p>9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?</p> <p>10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?</p> <p>11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?</p> <p>12. Number of men, women, and children, employed, and average wages of each class?</p> <p>13. How many hours a day employed?</p> <p>14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?</p> <p>15. Number of horses or other animals employed?</p> <p>16. Whether the manufactures find a market at the manufactory; if not, how far they are sent to a market?</p> <p>17. Whether foreign articles of the like kind enter into competition with them at such place of sale, and to what extent?</p> <p>18. Where are the manufactures consumed?</p> <p>19. Whether any of the manufactures are exported to foreign countries; and if so, where?</p> <p>20. Whether the manufacture is sold by the manufacturer for cash; and if on credit, at what credit; if bartered, for what?</p> <p>22. The prices at which the manufactures have been sold by the manufacturer since the establishment?</p> <p>23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?</p> <p>29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?</p> <p>30. If it would cause you to abandon your business, in what way would you employ your capital?</p> <p>31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?</p> | <p>6. Time must try; cannot tell at present, the establishment being in its infancy.</p> <p>9. Say at the rate of 15,000 yards per annum of ingrained carpeting, valued at \$1 18 per yard, \$16,700.</p> <p>10. 17,160 lbs. at 30 cents, of woollen yarn, and 6,760 lbs. at 70 cents of worsted; all imported from Scotland; valued at \$12,064.</p> <p>11. At about the same price.</p> <p>12. 6 men at \$6 per week; 1 woman and 1 boy at \$2 per week each.</p> <p>13. 10 hours.</p> <p>14. None in same county or State, within my knowledge; in Scotland wages are 50 per cent. less than here.</p> <p>15. None.</p> <p>16. New York, 15 miles.</p> <p>17. They do very materially, and to a large extent.</p> <p>18. In the United States.</p> <p>19. No where.</p> <p>20. 6 months' credit.</p> <p>22. See question 9.</p> <p>23. Present rate of duty.</p> <p>29. Abandon the business.</p> <p>30. Should have none to employ.</p> <p>31. Do not know.</p> |

| QUESTIONS.                                                                                                                                                                                                                                                                                               | ANSWERS.                                                                                                                                               |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                                | 1. Essex county, in the State of New Jersey.                                                                                                           |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                     | 2. Satinet factory, water power.                                                                                                                       |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                                  | 3. Established in Bergen county in 1826, moved to Essex county in Oct'r, 1831, owned by John Barrow & Sons.                                            |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                          | 4. Ground and water power \$12,000, and buildings \$12,000.                                                                                            |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                                                                                                                                                                                         | 5. Machinery \$15,000, and floating capital \$10,000.                                                                                                  |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory, distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of the profit upon that portion which is not borrowed? | 6. The business has been a bare one, and could not be sustained without the strictest economy.                                                         |
| 7. Cause of the increase (or decrease, as the case may be) of profit?                                                                                                                                                                                                                                    | 7. Owing to the greater or less quantity of coarse woollen goods imported.                                                                             |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                           | 8. Mercantile about 15, and agricultural about 5 per cent. per annum.                                                                                  |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                    | 9. One hundred and fifty thousand yards annually, worth from 45 to 75 cents per yard.                                                                  |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                          | 10. Sixty five thousand pounds American, and twenty-five thousand foreign; the former worth 55 cents, the latter about the same; according to quality. |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                          | 11. Have not heard of any satinets being imported.                                                                                                     |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                        | 12. Forty-two men at \$5 per week, twenty-six women at \$3 50 per week, and twenty children at \$1 25 per week.                                        |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                         | 13. Twelve hours the year round.                                                                                                                       |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                                                 |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                                                           | 14. About the same, with a few exceptions, throughout the county. Know nothing about foreign countries.                                                  |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                                                            | 15. Three horses.                                                                                                                                        |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                                                                  | 16. To New York and Philadelphia.                                                                                                                        |
| 17. Whether foreign articles of the like kind enter into competition with them at such place of sale, and to what extent?                                                                                                                                                                                                                  | 17. Coarse woollens and fustians come in competition with them at both places. (See 7th query.)                                                          |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                                                                   | 18. In all parts of the United States.                                                                                                                   |
| 19. Whether any of the manufactures have been exported to foreign countries? and if so, where?                                                                                                                                                                                                                                             | 19. A few have been tried in South American markets.                                                                                                     |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                                                                 | 20. Sold at six months' credit.                                                                                                                          |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                                                                | 21. Wool advanced rapidly from 1829 to 1831, but is now falling off.                                                                                     |
| 22. The prices at which the manufactures have been sold by the manufacturer, since the establishment?                                                                                                                                                                                                                                      | 22. In 1826, 55 cents; 1827, 40 cents; 1828, 45 cents; 1829, 47 cents; 1830, 52 cents; 1831, 55 cents; 1832, to the last sales, 50 cents.                |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition, in the home market, with similar articles imported?                                                                                                                                                                                               | 23. Leave the duties as they are, and detect frauds, and with industry and economy we can exist.                                                         |
| 24. Is any change necessary in levying or collecting the duty on such articles, to prevent fraud?                                                                                                                                                                                                                                          | 24. We think there is.                                                                                                                                   |
| 25. What has been the rate of your profits, annually, for the last three years? And if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. Answered in the 6th query.                                                                                                                           |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                                                                                               | 26. About two-thirds raw material, and one-third labor and profits.                                                                                      |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                           | 27. About 900 individuals are clothed and fed by the establishment, and three-fourths of raw materials, including cotton warps, are domestic production. |
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                                                                                                                                                                                       | 28. Do not know the extent.                                                                                                                              |

| QUESTIONS.                                                                                                                                                                                                                                                                     | ANSWERS.                                                                                                                                                  |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 18½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?</p> | <p>29. Should be compelled to abandon it.</p>                                                                                                             |
| <p>30. If it would cause you to abandon your business, in what way would you employ your capital?</p>                                                                                                                                                                          | <p>30. If we should have any left, should think it most prudent to go to Europe, and commence manufacturing where the industrious are protected.</p>      |
| <p>31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?</p>                                                                                                           | <p>31. We are strangers to other businesses, but should a reduction of 12½ cents take place, it would be madness for any manufacturer to continue it.</p> |
| <p>32. Are not the manufactures of salt and iron, remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?</p>                                                                            | <p>32. Know nothing of the nature of their business or location.</p>                                                                                      |
| <p>33. Amount of capital, and what proportion the borrowed capital bears to that which is real?</p>                                                                                                                                                                            | <p>33. Answered in the 4th and 5th queries.</p>                                                                                                           |
| <p>34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of six per cent., and how gradual the reduction should be?</p>                                                                                             | <p>34. The smallest reduction would be ruinous to the woollen manufacturer.</p>                                                                           |
| <p>35. If minimums should be abolished, and the duty assessed upon the actual value of the imported article in the American port, what rate of ad valorem duty would be equivalent to the present with the minimum?</p>                                                        | <p>35. Dont know.</p>                                                                                                                                     |
| <p>36. What would be the operation of this change upon the frauds at present supposed to be practised?</p>                                                                                                                                                                     | <p>36. Dont know.</p>                                                                                                                                     |
| <p>37. Proportion which the production by the American manufacturers bears to the consumption?</p>                                                                                                                                                                             | <p>37. Dont know.</p>                                                                                                                                     |
| <p>38. Extent of individual and household manufacture in the United States, and how much it has increased since the tariff of 1824?</p>                                                                                                                                        | <p>38. Dont know.</p>                                                                                                                                     |
| <p>39. Average profit of money or capital in the United States?</p>                                                                                                                                                                                                            | <p>39. Dont know.</p>                                                                                                                                     |
| <p>40. Average rate of wages?</p>                                                                                                                                                                                                                                              | <p>40. Answered in the 12th query.</p>                                                                                                                    |

DANIEL LORENE, *Agent.*

To the Hon. CHAS. KINSEY,  
*New Prospect, Bergen County.*

## DOCUMENT 11.—No. 27.

*John Morrow's Statement of Woollen Factory, County of Bergen, State of New Jersey.*

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                                                            |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. County of Bergen, State of New Jersey.                                                                                                                           |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Woollen factory; water power.                                                                                                                                    |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. Established in 1825. Individual property—owned by John Morrow.                                                                                                   |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. Thirty thousand dollars.                                                                                                                                         |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                                                                                                                                                                                     | 5. About 20 thousand dollars of floating capital.                                                                                                                   |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory, distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed? | 6. The establishment is not worth first cost after paying lawful interest, nor could it be sustained without the greatest economy.                                  |
| 7. Cause of the increase (or decrease, as the case may be) of profit?                                                                                                                                                                                                                                | 7. Owing to the quantity of coarse woollen goods, and coarse cotton imported, and coming in competition.                                                            |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 8. Mercantile, 15 per cent.; agriculture, 5 per cent. per annum.                                                                                                    |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. 120 thousand yards satinets, from 40 to 75 cts. per yard, for 7 years, annually.                                                                                 |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                      | 10. 50 thousand pounds American wool; 25 thousand pounds foreign: the former, last year, at 55 cts. per lb., this year 20 per cent. less; the latter in proportion. |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                      | 11. No satinets imported as I know.                                                                                                                                 |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                    | 12. 40 men at \$5 per week; 16 girls, over 16 years, at \$2 50 per week; 18 boys and girls, from 12 to 16 years, average wages at \$1 50.                           |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                                                                     | 13. 11 hours per day, year through.                                                                                                                                 |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                     | 14. The same wages and steady employment in this country; in other (foreign) countries, one-fourth.                                                                 |
| 15. Number of horses, or other animals employed?                                                                                                                                                                                                                                                     | 15. 3 horses.                                                                                                                                                       |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                            | 16. To New York, 16 miles, the only market.                                                                                                                         |
| 17. Whether foreign articles of the like kind enter into competition with them at such place of sale; and to what extent?                                                                                                                                                                            | 17. Large quantities of imported goods. See 7th query.                                                                                                              |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                             | 18. In all parts of the United States.                                                                                                                              |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                                                             | 19. Some to South America.                                                                                                                                          |

## QUESTIONS.

20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?

21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?

22. The prices at which the manufactures have been sold by the manufacturer since the establishment?

23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?

24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?

25. What has been the rate of your profits, annually, for the last three years?—and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually?

26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?

27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?

28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?

29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to  $12\frac{1}{2}$  per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?

30. If it would cause you to abandon your business, in what way would you employ your capital?

31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to  $12\frac{1}{2}$  per cent.?

32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?

## ANSWERS.

20. Sold at 8 months' credit. I pay 5 per cent. for selling.

21. The labor the same, but more facility by improved machinery, wool advanced 75 per cent. from 1829 to 1831; now from 20 to 25 per cent. less, and still on the decline, which is owing to the quantity of American wool in market this year.

22. 1825, 75 cts. per yard; 1826, 55 cts.; 1827, 40 cts.; 1828, 45 cts.; 1829, 47 cts.; 1830, 52 cts.; 1831, 55 cts.; 1832, to this date, 45 cents per yard.

23. I leave this to the wisdom of Congress.

24. I think there is.

25. Answered in 6th query.

26. Two-thirds is about the raw material, and one-third labor and profits, &c., &c.

27. 251 individuals are clothed and fed by the establishment with the productions and manufacture of the country, and three-fourths of the raw material is of domestic production.

28. 660 thousand yards is produced in this State; other States I cannot say the extent.

29. I think my capital would be entirely lost.

30. I should have none to employ otherwise. I think my capital would be entirely lost.

31. Should such a reduction take place, there would not be a woollen factory in operation in the country in 12 months.

32. This I am not acquainted with.

| QUESTIONS.                                                                                                                                                                                                       | ANSWERS.                                                                                            |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------|
| 33. Amount of capital; and what proportion the borrowed capital bears to that which is real?                                                                                                                     | 33. Answered in 4th and 5th queries.                                                                |
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent. and how gradual the reduction should be?                                         | 34. Refer to 6th query: a small reduction would cause inevitable ruin to the wool-len manufacturer. |
| 35. If minimums should be abolished, and the duty assessed upon the actual value of the imported article in the American port, what rate of ad valorem duty would be equivalent to the present with the minimum? | 35. I cannot say.                                                                                   |
| 40. Average rate of wages?                                                                                                                                                                                       | 40. Answered in 12th query.                                                                         |

The Hon. C. KINSEY.

DEAR SIR: Annexed is my answers to the different queries; which, I trust, you will find correct by corresponding answers from other manufacturers.

Yours respectfully,

JOHN MORROW.

NORTH PATERSON, 2d April, 1832.

## DOCUMENT 11.—No. 28.

*Letter from J. R. Clauson to Charles Kinsey, enclosing statements of four Woollen Manufactories situated in Salem County, State of New Jersey.*

WOODSTOCK, 9th April, 1832.

SIR: Enclosed I send you schedules of four of our woollen manufactories in this county. I could not get them sooner.] Two others remain, which I could not get: they average about the same as the others.

Yours, respectfully,

J. R. CLAUSON.

## DOCUMENT 11.—No. 29.

*Schedule of Capital invested, description and quantity of Goods annually made, the quantity of all Materials annually used, and other particulars relative to the Pilesgrove Factory, situated in the township of Pilesgrove, County of Salem, and State of New Jersey, for the year A. D. 1831.*

|                                                                                               | Articles of the growth or production of foreign countries. |                         | Articles of the growth or production of the United States. |                         |

## DOCUMENT 11.—No. 34.

NEW PROSPECT, N. J. April 28, 1832.

SIR: In answer to your circular of the 7th February, requesting a statement of the manufactures of the State of New Jersey, I beg leave to present you with the following facts as it respects the manufactory of iron in the eastern section of the State:

1st. There are now in operation 100 forge fires, that make annually 2,750 tons of bloomed bar iron, making an average of 25 tons per each forge fire.

The amount of capital-invested embraces the following items:

|                                                                                                                                                                                                                                         |                     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|
| 1st. The cost of erecting 110 forge fires, at an average expense, including machinery, dams, coal houses, &c. of \$1,500 each                                                                                                           | \$ 165,000          |
| 2d. Amount invested in wood land, allowing each fire to require 1,000 acres for its support, in producing its proportion of the 2,750 tons, equal to 110,000 acres, at an average price (the water privilege included) at \$10 per acre | 1,100,000           |
| 3d. The expense of teams, tools, &c. for each forge fire, at \$ 500                                                                                                                                                                     | 55,000              |
| 4th. Cost of dwelling-houses for the accommodation of workmen, allowing to each fire five houses, at \$ 200 each                                                                                                                        | 110,000             |
| 5th. Amount of floating capital necessary to conduct the business, \$500 to each fire                                                                                                                                                   | 55,000              |
|                                                                                                                                                                                                                                         | <u>\$ 1,485,000</u> |

2d. The number of workmen employed in the business, allowing each fire to require two forge men, two colliers, two cartmen, one coal stocker, five wood choppers, and a carpenter and blacksmith equal to one hand, making in all 13 hands to a fire, is 1,430 men, who, with their families of five persons each, make the number of souls dependant on the works 7,150.

3d. The facilities for extending the business are ample; there are now in operation, as appears by the before mentioned statement, 110 forge fires, producing 25 tons each per annum; were sufficient protection continued, it is presumed that these fires would be made to produce 40 tons each per annum in place of the present quantity, and that a number more of equal ability would soon be put in operation, all of which could be fully supported with the materials used in the manufactory.

4th. The results of the business and details of the manufacturing a ton of iron, taken from the most intelligent and accurate of the manufacturers, and after comparing various statements, the following may be considered as the real cost of producing a ton of bloomed bar iron:

|                                                            |                 |
|------------------------------------------------------------|-----------------|
| Three tons of ore, at an average price of \$ 5 per ton, is | \$ 15 00        |
| Ten loads of coal, at \$ 4                                 | 40 00           |
| Small repairs of forge, at \$ 1 50 per ton                 | 1 50            |
| Stocking ten loads of coal, at 12½ cents per load          | 1 25            |
| Wages of workmen for making one ton                        | 16 50           |
| Average cost of cartage and freight—one ton to New York    | 5 00            |
|                                                            | <u>\$ 79 25</u> |

The average price in New York, for most of the time during the last fourteen years, has not been greater than it now is, from \$ 70 to \$ 80 per ton.

In the above statement of cost in making a ton of iron, it is assumed that the coal and ore are purchased by the manufacturer at the current prices. If, however, the coals are made upon his own premises, and the ore raised from his own mine, the following estimate will show the result:

|                                                                     |                 |
|---------------------------------------------------------------------|-----------------|
| Cost of cutting 30 cords of wood for one ton, at 37½ cents per cord | \$ 7 50         |
| Coaling ten loads of coal, at \$ 1 50                               | 15 00           |
| Carting ten loads of coal, at \$ 1 00                               | 10 00           |
| Stocking ten loads of coal, at 12½ cents                            | 1 25            |
| Raising three tons of ore, at \$ 1 50                               | 4 50            |
| Carting three tons of ore, at \$ 1 00                               | 3 00            |
| Making one ton of iron (wages)                                      | 16 50           |
| Small repairs of forge per ton                                      | 1 50            |
| Cartage and freight of one ton iron to New York                     | 5 00            |
|                                                                     | <u>\$ 64 25</u> |

Should an allowance be made in the last estimate for the value of the standing wood, and in making coal, of the ore in the mine, the following sum should be added to the amount of the estimate—20 cords wood standing, at 50 cents

Three tons of ore in the mine, at \$ 1 50

\$ 78 75

## DOCUMENT 11.—No. 34—Continued.

You will perceive that the foregoing estimate includes no account of interest of capital invested, decay of works, expense of managing, taxes, &c.; neither is there any provision made for risks or losses, although the business is exposed to both.

You will also perceive, that in this statement, no estimate has been submitted of the amount of capital invested in mines, or the cost of opening them, from the impossibility of arriving at any satisfactory result. It can only be stated that there are 50 iron mines in this district already opened; 15 of which are at present worked; that the quantity of good ore is inexhaustible. The above statement is strictly confined to facts as connected with the manufacture of bloomed bar iron.

Of furnaces, there are several, but none in blast.

Of rolling mills, there are the following: as

|                                                                                                |      |       |
|------------------------------------------------------------------------------------------------|------|-------|
| 1st. Dover, which converts into rolled iron annually, of the iron manufactured in the district | tons | 1,000 |
| 2d. Rockaway, which rolls annually, of the iron of the surrounding country                     |      | 283   |
| 3d. Booneton, which rolls from scrap iron from England, and pig iron, after the English method |      | 968   |

Tons 2,250

Giving at those three works 447 men: according to the common calculation there are two thousand souls dependant on those rolling mills.

There are 110 forge-fires distributed through East New Jersey, included in a district of fifty miles square; their location is amidst a rocky, mountainous region, incapable of being appropriated to agricultural pursuits, but containing inexhaustible mines of the best iron ore. The lakes in this region of magnetic iron, furnishing more hydraulic resource than any other country of the same extent. The proprietors of the works do not fear a competition with the iron of Russia or Sweden, as it must ever be limited, and is of an excellent quality. It is the inferior rolled iron of England that operates to the injury of the iron of this country, and should the inferior iron be permitted to compete with the superior hammered iron of this country, the works most accessible to the sea-ports must stop all operation, and the whole region dependant on the making of iron, in a great measure, become depopulated; and once destroyed, no future legislation would be able to restore to active operation the inexhaustible, though dormant resources of the richest mineralogical region in the world.

All which is respectfully submitted.

I am, respectfully,

Your obedient servant,

CHARLES KINSEY.

The Hon. LOUIS McLANE,

Secretary of the Treasury of the United States.

## DOCUMENT 11.—No. 35.

*Joseph Jackson & Son's Statement of Iron made and bought at their Works in Rockaway, N. J.*

An account of Iron made by Joseph Jackson & Son, at their Forge, consisting of three fires, situate at Rockaway, Morris county, New Jersey, since 3d March, 1826, to 3d March, 1831. Whole amount made, 383 tons; making an average of 76 tons 12 cwt. per year, as stated below, with the value per ton each year.

| From March, 1826 to 1827. |      |       | From March, 1827, to 1828. |      |       | From March, 1828, to 1829. |      |       | From March, 1829, to 1830. |      |       | From March, 1830, to 1831. |      |       | Made since the 3d Mar. 1831, to 15th Oct. 1831. |      |       |

## DOCUMENT 11.—No. 35—Continued.

An account of Iron bought by Joseph Jackson & Son, since the 7th March, 1826, to 7th March, 1831, and rolled at their Rolling Mill, in Rockaway, Morris county, New Jersey, showing the amount bought in each year, with the value per ton.

| From March, 1826, to 1827. |      |       | From March, 1827, to 1828. |      |       | From March, 1828, to 1829. |      |       | From March, 1829, to 1830. |      |       | From March, 1830, to 1831. |      |       | Since March, 1831, to 15th Oct. 1831. |      |       |
|----------------------------|------|-------|----------------------------|------|-------|----------------------------|------|-------|----------------------------|------|-------|----------------------------|------|-------|---------------------------------------|------|-------|
| Tons.                      | Cwt. | Value | Tons.                      | Cwt. | Value | Tons.                      | Cwt. | Value | Tons.                      | Cwt. | Value | Tons.                      | Cwt. | Value | Tons.                                 | Cwt. | Value |
| 250                        | 6    | \$84  | 239                        | -    | \$76  | 187                        | -    | \$74  | 146                        | -    | \$73  | 185                        | -    | \$68  | 173                                   | 12   | \$75  |

The number of tons of iron rolled at the above works, in each year, since March, 1826, to March, 1831, is as follows, viz. from March, 1826, to 1827, 356 tons 18 cwt.; to 1828, 315 tons 12 cwt.; to 1829, 263 tons 12 cwt.; to 1830, 222 tons 12 cwt.; to 1831, 261 tons 12 cwt.; since March, 1831, to Oct. 15, 1831, 240 tons. Since March 1, 1830, to Oct. 15, 1831, rolled at the above mill 129½ tons of American steel.

Account of number of Hands employed by Joseph Jackson & Son, at their works, and of the number dependant on the works for a living, not actively employed.

| Rolling mill hands. |       |        | Bloomers. | Colliers. | Misners. | Blacksmiths. | Carpenters. | Miller and Sawyer. | Boatmen. |       | Others dependant on the works for living, of all ages and sexes.                             |
|---------------------|-------|--------|-----------|-----------|----------|--------------|-------------|--------------------|----------|-------|----------------------------------------------------------------------------------------------|
| Men.                | Boys. | Total. | Men.      | Men.      | Men.     | Men.         | Men.        | Men.               | Men.     | Boys. |                                                                                              |
| 9                   | 4     | 13     | 6         | 12        | 4        | 2            | 2           | 2                  | 2        | 1     | 65—besides 6 men and 4 boys employed about the works, making a total of 119 souls dependant. |

Teams owned by J. J. & Son: one 4 mule team, two 2 horse teams, two yoke of oxen, and one horse for boating. Teams employed and not owned, carting coal, ore, and iron: one 4 mule team, one 2 horse team, and one yoke of oxen.

April 18, 1832.

JOSEPH JACKSON & SON,  
Per HENRY BEACH.

## DOCUMENT 11.—No. 35—Continued.

## CAPITAL EMPLOYED.

We have a concern in four iron mines, the capital of which is valued at \$26,000  
 Average price of ore at the mines is \$3 per ton, and if necessary, will yield 5,000  
 tons per annum, the net profit on which will average, at 50 cents 2,500  
 1,883 acres of land, including farm lands, and where the works stand, valued at 75,390

We use 200 tons of bituminous coal, and 150 tons of anthracite coal, and about 84,000  
 bushels of charcoal per annum.

Can roll 800 tons of iron and steel per annum into all the various sizes of round, square,  
 and flat iron, except sheet iron.

| QUESTIONS.                                                                                                                                                                                                                                                                                               | ANSWERS.                                                                                                                                                                                                 |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                                | 1. New Jersey, Morris and Bergen counties.                                                                                                                                                               |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                     | 2. Three forge fires; water power.                                                                                                                                                                       |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                                  | 3. One in Morris county, about 70 years since, and two in Bergen county, put in operation in 1826.<br>4. \$50,000.                                                                                       |
| 4. Capital invested in ground and buildings, and water power and in machinery?                                                                                                                                                                                                                           | 5. About \$8,000 per annum.                                                                                                                                                                              |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                          | 6. No profit for the last 14 years, but a loss; not having received interest on capital invested.                                                                                                        |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory: distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of the profit upon that portion which is not borrowed? | 7. Loss of interest on capital invested, owing to foreign competition, especially the English rolled iron, which is so far inferior in quality, and for want of a proper construction of the tariff law. |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                                  | 9. About 100 tons of bloomed bar iron, which has not averaged \$80 per ton for the last 14 years.                                                                                                        |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                    | 10. 80,000 bushels charcoal, and 300 tons of ore, worth \$5,500; the balance, provisions and wages paid, amounting in all to \$8,000 per annum; wholly domestic.                                         |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                          | 11. Russia and Swedes refined iron, (the nearest resemblance;) average price about \$90 per ton.                                                                                                         |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                          | 12. About 50 able-bodied men at an average of \$1 per day.                                                                                                                                               |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                        | 13. Forgemmen, 15 hours; colliers, day and night; others, 12 hours; forgemmen, 10 months; colliers, 9 months; others, the year round.                                                                    |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                         | 15. 20 horses, mules, and oxen.                                                                                                                                                                          |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                          |                                                                                                                                                                                                          |

| QUESTIONS.                                                                                                                                                                                                                                                              | ANSWERS.                                                                                                                                                                                                          |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                               | 16. New York city, about 36 miles.                                                                                                                                                                                |
| 17. Whether foreign articles of the like kind enter into competition with them at such place of sale; and to what extent?                                                                                                                                               | 17. Yes; from all parts of the world.                                                                                                                                                                             |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                | 18. In the United States.                                                                                                                                                                                         |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                                | 19. No.                                                                                                                                                                                                           |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                              | 20. Generally at four months.                                                                                                                                                                                     |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?             | 21. The price of labor has not decreased in proportion to the price of the iron.                                                                                                                                  |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                    | 22. From 70 to \$80 per ton.                                                                                                                                                                                      |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                              | 23. Only prohibit the English rolled iron, and I have no objection to the Russia and Swedes iron being admitted free of duty, because it is a good article.                                                       |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                                        | 24. All iron manufactured in whole or in part <i>by rolling</i> , ought to pay \$37½ per ton, or be prohibited, as the greatest fraud is practised upon the rolled iron. No hammered bar iron comes from England. |
| 25. What has been the rate of your profits, annually, for the last three years?                                                                                                                                                                                         | 25. Nothing.                                                                                                                                                                                                      |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                            | 26. See answer to the 10th query.                                                                                                                                                                                 |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                        | 27. See 10th.                                                                                                                                                                                                     |
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                                                                                                                    | 28. See Report of the Tariff Convention in New York, in October last.                                                                                                                                             |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. <i>Certain death</i> to the business.                                                                                                                                                                         |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                          | 30. I should have none.                                                                                                                                                                                           |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                                                                           | 31. No; this portion of the State being peculiarly adapted to the manufacture of iron.                                                                                                                            |

| QUESTIONS.                                                                                   | ANSWERS.                                                            |
|----------------------------------------------------------------------------------------------|---------------------------------------------------------------------|
| 33. Amount of capital, and what proportion the borrowed capital bears to that which is real? | 33. \$50,000 inherited, otherwise I should have stopped long since. |
| 37. Proportion which the production by the American manufacturers bears to the consumption?  | 37. See Report of the Tariff Convention.                            |

Respectfully, your obedient servant,

WILLIAM JACKSON.

ROCKAWAY, N. J., 25th April, 1832.

TO CHARLES KINSEY, Esq.

## DOCUMENT 11.—No. 37.

*Green and Wetmore's Statement of Iron, Boonton, Morris County.*

| QUESTIONS.                                                                                                                                                                                                                                                                                               | ANSWERS.                                                                                                                                                                                                                                                                                                                                                            |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                                | 1. At Boonton, Morris county, New Jersey.                                                                                                                                                                                                                                                                                                                           |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                     | 2. Iron; water power.                                                                                                                                                                                                                                                                                                                                               |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                                  | 3. Commenced 1829; ready for operation in the fall of 1831; a chartered company.                                                                                                                                                                                                                                                                                    |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                          | 4. Now invested, \$150,000, and will require \$100,000 more to complete the works besides loose capital to conduct the business.                                                                                                                                                                                                                                    |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory: distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of the profit upon that portion which is not borrowed? | 6. 10th April, 1832; no profit yet, because not fairly in operation.                                                                                                                                                                                                                                                                                                |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                           | 8. Have no other employed.                                                                                                                                                                                                                                                                                                                                          |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                    | 9. 160 tons chain iron, pronounced by Com. Hull better than ever made before in this country, value 4½ cents; we now make better at 6½ cents per lb.; also, 450 tons round and square rods, superior to any ever made in the United States, value \$115 per ton; also, 213 tons sheets superior, value 140 to \$155, and 145 tons boiler iron, value \$160 per ton. |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                          | 10. Three-fourths of the materials will be American pig iron, and ¼ of scrap iron.                                                                                                                                                                                                                                                                                  |
| 13. Number of men, women and children employed, and average wages of each class?                                                                                                                                                                                                                         | 12. 200 men, \$2 per day; 20 boys, 3s. 6d.                                                                                                                                                                                                                                                                                                                          |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                                | 16. All sent to New York.                                                                                                                                                                                                                                                                                                                                           |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?</p> <p>25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually?</p> <p>27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?</p> <p>29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?</p> <p>30. If it would cause you to abandon your business, in what way would you employ your capital?</p> <p>32. Are not the manufactures of salt and iron, remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?</p> | <p>23. We would say let the duty remain where it is; if increased, the competition would naturally increase; if reduced, we cannot make it a business worth pursuing; but if it remains as it is, we can get a fair per centage on our capital, and no more.</p> <p>25. No dividend yet declared, not fairly in operation.</p> <p>27. Our location is such, that we are entirely dependant upon the surrounding country for the necessaries of life, and the farmers hereabouts are not a little benefited by it.</p> <p>29. We could not make it profitable, as we could not reduce the workmen's wages to correspond with the decline that would take place in the prices of iron.</p> <p>30. If such a reduction should take place, we should have no capital, as it is now all invested in machinery, buildings, &amp;c., which would decline in the same ratio with the manufactured article.</p> <p>32. There is no demand for the manufactured article at the manufactory: all sent to New York.</p> |

DOCUMENT 11.—No. 38.

*M'Farland and Ayres' Statement of Iron, Dover, Morris County.*

| QUESTIONS.                                                                                                                                                                                                                  | ANSWERS.                                                                                                                                                                                                                                                                                               |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>1. State and county in which the manufactory is situated?</p> <p>2. Kind or description of the manufactory, and whether water, steam, or other power?</p> <p>3. When established; and whether a joint stock concern?</p> | <p>1. Morris county, State of New Jersey.</p> <p>2. Three mills for rolling and slitting iron, one chain cable shop, one cupola and air furnace, and two forges; water power.</p> <p>3. 1792, 1793, 1800, 1822, 1826, 1823, 1830; proprietors incorporated, but act of incorporation not acted on.</p> |

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                                                                                                                                        |
|---------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                       | 4. One hundred thousand dollars.                                                                                                                                                                                |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                      | 5. Cash paid for materials and labor, ninety-five thousand dollars.                                                                                                                                             |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 9. Castings in 1828, 7 ton, in 1829, 65 ton, in 1830, 237 ton; bar iron in 1828, 97 ton, in 1829, 105 ton, in 1830, 128 ton; rolled from the bar into different sizes during same years, 651, 821, and 817 ton. |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?       | 10. 1,000 tons American bar iron, from \$70 to \$90 per ton, annually.                                                                                                                                          |
| 12. Number of men, women and children employed, and average wages of each class?                                                      | 12. 200 men, average wages 8s. per day.                                                                                                                                                                         |
| 13. How many hours a day employed? and what portion of the year?                                                                      | 13. 10 hours per day, and employed all the year.                                                                                                                                                                |
| 14. Rate of wages of similar classes otherwise employed, in the same State and county, in other States, and in foreign countries?     | 14. 6s. per day.                                                                                                                                                                                                |
| 15. Number of horses or other animals employed?                                                                                       | 15. Sixty horses, mules, and oxen.                                                                                                                                                                              |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                             | 16. 35 miles, to New York.                                                                                                                                                                                      |

## DOCUMENT 11.—No. 40.

*Iron Manufactures in West Jersey.*

PHILADELPHIA, April 26, 1832.

Annexed you have our replies to the queries proposed in your circular under date March 6th, last, which we had the honor to receive from you.

Very respectfully, &c.,

BENJAMIN & DAVID REEVES.

CHARLES KINSEY, Esq.

## ANSWERS TO QUERIES.

1. Cumberland county, State of New Jersey.
2. Rolling mill, cut-nail manufactory, and foundry; water power employed.
3. Established in 1815, jointly, by Benjamin Reeves and David Reeves.
4. At this time the capital invested, as above, is 90,000 dollars.
5. Materials and wages paid for, in cash, amount yearly to 130,000 dollars.
6. There has been no profit realized on that portion of the capital which was borrowed, after providing for the interest.
7. Production, when greater than consumption, diminishes profits, and vice versa.
8. Cannot answer this query in its general scope.
9. In the year 1816 the articles manufactured were 100 tons of nails, and 100 tons of hoop and band iron. The price of nails from January to June averaged 11 cents per pound, and from June to December 8½ cents per pound; the hoop and band iron averaged, from January to June, 170 dollars per ton, and from June to December 140 dollars per ton. Since when the manufacture has been increasing, annually, to its present extent, which was, in the year 1831, 1,100 tons of nails, and 400 tons round, square, and hoop iron, 130 tons castings. The average price of the nails 5 a 37 cts. per pound, rolled iron 100 dollars per ton, and castings 55 dollars per ton.
10.

|                                       |   |   |   |   |   |   |          |
|---------------------------------------|---|---|---|---|---|---|----------|
| 1,200 tons bloom iron,                | - | - | - | - | - | - | \$80,400 |
| 450 tons wrought scraps,              | - | - | - | - | - | - | 14,850   |
| 40,000 bushels bituminous coal,       | - | - | - | - | - | - | 8,800    |
| 300 tons anthracite coal,             | - | - | - | - | - | - | 1,800    |
| 150 tons cast metal,                  | - | - | - | - | - | - | 3,300    |
| wood for kegs,                        | - | - | - | - | - | - | 2,000    |
| steel and other materials for repair, | - | - | - | - | - | - | 3,000    |
- All domestic, except steel and grindstones.
11. We do not possess the necessary information to answer this query.
12. 82 men, average 1 dollar per day; 28 boys, 50-cents per day.
13. 12 hours per day; average 300 days per year.
15. None—the transportation is by water.
16. Very little sold at the manufactory; chiefly sent 100 miles to Philadelphia, by water, and, from thence, to most of the important southern markets of the United States.
17. There are no cut nails imported; round and square, bolt iron and hoop iron is imported from England, and comes in competition with that description of our manufacture: within the last 12 months the imported has interfered but little.
18. Throughout our southern seaboard, extending far into the interior; up the Mississippi and Ohio as far as Louisville, and, in some instances, to Cincinnati.
19. Nails are exported to the West Indies and South America in small quantities.
20. Nails are sold on a credit of 6 months, and rolled iron and castings at 4 months, either of which is seldom bartered.
21. The cost, to the manufacturer, has fluctuated by changes of prices of the materials, which, on the average, has diminished since 1816; there has also been a decrease in the price of labor, and the same labor has become, and is still growing more efficient from greater experience. The cost has also diminished, and continues to diminish by progressive improvement of the general economy in the operations, but how much in each year cannot be distinctly stated.
22. In 1816 nails were sold at 11 cents to 8½ cts. per pound; since when, the price has fluctuated between the latter, say 8½ cts. to 5 cts., and were sold at the latter price in the early part of 1831.
23. We cannot say what would be the lowest rate of duty that would protect us from competition of the cheap machinery, labor, and capital of England, and especially against

the power of her great capital, *directed by policy*, to break down our establishments by *sacrifices* to an amount that would ruin our proprietors, thus leaving the business in her hands when her losses would be soon repaired by the monopoly thus achieved. The domestic manufacture of nails cannot be made cheaper by foreign competition, unless it bring about a general reduction of the price of labor in this country.

24. No change in levying or collecting the duty is necessary.

25. The answers to this query may be injurious to our concern; we therefore omit them.

26. The proportions of the cost of raw materials to that of the labor employed, are as four of the former to one of the latter, nearly.

27. The labor is all paid for in cash; therefore, no account of the agricultural and other domestic products consumed by the laborers has been kept.

28. From the best information we possess, the quantity of nails made in the United States is about 25,000 tons, and in this State about 2,000 tons: we cannot state the quantity of iron rolled.

29. If the duty on nails and iron be reduced to 12½ per cent., no protection would be left to the former; which would be imported at the same rate of duty as the iron of which they would be made. The advantages of cheap *foreign* machinery, labor, and capital, would compel us to abandon the business.

30. Mercantile operations now afford as profitable employment *as our business*; but what effect an abandonment of manufacturing would have on the profits of other branches of industry in this country we do not foresee; therefore, cannot say in what way our capital and labor could be profitably employed.

31. Every business that is now pursued, *with success*, affords better profits than ours would do were the duties reduced to 12½ per cent. on all imports.

32. Some of these are so remote from points of importation as to require no protection: these, however, bear but a small proportion to the whole. The extent of the circle will increase as the establishments may be remote from the points of importation.

34. Domestic competition has kept the profits on the amount of the business and capital invested below 6 per cent.: therefore, any reduction of duty that would reduce profits, by foreign competition, would endanger our business, and, consequently, our estates; any reduction of duty that would not effect a reduction of profits, could not effect the interest of either the manufacturer or consumer, and would, therefore, be nominal.

37. The whole consumption is supplied by the domestic manufacture of nails; more than half the iron of which they are made is imported from Russia and Sweden.

In addition to the cost of materials, labor, &c., enumerated above, there are numerous other items of expense incident to the business; such as transportation from the place of manufacture to the various markets, where the sales are effected; insurances, commissions, and incidental charges on selling, &c.

PHILADELPHIA, April 27th, 1832.

SIR: According to your request, I have obtained a gross statement of the iron works in West Jersey, including Monmouth county, as obtained for the New York Convention. This statement I obtained from B. B. Howel, esq., who has the original documents in his possession.

11 furnaces, making 1,542 tons of pigs, 6,486 of castings, annually; and 11 forges, making 1,652 tons bar and bloom iron.

Very respectfully, &c.,

BENJAMIN REEVES.

CHARLES KINSEY, Esq.

## DOCUMENT 12.—No. 1.

## REPORT OF CHARLES KINSEY TO THE SECRETARY OF THE TREASURY.

*Statement of Iron, Cotton, and Woollen Manufactories in the State of New Jersey.*

New Passaic, May 1st, 1832.

Sir: The following is the statements of the products of iron, wool, and cotton, as far as it has been possible to procure.

Statement of iron, as it respects the eastern section of the State, to wit:

Now in operation 110 forge fires.

|                                                      |           |
|------------------------------------------------------|-----------|
| Capital invested in works,                           | \$165,000 |
| In woodlands and water power,                        | 1,100,000 |
| In teams and tools,                                  | 55,000    |
| In dwelling-houses, &c.,                             | 110,000   |
| Amount of capital necessary to conduct the business, | 55,000    |

\$1,485,000

Number of tons annually produced, 2,750, valued at \$75 per ton, 2,062,250

Number of workmen employed, 1,430, at \$6 per week, 427,000

Number of persons dependant, 7,150.

The following is also the statement of the woollen manufactures in the State:

Amount of capital employed, \$425,000

Number of persons employed, 1,331,

Supported by their wages, 1,406,

Amount of wages, 155,831

Average value of goods, 728,000

Articles of American production, 337,834 } 476,317

Articles of foreign growth, 138,493 }

Interest, agency, insurance, &c., not calculated, but not less than ten per cent.

In making a return of the cotton, from the incorrect state of the returns, it is impossible to arrive at any certainty further than the amount of capital employed, the amount of which has been obtained from the proprietors, principally. Many are new establishments, and have had no settlement of their concern. The amount of the capital, I have no doubt, is correct.

Amount of the number of mills is 53.

Capital invested in buildings, water rights, and machinery, \$1,893,500

John Travers and Company own the only hemp, canvass, and cotton bagging factory in the State. Capital invested 170,000

Wages and raw materials, 117,000

Raw material 600,000 lbs. flax, at 10½ cents, 63,000 }

Wages, 54,000 } 117,000

All which is respectfully submitted.

I am, respectfully,

Your obedient servant,

CHARLES KINSEY.

The Honorable LOUIS McLANE,

Secretary of the Treasury of the United States.

# MANUFACTURES.

## RETURNS FROM THE STATE OF PENNSYLVANIA.

---

### DOCUMENT 13.—No. 1.

PHILADELPHIA, *May 4th*, 1832.

SIR: The undersigned, appointed commissioners, by the Secretary of the Treasury, to collect the information called for by two resolutions of the House of Representatives, of the 19th January last, in regard to the State of Pennsylvania, respectfully report:

That, on the 15th February last, they severally received the letters of the Secretary of the Treasury, a copy of which is annexed; and that on the next day one of them, C. C. Biddle, in answer thereto, submitted to the department, for its approbation, a plan for obtaining the information called for, embracing the appointment of A. M. Prevost, as the assistant, and, at the same time, forwarded copies of circulars proposed to be issued.

Under the authority of the Secretary's appointment, the two commissioners, believing that the inquiries would be best promoted by uniting their efforts, determined, in conjunction, to carry into effect the plan sanctioned by the department, and, accordingly, authorized Mr. Prevost, as their agent, to frame the annexed new circulars. These were extensively circulated, and due diligence was used to procure as much pertinent information as was practicable by personal inquiries of all the principal manufacturers in this neighborhood.

After pursuing these inquiries for several days longer in Philadelphia, and its immediate vicinity, the commissioners deemed it absolutely necessary that Mr. Prevost should proceed to the seat of the State Government, and also visit the principal manufacturing counties of the eastern district, so that, by personal examination, every possible effort might be made to fulfil the requisitions of the department.

On the 18th April, the Secretary's letter, terminating the functions of Mr. Prevost, the only agent they had employed, was received; and it became necessary, in conformity with the instructions of the department, to digest and report the result of their united labors.

The nature and extent of the difficulties the commissioners have met in obtaining the information called for by the resolutions of the House of Representatives will appear by Mr. Prevost's report. Their exertions being suspended, they have to regret, as well as their assistant, the very imperfect character of the information herewith submitted to the department; but, should it be deemed expedient to pursue these inquiries further, in order to obtain complete returns of all the manufacturing establishments, the present labors of the commissioners will much facilitate the means of obtaining these results. The mass of facts now presented they owe to the judicious, active, and unremitting exertions of their able assistant.

We have the honor to be, very respectfully, sir, your obedient servants,

MATHEW CAREY,  
CLEMENT. C. BIDDLE.

To the Hon. LOUIS McLANE,  
*Secretary of the Treasury, Washington.*

---

### CIRCULAR.

PHILADELPHIA, *March 22d*, 1832.

SIR: Having been directed by the Secretary of the Treasury, under the authority of two resolutions of the House of Representatives, passed the 19th January, to collect and report

such facts as may be necessary to a full knowledge of the manufactures of the United States as far as respects the State of Pennsylvania, we take the liberty of asking your attention to the accompanying queries prepared by the Treasury Department, and of soliciting such answers to them as it is hoped you may be able to furnish, which you will please to designate by numbers corresponding with the queries. It is, however, not intended to exclude any other facts you may think pertinent, or which may be considered essential to a just view of your interests.

As great delay has taken place from unforeseen circumstances, and as the information called for by the House of Representatives is desired as a basis for legislation with a view to the adjustment of the tariff during the present session, we shall be excused for urging upon you an immediate reply, to enable us to make the report to the department within the time limited.

We are, sir, very respectfully, your obedient servants,

MATHEW CAREY,  
CLEMENT C. BIDDLE.

#### LIST OF QUERIES.

1. State and county in which the manufactory is situated?
2. Kind or description of manufactory; and whether water, steam, or other power?
3. When established; and whether a joint stock concern?
4. Capital invested in ground and buildings, and water power, and in machinery?
5. Average amount in materials, and in cash for the purchase of materials, and payment of wages?
6. Annual rate of profit on the capital invested since the establishment of the manufactory, distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of the profit upon that portion which is not borrowed?
7. Cause of the increase, (or decrease, as the case may be,) of profit?
8. Rates of profit on capital otherwise employed in the same State and county?
9. Amount of articles annually manufactured since the establishment of the manufactory; description, quality, and value of each kind?
10. Quantity and value of different kinds of raw materials used, distinguishing between foreign products and domestic products?
11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?
12. Number of men, women, and children employed, and average wages of each class?
13. How many hours a day employed, and what portion of the year?
14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?
15. Number of horses or other animals employed?
16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?
17. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?
18. Where are the manufactures consumed?
19. Whether any of the manufactures are exported to foreign countries; and if so, where?
20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?
21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?
22. The prices at which the manufactures have been sold by the manufacturer since the establishment?
23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?
24. Is any change necessary in levying or collecting the duty on such articles, to prevent fraud?
25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and, therefore, not divided out annually?
26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?
27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?

28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?

29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to  $12\frac{1}{2}$  per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?

30. If it would cause you to abandon your business, in what way would you employ your capital?

31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to  $12\frac{1}{2}$  per cent.?

32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?

33. Amount of capital, and what proportion the borrowed capital bears to that which is real?

34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of six per cent.? and how gradual the reduction should be?

35. If minimums should be abolished, and the duty assessed upon the actual value of the imported article in the American port, what rate of ad valorem duty would be equivalent to the present with the minimum?

36. What would be the operation of this change upon the frauds at present supposed to be practised?

37. Proportion which the production by the American manufacturer bears to the consumption?

38. Extent of individual and household manufacture in the United States, and how much it has increased since the tariff of 1824?

39. Average profit of money or capital in the United States?

40. Average rate of wages?

### DOCUMENT 13.—No. 2.

*Report of Andrew M. Prevost to the Commissioners.*

PHILADELPHIA, April 20, 1832.

MATHEW CARRY and CLEMENT C. BIDDLE, Esquires.

GENTLEMEN: Under your direction, on the 19th March last, I forwarded through the post-office one hundred and twenty-five circulars to the principal woollen, cotton, and iron manufacturers of the eastern district of this State, after having spent several days in distributing others personally to those within my reach, and in obtaining the names and addresses of those at a distance.

As no provision has been made by the United States to procure, through the marshals, at the time of taking the census, returns of the manufacturing establishments of the country, and as the State of Pennsylvania has likewise hitherto neglected to avail itself of the services of the township assessors to attain the same object, there is no where an authentic record to be found to assist in the proposed inquiry; and it was necessary to employ considerable time and industry to obtain even that preliminary information. From the 19th to the end of the month, I delivered and directed upwards of two hundred more circulars, and inserted in the public papers a request that manufacturers should look for them in the post-offices of the county towns nearest their location. My personal communications with them convince me that they have been very generally received, and that the knowledge of your call for information is extensively circulated.

In further obedience to your desires, I travelled through Chester, Lancaster, Dauphin, Lebanon, Berks, Schuylkill, Lehigh, Northampton, and Bucks counties, to further the objects of the Secretary's letter, and found every where that the subject had attracted the attention of the parties interested.

On my return to this city, I regret to observe the very small number of answers received, which are numbered, filed, and annexed to this, and beg leave to repeat to you what I have had the honor of stating in a former communication.

Two obstacles to the collection of information have, almost in every case, met me at the very threshold: the one a universal objection to several of the queries proposed by the department. With many individuals this has operated, no doubt, as a pretext for disregarding the whole of them. My personal attendance on manufacturers and on members of the Legislature, with the circulation of your judicious additional circular, has enabled me to do away

those unfavorable impressions *to a certain extent*, but by no means *entirely*. In proof of my assertion, I need only refer you to the concluding paragraph of Mr. Ronaldson's letter, No. 4, and to expressions used in letter No. 3, by Mr. Crozier, the active manufacturer's committee member of Delaware county, and of Messrs. Riddle in No. 14. Those gentlemen state plainly their objections and their grounds.

The second difficulty arises from the circumstance of your inquiry having been anticipated by the manufacturing interest at the meeting of their Convention in New York, in 1831. Having very generally transmitted since then, to the indefatigable secretary of that Convention, the statements they wish to place in the possession of either himself or the public, they deem it generally useless to furnish the same matter over again, under a different form, to the Treasury Department, and through a different channel. This has been distinctly stated to me by the Chairman of the Committee on Manufactures of the House of Representatives, who assured me that the Secretary of the Treasury was, or would be, in possession of all the returns from his county, and that it would answer no purpose to forward them again. This abundantly accounts for the silence of the greater number.

Under those essential disadvantages, I am unable to produce before you any thing more than detached reports of several counties, such as a pretty accurate table of the numerous iron works of Berks, and of the manufacturing establishments of the northeastern part of Philadelphia county, partial reports of all the iron works of Schuylkill, Dauphin, and Lancaster counties, and a condensed view of the information contained in the answers received. I should feel mortified at this scanty result of several weeks of assiduous attention, were I not conscious that the utmost industry may be exerted in vain.

It will be recollected that this has only been obtained by personal journeys, visits, and excursions to works and manufactories, without which it was found impracticable to get at facts with any degree of accuracy. From my departure on that service, to the period of the discontinuance of the inquiry by order of the department, the time has been so short that more could not well have been done.

My short experience in this inquiry convinces me, that, if it be an object with Government to obtain statistical reports of the manufactures, with the best answers that can be procured to the many interesting but speculative queries in the list, this can only be done by personal applications to individuals. The persons employed should be enabled to spare the time necessary to elicit those answers. They will have to interrogate many a man who, however intelligent he may be in his particular branch of business, would consider it an herculean task to put down his ideas on paper. From the extent of country to be travelled over, and the number of works which have sprung up in every direction, I do not hesitate to say, that the best part of a year would be consumed by a single individual in this district alone; and need not add, that, unless the information obtained can be fully relied upon, it had better never be sought after. You will find annexed to this—

- A. Abstract of the iron works of Berks county.
- B. Abstract of the manufactories in the northeastern part of Philadelphia county.
- C. Abstract of the manufactories in Delaware county.
- D. Abstract of iron works in Schuylkill county.
- E. Abstract of the iron works in Lancaster county.
- F. Abstract of the iron works in York county.
- G. A condensed statement of the manufacturers' answers.
- H. File containing the originals of those answers, No. 1 to 16.
- DD. Some of the original documents from which the information in abstract A is derived.

All which is respectfully submitted, by your obedient servant,

ANDREW M. PREVOST.

## DOCUMENT 13.—No. 3.

A.—Results of the information obtained by A. M. Presset respecting the Iron Works situated in Berks County, Pennsylvania, April, 1832, exhibiting their products for three years.

| Furnaces.    |         | Owners.             | No. of men employed. | Supposed number of persons dependant upon the establishment at 5 per family. | Number of horses. | Quantity of pig mettle in tons. | Quantity of castings in tons. | Quantity of bar iron in tons. | Quantity of blooms in tons. |

No approximation at the price of wages could be readily obtained, as in iron-works they differ essentially. A good founder may obtain one thousand dollars a year, with one or two boys; while the wagoner, who hauls the coal boxes, receives one hundred or one hundred and twenty dollars, and his board. Wood-choppers are paid thirty-five cents per cord.

## B.—Statements of the Manufactories situated in the northeastern part

| 29         | Give it up at once.                                                   | Abandon.                                                                                                                                                        |                                                                                                                   |
| 30         | More than half would be<br>lost.                                      | Half capital would be sunk.                                                                                                                                     |                                                                                                                   |
| 31&32      | Any other business would<br>be better.                                |                                                                                                                                                                 |                                                                                                                   |
| 34         | - - -                                                                 | At present capital employ-<br>ed yields no interest ade-<br>quate to the risk; any re-<br>duction of duties would<br>endanger the stability of<br>the business. |                                                                                                                   |

Duty on coarse wool should be reduc-  
ed; tariff of 1828 injured the manu-  
facturers. 40 per cent. with reduc-  
tion of duty on wool, better than 60  
without, as wool costs the manu-  
facturer here 40 to 80 per cent. high-  
er than to the European.

| 2, & 3     | Furnace. 1793. Water power.                                                                                                     | Forges. 1830. Water power.                                   |
| 4          | \$42,000. None borrowed.                                                                                                        | 48,000 dollars.                                              |
| 5          | \$25,000. do                                                                                                                    |                                                              |
| 6          | About five per cent.                                                                                                            | 3,000 dollars per annum.                                     |
| 7          | Domestic competition.                                                                                                           | Importation of iron under false denomination.                |
| 8          | In mercantile 8 to 12 per cent.                                                                                                 | 200 tons bar.                                                |
| 9          | 800 tons metal.                                                                                                                 | 300 tons American pig metal.                                 |
| 10         | 5,000 cords wood, and 2,000 tons ore.                                                                                           |                                                              |
| 12         | 95 men, at \$14 per month. 500 persons dependant.                                                                               | 60 men, averaging \$20 per month.                            |
| 13         | 10 hours a day.                                                                                                                 | Six to ten hours year round.                                 |
| 14         | 8 to \$12 the highest wages given elsewhere.                                                                                    | Not known.                                                   |
| 15         | Sixty horses.                                                                                                                   | 30 to 40 mules, 10 oxen.                                     |
| 16         | Pigs sold at the works, a part of the castings in Philadelphia.                                                                 | Philadelphia and Baltimore.                                  |
| 17         | -                                                                                                                               | Foreign iron sold as old iron scraps.                        |
| 18         | United States, So. America, and Africa.                                                                                         | Chiefly in Philadelphia and Baltimore.                       |
| 19         | -                                                                                                                               | Not exported.                                                |
| 20         | Six months.                                                                                                                     | Six months' credit.                                          |
| 21         | Cost of manufacturing increased from 15 to 25 per cent.                                                                         | Cost has increased 15 per cent.                              |
| 22         | -                                                                                                                               | Average 82 dollars per ton.                                  |
| 23         | Pigs 25, 31, 28. Castings 60, 75, 65.                                                                                           |                                                              |
| 24         | Duty requisite. A small reduction would have the same effect as the repeal of the whole.                                        | Present duty, and preventing introduction under false names. |
| 25         | -                                                                                                                               | Very trifling profit.                                        |
| 27         | 7,000 bushels grain; 22,000 lbs. pork; 15,000 lbs. beef; and domestic cotton goods \$1,600, are consumed yearly at the furnace. | 3,000 bushels rye; 1,200 bushels oats; 900 bushels wheat.    |
| 29         | -                                                                                                                               | Be forced to abandon.                                        |
| 30         | -                                                                                                                               | Hard to tell.                                                |
| 31&32      | -                                                                                                                               | Can't tell:                                                  |
| 34         | -                                                                                                                               | Canals and railroads increase the circle of competition.     |

The attention of the Government is requested to letter No. 4. of James Ronaldson, of which it is impossible to make a short abstract.

## DOCUMENT 13.—No. 11.

PHILADELPHIA, April 14, 1832.

GENTLEMEN: Annexed are answers to some of the queries proposed in your letter of 22d March, which, from a hasty consideration, may be not quite correct; which you will please excuse.

Very respectfully,

Your obedient servant,

WM. WHITAKER,  
R. WHITAKER.M. CAREY,  
C. C. BIDDLE.

Per

## ANSWERS TO QUERIES.

1. Pennsylvania State, Philadelphia county.
2. Cotton; water power.
3. Established in 1817. Individual concern.
4. About forty-five thousand dollars.
5. Raw material \$12,000, wages, &c. 10 to \$12,000.
6. Very fluctuating; sometimes a losing business, &c.
7. Competition, excess of importations, &c.
8. From five to twenty per cent.
9. Until 1824, about ten thousand dollars; since then, twenty to thirty thousand.
10. About 300 bales cotton, American, from 9 to 28 cents; average, 12 cents per pound.
11. From Great Britain.
12. About fifteen men at \$1, twenty young women at 50 cents, and thirty children at 25 cents, per day.
13. From ten to twelve hours per day, all the year.
14. Agriculturists lower; women in New England lower; and in Great Britain half.
15. Keep four horses for factory, and farming about thirty acres.
16. All sent to Philadelphia and New York.
17. Very often. Sometimes to a large extent.
18. All through the country.
19. I believe some were exported to Mexico.
20. Very rarely for cash; generally at six months, and often at eight.
21. Generally decreasing; by raw material, facilities, wages, &c.
22. Say five-quarter sheeting; in 1825 at 18 cents per yard, and in 1830 at 10 cents: yarn No. 18, at 45 to 18.
23. About thirty or forty per cent., so long as capital and labor is fifty to one hundred per cent. higher than in Great Britain.
24. Perhaps a specific cash duty may answer.
25. Very fluctuating; the first year unprofitable, the last about ten per cent.
26. Sometimes sold below cost; when material, and labor, &c., is each half.
27. About 300 bales cotton, and subsistence for upwards of 100 persons: also 100 tons coal, and 20 or 30 barrels flour or starch: iron, wood, oil, &c.
29. In that case should be compelled to abandon the business.
30. Having been brought up to this alone, I cannot at present answer.
- 31 & 32. Cannot answer at present.
33. Answered in part above: about two-thirds.
34. Cannot answer; as, with the present duties, capital does not always yield six per cent.
- 35 & 36. Cannot answer.
37. In our particular branch, suppose three-fourths, or more.
- 38 & 39. Can't answer.
40. For men, \$1 per day; women 40 cents, and children 25 cents per day.

## DOCUMENT 13.—No. 12.

## FRANKFORD BLACK, BLUE, AND FANCY DYE WORKS.

To Messrs. M. CAREY &amp; C. C. BIDDLE.

SIR: I herewith send you a few answers (so far as they are connected with my business) to the queries of your note of the 22d of March last.

## ANSWERS TO QUERIES.

1. In the State of Pennsylvania, county of Philadelphia, township of Oxford, and borough of Frankford.

2. A dying establishment of all kinds of cotton cloth, and cotton and worsted yarns; and steam power.

3. Established in the year 1821, and an individual concern.

4. Capital invested in ground, buildings, and machinery, about \$15,000.

9. Cannot say what has been done since the establishment first began; but, for the last twelve months, have dyed and finished, of different kinds of cotton cloth, one million four hundred and fifty-six thousand yards; besides, or exclusive of a peculiar kind of cloth, which I do nothing to but finish, (mot dye,) which will equal in amount the above. I have also dyed about forty-one thousand six hundred pounds of cotton and worsted yarn during the same time.

10. Foreign articles used last year are as follows:

|             |                   |
|-------------|-------------------|
| 62,442 lbs. | Campeachy logwood |
| 64,401 "    | Cuba fustic       |
| 29,069 "    | Nicaragua wood    |
| 1,300 "     | bar and camwood   |
| 2,910 "     | safflower         |
| 10,186 "    | Bengal indigo     |
| 13,129 "    | Sicily sumac      |
| 1,790 "     | cream tartar      |

Of domestic articles,

|            |                    |
|------------|--------------------|
| 1,595 lbs. | oil vitriol        |
| 2,639 "    | muriatic acid      |
| 465 "      | aqurz fortis       |
| 4,235 "    | alum               |
| 14,420 "   | copperas           |
| 6,522 "    | pot and pearl ash. |

12. Forty-two men, average wages \$1 per day, each; ten boys, average wages \$2 50 cents per week; one woman at 50 cents per day.

13. Labor ten and a half hours per day in summer, and ten in the winter season, and steady employment all the year.

14. As to the rate of wages of similar classes otherwise employed, I cannot say.

15. Four horses, besides hiring my fuel hauled, which costs three hundred and eighty dollars per year. As the 16th to 24th queries relates to sellers of goods, I shall leave them for such to answer.

25. My profits have been annually expended in improvements in the different departments of the establishment.

26. Three hundred barrels of the best white wheat flour per year, eight hundred cords of pine wood per year, one hundred and fifty tons of anthracite coal.

29. If the duty was reduced to 12½ per cent. on the quality of goods which I dye and finish, it would force me to quit my business.

30. As my capital is fixed in buildings, ground, and machinery, for this business alone, I could not turn to any thing else; it would therefore be ruin to me, and an injury to the community.

34. If any reduction on the present duties should take place, it will stop mine and all other similar establishments in this country.

I remain your humble servant,

JEREMIAH HORROCKS.

*April 11, 1832.*

## DOCUMENT 13.—No. 13.

*ASTEN, April 13, 1832,*

GENTLEMEN: Your circular, post marked 26th ult., was received. I did not then consider that any particulars connected with my manufactory, or within my knowledge, could be useful to the honorable Secretary; and as some of the queries appeared to me improper, I did not feel bound to reply; but yesterday I received a communication from Mr. Prevost.

(dated Harrisburg, 3d April,) requesting me to direct to Mr. Biddle a copy of a brief statistical report of the manufactures of this county as taken in the past autumn, and forwarded to the New York Convention. I cheerfully comply with his request, and herewith inclose a copy. I also send replies to your circular queries.

Very respectfully yours,

JOHN P. CROZER.

M. CAREY & C. C. BIDDLE, Esqs.

*Answers to Messrs. Carey and Biddle's Circular.*

1. Delaware county, Pennsylvania.
2. Cotton spinning mill, driven by water:
3. Established in 1825—owned then as now, by J. P. Crozer; original investment about \$15,000, in grounds, buildings, water power, and machinery.
- 4 & 5. The amount of machinery has been increased from year to year; in 1825 about 1,000 spindles, at present near 3,000 do.; consequently no average of materials or amount of wages could be useful; but to take a given year, say from May 16, 1830, to May 14, 1831, the amount of raw cotton consumed was 383 bales, 129,065 lbs., cost \$14,280 41. The wages paid to hands employed in the factory \$5,168 21; wages paid to mechanics in building machinery, including sundry expenses such as freight, carting, oil, leather, and a long list of small items, \$3,757 62.

6 & 7. The annual rate of profits varies much: parts of the years 1829 and '30, competition had entirely destroyed the profits of cotton manufacturers, but towards the close of this period cotton goods and yarns were shipped abroad to some extent, and this assisted to diminish the redundancy; and manufacturers hitherto having directed their attention to a few descriptions of goods only, were gradually led to greater variety, and the business thus gradually revived.

As it respects borrowed capital, it must be evident that no possible difference can exist between the profits on borrowed and other capital after charging interest on each, which should be done before profits can arise; and as to the profits upon other branches, I am unable to determine accurately. The protection extended to paper in 1824, appears to have been adequate. The late introduction of machinery into this branch has given great facility to production; and from the little manual labor now requisite, I believe the trade is quite secure from foreign competition.

The woollen establishments of Delaware county have not languished. An extensive flannel factory appears in a most healthy condition, yet the woollen manufacturers complain much of the injurious effects of the last tariff.

9. Cotton yarn, No 15 to 33.
11. None of similar character imported.
12. Fifteen men, \$7 50 per week; sixteen women, \$2 25 per week; and above twenty children, at one to two dollars per week.
13. Twelve hours per day all the year.
14. In other branches the workers seldom are employed so many hours; mechanics and tradesmen are here paid about the same as above, in proportion to the time they work. The same remark will apply to female labor, as also to the labor of children.
15. Two or three horses employed.
16. There are power looms in the neighborhood which consume part of the yarn; the balance is sold in Philadelphia to hand loom weavers.
17. No foreign competition in yarns.
- 18 & 19. In 1829 some small orders were filled to send to Mexico of yarns No. 22 to 26.
20. Yarns are usually sold at a credit of four months.
21. The cost has decreased, excepting when the raw material had advanced in price; the improvements continually making in machinery has lessened, in a greater or less degree, the cost of spinning in each successive year.
22. In 1821 the usual price of yarns No. 20 was 47 cents per lb., in 1830 the same descriptions were sold regularly at 20 cts. per lb., and at present the price is 25 to 27 cents per lb. The raw material did not vary more than two cents per lb. in these three periods.
23. If foreign cottons were never sold here at a sacrifice, it is confidently believed that no protecting duty would be necessary in coarse cotton fabrics—say all goods made of yarns No. 20, and under. But even the present duties do not always exclude importations of low priced cottons; and at the present time we feel the effects of extensive auction sales of British cottons sold at a price which but little more than pays duties and expenses of importation.

## DOCUMENT 13.—No. 13—Continued.

25. The rate of profits for the last three years, taken together, has been about eight per cent., exclusive of interest charged upon the whole capital, and about two-fifths of this amount has been expended in additions to machinery.

26. The raw material is something less than one-half the value of the yarns I spin; the wages in factory about one-fifth; the current expenses of repairs, oil, out door labor, &c. &c., are about one-tenth; and from the balance is to be deducted the interest of capital, &c.

27. A sufficiency to maintain 105 persons, large and small, using plenty of wholesome food and decent apparel.

29. The foreign yarns and goods which would be sent here and put off at forced sales, would, I have no doubt, compel me to abandon my business.

30. I have not reflected upon this contingency—my capital would undergo a great diminution if the business could not be sustained—the machinery would be of no value.

31. I think there are few pursuits so uninviting as cotton spinning would then become.

The remaining queries I am not fully informed upon, No. 33 excepted, which number I purposely pass over. So far as it concerns myself, I might answer it with safety; and with this assurance I the more freely enter my protest against interrogatories of such a bearing, how respectable soever the authority may be from which they have emanated, especially as I can conceive of no good which could result were replies given on this delicate point by every manufacturer in the country.

With great respect,

Your obedient servant,

JOHN P. CROZER.

M. CAREY, C. C. BIDDLE, Esq.

## DOCUMENT 13.—No. 14.

PHILADELPHIA, March 26, 1832.

GENTLEMEN: The following is respectfully presented to you in reply to your circular of the 22d instant.

Your most obedient,

JAMES RONALDSON.

Messrs. MATHEW CAREY and CLEMENT C. BIDDLE, Esquires.

1. A mill, Delaware county, Middleton township, on Ridley creek, Pennsylvania.
2. Altogether employed in spinning cotton into yarn, and with water power.
3. Established in 1821; a private concern.
4. Real estate, viz. land, houses, water wheel, geerings, &c. about - - \$14,000
- Machinery - - - - - 18,000—32,000
5. At a loss to understand this query; but, for the active capital, from \$4,000 to \$5,000 is required to buy cotton, pay wages, and pay for a variety of articles, such as leather, oil, iron, &c. &c.
6. There is no borrowed money. If half the capital had been borrowed, its interest would have crippled the concern. In 1830, the profit on the whole investment fell short of three per cent.; in 1831, it was ten per cent., and the average is about eight; though my sales are generally cash, there are constantly occurring bad debts.
7. Fluctuation in imports, price of cotton, and an irregularity in demand, caused by the effects of the importation being in excess, or short of the demand, the irregularity of the production and price caused by this, becomes cause, and affects the price beyond the mere period, &c. of the excess or defect.
8. This is a question beyond my capacity to answer.
9. Cotton yarn is the only article made, and it is of a superior quality: this is produced by using very good cotton, and, in place of working the waste into the yarn, it is sold to the citizens at a low price, and employed by them in padding bed covers, &c. &c. Now, this query, correctly answered, is to put the querist and his readers in possession of all the knowledge, minutia, and data, that has been acquired and accumulated in ten or eleven years. The querist asks, in another place, how much material do you use, and how much goods do you produce? From correct answers, he would find 13 per cent. of cotton bought, and not accounted for in goods; the querist would conclude he has made the witness convict himself: the value will average, per annum, \$14,500, and the gain as stated in reply to No. 6.

## DOCUMENT 13.—No. 14—Continued.

10. From 150 to 170 bales New Orleans cotton, oil, leather, &c., gross value \$8,500. Of foreign cotton, I have only used two lots from the island of Margarettia; it proved an excellent long staple, and made strong yarn, and its value had been much injured in consequence of not having been properly ginned or cleaned, and the import duty made it rather too high.

11. I know of no cotton yarn so coarse, and made of such expensive cotton, as that I spin, imported.

12. Men and boys at this moment 10, women and girls 16: we are not partial to employing children, and the proportion will be, men 5, boys 5, women or grown up girls 5, second class 11; average wages of males \$12 per month, females \$8.

13. Working hours throughout the year, say 70 a week, summer and winter nearly the same, that is, 11½ hours a day, and really this is as much as the people should work.

14. Cannot reply to this; only I know that, in consequence of our men losing no time from bad weather, want of jobs, and at fifty cents per day, the old men and youths thrive better than on a farm or at laboring work and job work. Indeed, in this establishment, one family whose father is a mason, and another family whose father is a country carpenter, has been supported by them all last winter: the men were out of employment.

15. A neighboring farmer wagens into Philadelphia all the yarn, and out all the coals, cotton, oil, leather, &c.; and for this receives nearly \$300 per annum.

16. A portion of the yarn is sold to country weavers, and the remainder is sold in Philadelphia, distance 15 miles.

17. Foreign articles of the same kind never were imported into the United States; no foreign spinner employs cotton of the same quality in making such coarse yarn: what I use is that they spin into No. 60 to 80.

18. What yarn is not sold in the country at the mill is wrought into cloth, suspenders, webbing, &c. in Philadelphia.

19. What becomes of the yarn after it is made into cloth, &c. I do not know.

20. The sales are principally for cash, and the remainder on short credits, and on these there are occasionally losses. No barter.

21. There has been a reduction in the price of cotton; the wages remain much the same; some improvements have been made in the manufacturing processes; and, though the decrease of price has been considerable, I have no account of its progress.

22. In 1822, No. 16 was at 40 cents per pound, in 1830, 18, and now is 26 and 27.

23. Very few even amongst merchants are aware of the extent to which expert and skilful workmanship can, in the fabricating of *cotton goods*, be substituted for a good quality of cotton; so in this the British manufacturer is greatly the superior of the American, and the humbled state of the work people in England is so great that their necessities compel them to put forth a degree of care and effort the American laborer will not submit to; this greatly favors the Englishman making goods of a fine appearance out of bad materials. In the next place, the state of laborers in England is such that necessity compels them to live on the least possible quantity of the necessities of life, even during their prime. This fortunately is not the case in the United States. This gives the British manufacturer another advantage; and the paper currency of the United States causeth all their productions to come into market loaded with a higher money price than they would, in the absence of this paper money, have had. All these concur to favor the foreigner; and it appears that it has only been by repeated essays the statesmen of this country have come near to it. Judging by effects, it appears the present duty is sufficient. If all the duties were payable in cash, and the credit system given up, a reduction of four or five per cent. would do no injury to the spinner of yarn.

24. Cash duties should be substituted for the credit system.

25. This is answered in reply to No. 6. The concern is private.

26. This is so variable it is not easy to reply to the question. In 1830, at times, the material and wages cost more than the article sold for; the same was the case in 1825, when cotton rose so high; and in both cases, but for my feeling towards the laborers, the mill would have been stopped.

27. Cotton, the produce of the United States, with the exception of two parcels of Margarettia, which is a fine long stapled cotton, badly cleaned, and that made extraordinary strong yarn. Cotton \$8,500. Leather, oil, nails, iron, &c. &c.

28. Cannot tell.

29. If the duties are reduced to 13½ per cent.—except Congress can persuade us to live on nothing, for our condition would be worse than that of the English ever has been—we would stop, which would be better than working for the consumers at less than cost.

30. If I abandoned my business, I would take the capital to some more favored country as soon as possible.

## DOCUMENT 13.—No. 14—Continued.

31. Usury, shaving notes, speculating on the misfortunes of others, slave dealing, banking, &c.

32. I am not acquainted with the matter referred to in this "leading" question, but perceive a correct understanding of it must be of great importance to speculators and store-keepers, and if I thought it of importance to the statesman, I would try to find out the diameter of the certain circle round Kiskiminetas, &c.

33. The amount of capital is stated in reply to No. 4, and the borrowed is in the ratio of 0 to 32,000.

34. The common rate of interest is six per cent., and, as per reply to No. 6, eight is got; which is two per cent. for personal labor, risk of trade, &c. &c., and the compiler of this query may be capable of calculating the effects of general and special reductions of duty, but I am not; and, as respects reduction, by all means let it be instant, so that the people may not be cheated into their state of poverty. An instant reduction will be understood by every one, and, in a republic like this, every thing, every act, should be fair and honest.

35. I am not merchant enough to understand or answer this.

36, 37, 38, 39. Reply as above.

40. In this query is the compensation of lawyers, doctors, divines, players, members of Congress, senators, presidents, secretaries, governors, &c. &c., as well as ploughmen, manufacturers, laborers, tradesmen, men, women, and girls included. If all these are alluded to, the question is too intricate for the majority of society; and surely the inquisitorial compiler of these surveillance forty queries could not limit them to a pry into the state of the manufacturers. Such a thing would be anti-democratical, anti-republican, and beneath a member of Congress who had a respect for his character as a statesman.

JAMES RONALDSON.

## DOCUMENT 13.—No. 15.

BROWER'S FOUNDRY,

*Philadelphia, April 10, 1832.*

SIR: We would cheerfully lend our aid, by furnishing such answers to the queries which relate to our establishment as would enable you to report such facts as are necessary to a full knowledge of the manufactures of the United States, but would beg you to excuse us from a task which we cannot perform with satisfaction to ourselves, nor benefit to you.

As it was established in 1831, and as yet conducted with no regular and fixed capital, and the quantity of manufactures produced small, we cannot ascertain with any certainty the profit that will arise from the investment, and being unacquainted with the duties on foreign importations of a similar nature, we cannot tell what duties would be necessary to enable us to enter into competition with similar imported articles; consequently we cannot furnish any correct answers to the more important queries. We deem it, therefore, more proper merely to state the quantity, kind, and price, at which we sell our manufactures.

Fifty tons of castings have been manufactured since the commencement.

Railroad wheels, and hollow ware, being our most extensive manufacture, for which we find a home market, at \$70 per ton. Wagon-boxes, machinery, &c., a home market, varying from 90 to \$100 per ton.

We do not wish to be understood to withhold any information that would tend to a fair and proper adjustment of the tariff. We hope such a system will be adopted as will enable us to continue our business to advantage, and tend to the advancement of the public interest.

We are, gentlemen, very respectfully,

Your obedient servants,

BROWER, TEMPLIN & CO.

Messrs. CAREY and BIDDLE.

## DOCUMENT 13.—No. 16.

*PHILADELPHIA, March 30, 1832.*

GENTLEMEN: Agreeably to your request is subjoined a statement of the Globe Mill establishment, located in the district of Kensington, Philadelphia county, State of Pennsylvania, owned by Craige, Holmes and Craige.

## DOCUMENT 13.—No. 16—Continued.

Two steam engines and a water wheel, 45 horse power.  
 Three buildings, built in 1810, 13, and 16, in which there are 47 looms for manufacturing girth web, 9,126 spindles.  
 Numbers of yarn spun from 14 to 20, average 16.  
 Cloth made annually, thirty thousand pounds.  
 Cotton manufactured annually, five hundred and eighteen thousand one hundred and seventy-four pounds.  
 Fifty-two barrels flour used.  
 Coal consumed, fifteen hundred tons.  
 Oil consumed, one thousand gallons.  
 Tallow used, thirty-one hundred and twenty pounds.  
 Capital two hundred thousand dollars.  
 Forty-two males employed, average wages \$8 50 per week.  
 Eighty boys do do 1 37½ do.  
 Seventy-two women do do 2 62½ do.  
 One hundred and ten girls do 1 57½ do.  
 Under 12 years, ten.  
 Apprentices have one quarter's schooling annually.  
 There is used in the manufactory, not enumerated, such as castings, blacksmith work, cards, white lead, nails, files, &c. &c., upwards of eight thousand dollars annually.  
 CRAIGE, HOLMES & CRAIGE.  
 Messrs. M. CARRY & C. C. BIDDLE.

## DOCUMENT 13.—No. 17.

*Morton and Henry Coate's Nail Manufactory.*

| QUESTIONS.                                                                                                                       | ANSWERS.                                                                                                                                  |
|----------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                        | 1. Pennsylvania, Chester county, 25 miles from Philadelphia, on the Schuylkill river.                                                     |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                             | 2. Rolling mills and nail manufactory; water power; eighty horse power employed.                                                          |
| 3. When established; and whether a joint stock concern?                                                                          | 3. Established in 1829. Private.                                                                                                          |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                  | 4. About seventy thousand dollars.                                                                                                        |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                 | 5. Iron and coal about \$62,000; wages about 18,000 dollars per annum.                                                                    |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                          | 7. Profits decreased from competition.                                                                                                    |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?  | 10. Nine hundred tons Pennsylvania bloom iron; 300 tons Virginia and Pennsylvania bituminous coal; 200 tons Anthracite Pennsylvania coal. |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                  | 11. No cut nails imported; number of men employed 60; wages \$1 to \$1 50 per day, piece work. Population supported about 200.            |
| 13. How many hours a day employed? and what portion of the year?                                                                 | 13. Rolling mill runs day and night; nail factory from sun rise to sun set in summer; from sun rise until 8 o'clock in winter.            |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries? | 14. Out doors work 75 cents per day.                                                                                                      |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                      |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------|
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                                                            | 15. One horse and boat of 40 tons employed on the canal.                                                                      |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                                                                  | 16. Nails sold in Pennsylvania and New Orleans.                                                                               |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                                                                 | 20. Sold at 4 and 6 months' credit.                                                                                           |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                                                                | 21. The article has decreased 20 dollars per ton, from the cheaper rate of iron and coal, and improvement of machinery.       |
| 24. Is any change necessary in levying or collecting the duty on such articles, to prevent fraud?                                                                                                                                                                                                                                          | 24. None.                                                                                                                     |
| 25. What has been the rate of your profits annually for the last three years; and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and, therefore, not divided out annually? | 25. Private concern.                                                                                                          |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of the capital?                                                                                                                                                           | 26. Cost of blooms, \$65 per ton; nails \$120 per ton; labor about \$17 to \$20 per ton.                                      |
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                                                                                                                                                                                       | 28. Amount of nails manufactured in the United States estimated at 40,000 tons. Pennsylvania about 7,000 tons.                |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make, were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                                                                   | 29. The business would have to be abandoned, as, at times, the market would be glutted from Europe.                           |
| 32. Are not the manufactures of salt and iron, remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?                                                                                                                                               | 32. The canals and railroads of this State would enable the imported article to be sent to almost every part of the interior. |
| 37. Proportion which the production by the American manufacture bears to the consumption?                                                                                                                                                                                                                                                  | 37. No cut nails imported.                                                                                                    |

PHILADELPHIA, April 14, 1832.

## DOCUMENT 13.—No. 18.

PROVIDENCE, DELAWARE CO., PA., 4th Month 10th, 1832.

**ESTEEMED FRIENDS:** I herewith return the circular you sent to John Bancroft & Son, containing the forty queries put forth by the Secretary of the Treasury, without particular answers to any of them; but think it best, on account of myself and son, to furnish you with the following account of my affairs and views; and which I shall feel obliged if you will put into the hands of the Secretary of the Treasury.

About ten years ago I came to this country, bringing with me a family of twelve children—seven sons and five daughters; all brought up to be very industrious, from the oldest to the youngest; the oldest at the time being twenty years of age, and the youngest seven years old. In Great Britain I rented a large farm, upwards of three hundred acres, under Sir W. W. Wynne, and at the same time was in business extensively otherways with my brother; that for the last eight years we were in England, my capital, notwithstanding the greatest care and industry, kept growing less and less, owing to the heavy burdens we had to bear in the way of poor rates, tithes, and the fluctuation in the prices that grew out of the paper currency and credit system, &c.; and I well know it was the case with thousands, as well as myself; and for the last three years I was there, notwithstanding the corn laws to enable the farmer to pay high rents, tithes, poor rates, &c., I lost more on my farm in the lowness of prices for agricultural produce, and sale of my stock, than would have bought a good farm in this country. That being the case, I thought it best to emigrate, for the future benefit and comfortable settlement of my children, more than for myself; and when we left our native country to come here, I may say we had the general good wishes and prayers of the whole neighborhood for our welfare and comfortable settlement; and many said they did not know a family more suitable to go to America, or more likely to succeed well there. Well, when we arrived here, we intended to go to farming, I having a number of relations farmers (whose forefathers came to this country) settled on farms of their own in Bucks county, Pa., but they all advised us not to go to farming, as being an unprofitable business; but, as my children were very suitable to engage in the manufacturing business, to look out for a suitable situation, and proper person in one of my countrymen, and go into that business, and that we should make better out in that than in the farming business. I did so, and am now, and have been all the time since we came to America, except the first nine months, engaged in manufacturing flannels only, of every description; and as I had one son brought up in the manufacturing business in the heart of the flannel manufacturing district in England, near Rochdale, in Lancashire, we have brought our concern now to be the first in the United States, and our goods, where they are known, are preferred to the imported flannels; four years ago, that is, in 1827, we obtained the medal at the exhibition of the Franklin Institute; and we have now in employ about 120 hands, most of them the best workmen, partly from England: these have come here to escape the oppression of being obliged to work for less than the necessities of life; and as the English corn laws would not let them get a sufficiency of bread, they are come here to earn and to eat it, and they make the American farmer a market at home. Perhaps if the policy of this Government was certain, and not vascillating upon the subject of protection to her own industry and internal improvements, it might be the best for me and my family eventually that we engaged in the way we have done: *but I can with the greatest truth say*, that, had I, or we, engaged in the farming business, and used the same industry as we have in making flannel, we should have made more money in that business than we have done in this. I value the institutions of this country more than many of the present race of Americans, I think, and would be very sorry that either designing individuals at home, or foreign policy abroad, or both united, should weaken or divide the Union, or destroy so good, simple, and cheap a Government. And it does appear very strange to me, that with honest men there should be two opinions what is the right course to pursue. The course that many are now pursuing is exactly such as foreign governments, who would like to see this one destroyed, wish to promote; and many leading men could not act more in favor of foreign policy, if they were really elected in England, and sent by her to promote her interests, and retard the growth of America. The Government of England sees and knows that if this country is wisely governed, she will not only lose her best customer, but that eventually this country will supplant her, and be able to take her place in supplying her other customers; because, though the working class here are well paid, while hers are ground down to subsist on the lowest pittance; yet here, having no expensive establishments to support, and land so cheap, this country would, in a very short time, comparatively speaking, take the place of England in supplying her other customers, and cause, eventually, the employment of American shipping to increase, instead of diminish, as represented in the address drawn up by the late Attorney General at the Free Trade Convention in Philadelphia. She sees this, and consequently will spare no pains to cause a division of the Union, and prevent internal improvements, which would draw the interests of the country together, and which, by a wise policy, would cause this country to grow rapidly in wealth

and resources; and could be done so easily, and never felt as a burden at all to the nation, but would soon be found a source of great wealth, diffusing life and vigor through every part of the nation. There is room here for all the industrious bees from England, who would certainly come to enrich this country if a right policy were pursued. I know many capitalists there have been long looking towards this country, but the uncertain policy pursued by the Government made them waver in their determinations; and some of this description, who have actually come over to judge for themselves before disposing of their concerns, have concluded to remain in England. Many have desired me to write them what the prospects are, being very desirous to come, seeing themselves gradually sinking in England; but I have not felt myself warranted in pressing upon them to come, seeing the difficulties many have to contend with. I see clearly how the wealth and strength of England might be brought here, and to the great benefit and comfort of thousands of her very valuable capitalists and their industrious workmen. How can the American farmer look for an improvement in his business, while so many thousands employed in that business are every year coming from England and other parts of Europe, and adding to that branch of industry, if he do not have his own manufacturers so effectually secured and protected as to find him a certain market at home?

The policy advocated by the south would involve the whole country in ruin, and would not benefit themselves at all. If their situation is bad, it would certainly make it worse. If manufactures are prostrated, I shall not be afraid of getting bread, so long as I am willing to labor; but as I have frequently said to my workmen, when we have been getting improved machinery, and some of them have been afraid of being thrown out of employment, I was obliged to do so, unless they could prevail upon England to lay her improvements aside, or else quit the business altogether, and go to something else myself, as well as them. And in such a case, I could see nothing so certain of supplying us with bread as the farming business, bad as it is or would be; but in that case we should weaken and destroy our comforts without benefitting England in any other way than preventing this nation from becoming her rival; for we certainly in that case should not want, or at least not be able to purchase goods from her, though we might not want bread; and on that account my family, even then, would be better off than thousands in England and Ireland, and we should be better off in that respect than if we had remained in England.

Something in this way appears to me the best answers I can give to the queries proposed; and I conclude by saying, I think it would be a good thing if the Farewell Address of the great Washington, on resigning his Presidency, was read *annually at the opening of every session of Congress*. I shall regret greatly if the extraordinary blessing designed by Providence to mankind in the establishment of so excellent a Government, should be frustrated by wicked men, and which I ardently desire may by some means yet be prevented.

On reading over the preceding, I have concluded that it is proper I should take a more particular notice of the questions the circular puts to me.

The business I am engaged in, viz. the flannel business, in the extensive way I am now in, requires considerable capital more than I have, and it would not be agreeable, indeed it might be imprudent, and certainly humiliating, to state how much I have borrowed. In the next place, correct answers to all the questions is far beyond my knowledge and capacity. With respect to those that especially apply to my own business, correct answers would be of more importance to the English Government than to an American member of Congress. It would make the foreign manufacturer and his government acquainted with the weak points of our situation; and without having any unkind feeling towards my native country, or any other country, still I do not wish to furnish them with that knowledge which might lead to bad consequences to myself and family.

This trade has undergone a surprising revolution within a very short period, every one is it acquiring further knowledge, and no one inclined to communicate his own discoveries and improvements to the others; and some of the processes now in use in the United States are superior to those practised in foreign countries: and it is not desirable to call the attention of foreigners to them, because these foreigners, in the matter of wages, have decidedly an advantage over us, and the improved processes would, if brought into their service, increase the advantages. If a steady policy by Congress is not pursued to support American industry, I had better never have engaged in this business; and if I am obliged to relinquish it, only think of the loss that will ensue in the sale of property of such description, factories, water power, and machinery; for who will buy, or at what prices, if we ourselves cannot make the business answer?

All which I respectfully submit to your and the Secretary of the Treasury's serious consideration, and with the best wishes, not for my own prosperity as an individual particularly, but for the whole United States of this highly favored nation, and that its union may continue to the remotest period of time, I subscribe myself, your very sincere friend,

JOHN BANCROFT.

MATTHEW CAREY and CLARENCE C. BIDDLE.

N. B. As follows is a statement of my establishments, as they will be in operation in a very short time, as some of our machinery is not fully in operation in a large new factory just erected last year.

|                                                                                     |   |   |   |    |     |           |
|-------------------------------------------------------------------------------------|---|---|---|----|-----|-----------|

|                                                                                     |   |   |   |    | —   | Total 350 |

Who consume annually, besides all other agricultural produce, &c. about 375 bbls. of flour.

We have twenty double carding machines, which will card about 5000 lbs. of wool every week. We use all American wool, and which, at the price we paid for wool last year, would amount to the sum of \$156,000 for one year, which all goes to the farmer; our wool last year averaged 60 cents per lb. From past experience, I think myself warranted in saying, that so far as the expense of manufacturing wool into flannel enters into the price, that it will in the course of a few years be less, and still the work people be comfortably fed, as good and industrious people should be.

### DOCUMENT 13.—No. 19.

ANALOMINK FORGE, NEAR STRONDSBURG,

Northampton County, April 3, 1832.

GENTLEMEN: In answer to the circular addressed to us, we hasten to annex the following answers to the queries therein proposed, and which, as far as lies in our power, we have given with candor and fidelity.

Hoping that the information thus elicited may tend to an equitable and permanent adjustment of the tariff, we remain, very respectfully,

HENRY JORDAN & CO.

Messrs. CAREY and BIDDLE.

1. Pennsylvania, Northampton county.
2. Water power; a six fire forge and three hammers; refinery of pig metal.
3. 1829, '30; an individual concern.
4. Thirty-six thousand dollars.
5. Whole amount \$22,000: materials \$12,000, and labor \$10,000.
6. Has not been ascertained—(not over 10 per cent.) on borrowed capital 4 per cent. &c.
7. Domestic competition, cause of decrease.
8. In our county 10 to 12 per cent.
9. \$27,000; bar iron, superior.
10. 450 tons pig metal, valued at \$30 per ton, \$13,500; 100,000 bush. charcoal, at 5 cents per bush. \$5,000—all domestic.
11. Unknown.
12. 75 men, average wages 75 cents per day; subsisting 400 persons.
13. 10 hours during the whole year.
14. In our county similar; in others unknown.
15. 40 horses and mules.
16. At the forge a market for 50 tons; remainder in New York.
17. Best Russia and Swedish; to a large extent.
18. In the vicinity of the forge, in New York city, and Connecticut.
19. Uncertain.
20. Neighboring market, cash; in New York at four months' credit.
21. Rather decreased; from the materials and labor; the establishment too new to say at what rate.
22. Superior quality at \$90 per ton.

23. Thirty per cent.
24. We presume not.
25. Answer as in query 6th. \*
26. Wages 12½ per cent.; raw materials 58; profit on capital 10 per cent.
27. Grain, pork, hay, &c., to amount of \$5000.
28. Unknown.
29. Give it up at once.
30. It would be more than half lost; the lands are valueless, unless for our purposes; and water power here is in no demand.
31. Any other business would be better.
32. We presume so, where the cost of transportation is \$20 per ton.

The remaining questions, we presume, are more applicable to cotton manufacturers. The pig metal is drawn from our furnace in Warren county, New Jersey, about nineteen miles from this place. The charcoal is produced in our immediate vicinity.

### DOCUMENT 13.—No. 20.

*Answers by Wagner & Brother to queries of the Treasury Department, Philadelphia, 17th April, 1832.*

1. At Manayunk, Philadelphia county, State of Pennsylvania.
2. Cotton factory, containing 4900 spindles, moved by water power.
3. Built in 1822; is not a joint stock company.
4. Seventy thousand dollars.
5. Sixty-eight thousand one hundred and twenty-nine dollars.
6. Commenced the business in 1828. From 1828 to 1831, after deducting interest on the capital employed, there was no profit. In 1831 the profit was about five per cent. exclusive of interest.
7. The general prosperity of the country in 1831.
8. Supposed generally to be better than our business.
9. Average about 180,000 lbs. of No. 20 cotton yarn, value \$54,000. During the year 1831, the value of domestic goods manufactured, such as checks, gingham, &c. was 65,625 dollars.
10. Foreign materials used, indigo and dye stuffs, amount \$3,800; domestic materials, 200,000 lbs. cotton, amount \$20,000.
12. 15 men, average wages per week \$7; 65 women and girls, 46 boys, average \$1 50—employed in process of spinning; 268 persons employed in hand loom weaving, and the process of winding, spooling, warping, dyeing, &c., whose wages amount, per annum, to \$27,809.
13. Twelve hours during the year.
14. Not known.
15. One horse.
16. No. Six miles.
17. The fluctuation in price of foreign fabrics affect relatively the kinds made here, and in proportion to such changes.
18. Through the United States, and in South America.
19. Principally to South America, Africa, and China.
20. Cotton yarn is occasionally sold for cash, but most generally on a credit of 4 months; domestic goods on a credit of 6 and 8 months.
21. In the year 1831 rather appreciated; principally in labor.
22. In 1829 and 1830 prices were depressed; they improved in 1831, and are again on the decline, and nearly as low as in 1830.
23. On cotton yarn, not less than the present rate of duty; on the description of goods made by us (average cost 11 cents per yard) might be protected by a less duty in a regular trade, but the present rate of duty is necessary to prevent a glut of foreign manufactures.
24. No; the present mode is judicious.
25. For profit see answer to question 6th. It is a partnership concern.
26. The value of the raw material in our manufactures constitutes 22 per cent.
 

|            |   |   |   |   |    |    |
|------------|---|---|---|---|----|----|
| labor      | - | - | - | - | 56 | do |
| dye stuffs | - | - | - | - | 14 | do |
| profit     | - | - | - | - | 8  | do |

- 27. Uncertain.
- 28. Not known.
- 29. It would cause an abandonment of the business.
- 30. Probably half of the capital would be sunk; the employment of the balance would be uncertain.
- 33. Amount of capital \$55,000; exclusive of investment in buildings, machinery, and land attached to factory; no part borrowed.
- 34. At present the capital employed yields no interest adequate to the amount and risk, and apprehend any reduction of duties whatever would endanger the stability of the business.
- 35. Would vary according to the cost or value of the goods.
- 36. The square yard duty being in our estimation the best, any change would be unfavorable.
- 37, 38, 39, 40. Means of answering not in our power.

## DOCUMENT 13.—No. 21.

*Washington Mills, Philadelphia County, Wistar & Fisher.*

GENTLEMEN: We with pleasure reply to some of your queries, but ask your especial attention to the latter part of our statement.

- 1. Wakefield Mills, Philadelphia county, 5 miles from Philadelphia.
- 2. Woollen manufactory; satinets and cassimere; water power.
- 3. Established in 1810; ourselves only interested.
- 4. 35,000 dollars invested in buildings and water power; 18,000 dollars invested in machinery.
- 5. To answer this question we give an estimate of 1830 and 1831. In 1830 we did full work, wool being at a fair price; in 1831 wool was so high that no woollen concern in the country made interest of money; we stopped our mills to prevent loss, and used but one-third our usual quantity of wool.

1830.

- 35,000 dollars worth of wool, generally mixed merino, washed on back, costing about 35 cents per pound.
- 9,000 dollars in dye stuff, cards, oil, leather, lumber, &c. &c.
- 12,000 dollars in wages.

1831.

- 10,000 dollars worth of wool, costing about 55 cents.
- 3,000 dollars in sundries.
- 4,000 dollars in wages.
- 6. A small part only of the capital borrowed, and the business has not averaged interest of money for several years.
- 7. Profit increased or decreased by excessive fluctuations in the price of wool, and excessive importations of woollen goods.
- 8. Uncertain; no business worse or more fluctuating than the woollen manufacture since we have been engaged in it.
- 9. From 100,000 to 120,000 yards. The value has changed so much in ten years that we can make no average; goods, satinets, worth ten years ago 140 cents per yard, can now be bought for 60 cents.
- 10. From 10,000 to 100,000 lbs. wool.  
Do 500 to 6,000 lbs. cotton twist.  
Little or no foreign products except wool.
- 11. No satinets imported; the English do not understand their manufacture, or they would be imported lower than we could make them, as wool is so much lower with them.
- 12. Men's wages 70 cents to \$1 per day.  
Girls' do 30 do to 50 cents per day.  
Children do 15 do to 30 do do.  
Near three hundred men, women and children, supported by us when in full operation.
- 13. The average 12 hours.
- 14. Wages below the average mechanic wages; lower than the New England wages in many departments, and higher than English wages by 50 to 60 per cent.
- 15. Two horses and one pair oxen.
- 16. Sent to Philadelphia, New York and Baltimore.

17. Foreign articles of different descriptions enter into competition, principally from the high price of wool and labor in our country, compared to prices in England.

18. In this country.

19. Very few if any domestic woollen articles exported, and they never can be till wool is given to the manufacturer bearing some comparison to the prices in foreign countries.

21. The price of the manufactured article is about one-fourth what it was 15 years ago: their cost to the manufacturer has decreased very much, but not in the same proportion.

23. The rate of duty established we believe to be altogether sufficient, provided it is collected without fraud, nay, more than sufficient, provided the duty on coarse wool is reduced. We suggest admitting all wools costing ten cents and under free of duty, and putting all other wools at a duty of ten per cent. below the duty on woollen goods. In this way the cost of low wools for the south will be reduced below what they can be imported for from any country. Some frauds may be committed, but they will be more easily detected than on goods. The farmers may at first complain, but with the present prices of wool and wools a general ruin must ensue to all engaged in either branch of the business. The price of wool to the woollen manufacturer must be lowered, or duties on the imported goods will be vain, as the business in its present state cannot be continued. Make the importation of low wool free of duty; it will fill up a certain quantity, relieve the manufacturer to an extent which no increase of duty ever can accomplish.

We believe that a duty of 40 per cent. on goods with this important change (of admitting low wools free) would be better than 60 per cent. to the manufacturer without it, and more permanently useful to the farmer. Last year wool rose to a price beyond what the manufacturers could pay; importations ensued. There is now no sale, even at a reduction of 30 to 40 per cent.; on finer qualities more.

We know no woollen manufacturer who would not be glad, we believe without exception, to sell out and abandon the business if they could; such changes are equally ruinous to the farmer and manufacturer. Their business is now producing general and universal complaint, and has been many times in ten years as bad as it is now. The tariff of 1828 rather increased than decreased the evil, and a remedy we believe to be utterly hopeless while we do not raise a supply of wool equal to our wants, and while it comes to us 50 to 80 per cent. higher than in Europe. We believe making low wool duty free will tend to pacify all the parties opposed to the tariff, and be of the most essential benefit to the manufacturer and farmer of the middle States, and at once reduce the price of negro clothing, and wools for the working men of the country, below what they can be furnished by any nation in the world, and below any price that ever was heard of in this country, for an article made of wool.

We are, very respectfully, yours, &c.

WISTAR & FISHER.

WAKEFIELD MILLS, April 2, 1832.

To MATHEW CARRY, and

CLEMENT C. BIDDLE, Esquires.

## DOCUMENT 13.—No. 22.

NEW HORN, March, 1832.

GENTLEMEN: In compliance with the request contained in your circular of 22d instant, we hasten to reply to the queries therein to the extent of our ability.

We are, very respectfully,

Your obedient servants,

W. P. JENKS & Co.

Messrs. MATHEW CARRY and }  
CLEMENT C. BIDDLE, } Philadelphia.

## ANSWERS TO QUERIES.

1. Bucks county, Pennsylvania.
2. Cotton yarn; water power.
3. Established in 1824.
4. Building and water power, \$25,000; machinery, \$30,000.
5. 33,000 dollars.
7. Decrease of importations in 1829 and 1830.
8. Unknown.

9. 180,000 lbs. yarn, Nos. 18 to 20, averaging 23 cents per lb.
10. 200,000 lbs. cotton; \$21,000.
12. 17 men, averaging \$6 50; 16 women, averaging \$2; 30 boys, averaging \$1 25; 17 girls, averaging \$1 per week; all finding themselves.
13. 11½ hours per day the year through.
14. Men and women about the same rates. Children generally unemployed.
15. None at manufactory, 6 in transportation of yarn, &c.
16. Market at Philadelphia; 32 miles.
17. Little foreign competition in the article of yarn, (but goods.)
18. Principally in Philadelphia.
19. Small exportations to South America and East Indies.
20. Sales at average credit of 90 days.
21. No variation in materials or labor.
22. See No. 9.
23. The present rates are considered a protection.
25. Not exceeding 7 per cent.
26. Cotton one-half; wages 7-16ths; profits 1-16th.
27. Agricultural \$21,000. Other domestic 2,000.
28. Unknown.
29. A reduction of duty to 12½ per cent. would doubtless cause a suspension of manufacture, in consequence of the depression in prices consequent upon the flood of foreign importations which would ensue.
30. }
31. } Unknown.
32. }

## DOCUMENT 13.—No. 23.

OLD SABLE WORKS, DELAWARE COUNTY, March 31, 1832.

Messrs. MATHEW CAREY and C. C. BIDDLE:

GENTLEMEN: Your circular of the 22d instant came duly to hand, and, at your request, shall endeavor to answer some of the queries therein contained.

## ANSWERS TO QUERIES.

1. Delaware county, Pennsylvania.
2. Rolling and slitting mill, and nail factory; water power; also a weaving mill, which I rent to Lewis Phillips & Co.
3. Established in 1809; at present held by the subscriber alone.
4. Sixty thousand dollars.
5. 400 tons bar iron at \$80, is \$32,000; wages \$7,800 per annum.
6. Average clear profit about 8 per cent. in whole amount invested.
7. The profit is less than it should be, in such expensive works, power and attention required, owing to domestic competition.
8. Believe in most manufactures more than above stated.
9. Commencing in 1810 at about 100 tons, and now 400 tons nails per annum. Price in 1810, 10 cents; at present, 6 cents per lb.
10. 400 tons bar iron, mostly foreign previous to 1828. The last three years almost wholly American iron.
11. For the last three years, the price of American iron has been less than Russia or Swedish, English iron not answering the purpose for nails.
12. 26 men employed; average \$1 per day. Their families dependant.
13. 12 hours, including time for meals; constant employ.
14. Wages on a farm something less, except in harvest; but at other manufacturing employments about the same as above stated.
15. Seven horses.
16. The surrounding neighborhood is generally supplied with nails from my factory; the balance sold in Philadelphia or United States.
17. No foreign competition.
18. Principally in the United States.
19. A small proportion of nails exported to South America and the West Indies, British Isles excepted.

20. Sold at six months' credit, or bartered for iron or coal.

21. The cost of the article of nails has decreased, owing to experience in the business, improvement in machinery, and use of Anthracite coal. The quality of nails has also improved. They must, however, always bear a proportionate price to iron in another shape, the bloom or bar.

22. In 1810 nails were 10 cents; since then have been 5½, and now six cts. per pound.

23. The present duty is ample; perhaps a reduction of 20 per cent. would not injure the American manufactories.

24. Not any on the article of nails.

25. For the last three years the nailing business has been exceedingly depressed, and afforded little or no profit, with the exception of the last six months, it somewhat revived, but is again declining, owing to home competition.

26. Raw material (bar iron) costs about 4-6th; labor 1-6th, and incidental expenses 1-12th of the manufactured article.

27. About 3-4th of the whole amount of wages, say \$6,000, in agricultural and domestic productions.

29. It is apparent that at present our nail establishments could not be sustained, protected only by a duty of 12½ per ct. Suppose, for instance, (which I believe would be fact rather than supposition,) that foreign bar iron in Sweden, Russia, or England, cost £ 10 10 st'g per ton at par of exchange

|                                         |         |
|-----------------------------------------|---------|
|                                         | \$46 67 |
| Freight                                 | 6 00    |
| Commission, insurance, &c. 2½ per cent. | 1 17    |
| 12½ per cent. duty                      | 5 83    |

\$59 67

cost of a ton of bar iron when landed in the United States; a price too low for the American manufacturer, until we shall have entered more extensively into the business; and, if foreign competition would procure the manufacture of bar iron, it would, consequently, have the same effect on nails and iron in all its different shapes. But if the present duty on bar, bolt, hoop, and sheet iron, rods and nails, be continued (with some modification if you please) until capitalists and enterprising men, and of such there are many, feeling a confidence in the permanence and protection of the laws and Government, shall have embarked in the iron business, one of the greatest fields for capital that our country offers, and the production equal to the consumption of the United States: Then, perhaps, (and the time is not far distant,) a reduction of duty even to 12½ per cent. on iron, would enable the American manufacturer to meet foreign competition. Why does England produce iron cheaper than the United States? Not because we lack materials, skill, enterprise, or capital—is it not their immense establishments located to embrace all advantages; where iron is converted into almost any shape on the spot, and one transportation, by railroad or canal takes the article to market? How different in the United States or Pennsylvania at present? The ore is smelted at one place, the pigs transported 20 or 40 miles to a forge by team, there made into bar iron, and the expense of a second carting of perhaps as many more miles at equal expense, to a market, is incurred. The two transportations increases the cost of the iron to nearly the present duty of \$22 40 per ton. Anthracite coal will, no doubt, be employed in the manufacture of iron. A company is already incorporated by our Legislature to effect this great object. If successful, of which I have no doubt, with a suitable location, combining the advantages of ore, fuel, and a canal or railroad transportation, will shortly enable our countrymen to offer the indispensable article of iron as cheap and as good as any other nation. I have thrown together these crude ideas on a subject of great importance, and on which much might be said.

Very respectfully, yours,

HENRY MOORE.

# DOCUMENT 13.—No. 24.

CHESTER CREEK, March 28, 1832.

GENTLEMEN: Although we believe that some of the queries proposed in the letter which we have received from you, are very improper, inasmuch as they have a direct tendency to expose to public view a person's private affairs; and further, it is easily discovered they have proceeded from a source unfriendly to the manufacturers' interest; yet we hasten to answer them, in consideration of their being sent you, gentlemen, who are well known to have been the long tried friends of our country's best interest. We would, therefore, deem it highly improper to pass by your communication without noticing it. But we would wish to

mention a few thoughts that crossed our minds whilst reading these queries that have emanated from the Treasury Department. If we can gather any thing from the apparent bearing of them, the design is, first, to ascertain the least possible profit the manufacturer can, by any means, carry on with. Secondly, to find out the least possible wages the working class can live upon; and thus by measuring out and dividing a bare subsistence to each class connected with manufacturing, the protective duties could be lowered; the system of tyranny that disgraces the factories in England could be introduced; children would have to do the work that young women does now; young women would have to do the work that men does now; and bye and bye petitions would be carried into Congress (similar to the one Mr. Sadler took into the House of Commons a few months ago) "stating the cruelties practised on children in the factories." Gentlemen, the tariff cannot be lowered, unless the working class is reduced to the same state of degradation, poverty, and wretchedness, as they are in England; then, and only then, can the American manufacturer enter into the lists of competition with his foreign rival, or else there can be no manufacturing establishment carried on. Reduce the tariff, and at once you stop every cotton manufactory in our State. The business, with all the protection it has got, is very low at present. Several mills are stopped. Manufacturers find it hard enough to enter into competition, (favored as they are by the existing tariff) against all the unfair plans and schemes that surrounds the foreign manufacturer. Certainly, gentlemen, no individual can think of reducing the tariff, unless he associates with the same idea the loss of so much labor, which, by law, belongs to the operative part of the community, as much theirs as real or personal property would be. Reduce the tariff and unfurl the banner of "free trade," and then we'll have a beggared starving population, without a sufficiency to procure the necessaries of existence; and then we may lay on poor rates, build poor houses, erect penitentiaries, get an armed police, additional constables—standing army—erect gallowses, &c.; all this will follow in the train of the contemplated reductions in the protection of American industry. The spirit of every noble-minded citizen revolts at the idea of sacrificing our working population to the idol of foreign policy, or taking the bread out of the mouths of their children, and giving it to the supporters and menials of aristocratic tyranny. Gentlemen, you'll pardon us for obtruding these remarks upon your time.

With much deference, we respectfully remain your obedient servants,

SAMUEL & JAMES RIDDLE.

To Messrs. MATHEW CAREY, }  
CLEMENT C. BIDDLE. }

#### ANSWERS TO QUERIES.

Query 1st. State of Pennsylvania, Delaware county.

2d. A cotton spinning mill—individual property—water power.

3d. The factory was built and put in operation in the year of our Lord 1831.

4th. Capital invested in water power, \$7,000, buildings, \$10,000, machinery, \$16,000.

5th. It requires about \$40,000 in all to carry on the establishment.

6th. The machinery is owned by us; we rent the mill for \$1,000 per year. Any person acquainted with manufacturing knows that there can be no satisfactory answer given to this question. Sometimes the manufacturer carries on for 6 months, and makes nothing over the expenses of his establishment; other times he makes out better. Some years he does nothing like making a fair profit; other years he does better. The standard might be from 12 to 15 per ct. in the money for machinery invested. We have been manufacturing for three years. Cotton manufacturing is a very uncertain business.

7th. Large importations of foreign goods consigned to commission merchants upon very liberal advances, are made; these are afterwards sold at auction for what they'll bring, which always has a tendency to break the prices of the regular manufacturer, reduce his profits, &c.

8th. From 10 to 12 and 15 per cent.

10th. Quantity of cotton that we'll use per annum, will be about 180,000 lbs. at 10 to 10½ cents per lb.

12th. We work 12 hours each day, constantly, the year round.

13th. 16 men, from 8 to 10 dollars per week; 20 young women, 2 dollars per week, and fourteen 4 to 5 dollars per month.

14th. Nearly the same amongst other trades people.

15th. It will employ a team to do the hauling, 4 or 5 horses.

16th. Partly here and partly at Philadelphia, 19 miles distant.

17th. Our yarn being coarse, there is not much competition; but let me remark, that, to spin fine yarn is by far the most profitable; this the English manufacturer does for us. Our protective duties does not enable us to meet them in the market in fine fabrics. We have to spin and weave the coarse and less profitable article, while they reap the advantage of the finer.

18th. In the United States.

19th. None of it are exported.

20th. Cash and credit.

21st. These three years wages have kept the same. Cotton is as high as it was three years ago.

22d. 26, 25, 24, and 23 cents per pound, same description of yarn.

23d. Nothing less than the existing tariff, and an additional protection of 15 per cent., to enable us to manufacture finer fabrics.

24th. It is believed that both the woollen and cotton manufacturer suffers considerably by an illicit kind of trafficking carried on along the Canada lines, and from the British West India islands, as well as from the frauds practised in rating the goods shipped at a lower price than what they were bought for. In vain will any alteration be made in levying or collecting taxes while these evils exist.

25th. We have not been a going here that length of time.

26th. In spinning a hundred pounds of cotton yarn, No. 15, it will take 120 lbs. of cotton,  
 at 10½ cents      12 60      100 lbs. cotton yarn, No. 15, at 23 cents,      23 00  
 Labor              8 00      Expenses                                      21 00  
 Expenses              40

\$ 21.00

\$ 2.00 to pay

the proprietor for his superintendence, hauling, storage, commission, insurance, &c.

27th. About 120 barrels of flour will be consumed in the year, and other articles. There will be about \$ 500 expended monthly, in purchasing food, clothing, and sundries. All the agricultural and domestic production of our country, (tea and coffee excepted.)

28th. Don't know.

29th. Most assuredly it would not only cause but force me to abandon my machinery, which would be valueless, as well as my business. Who would take the lease of my mill off my hands? Who would pay a \$ 1,000 a year for a place that had to be abandoned? Who would consume the farmers' productions, &c.?

30th. What capital would we have to employ in another business, when it is invested in machinery, water power, buildings, &c.? These would be rendered valueless at once. Capital as well as business would be destroyed, and every individual who owned machinery would be ruined. They might take them to England, and try to sell them there, for they would be of no value in America; or, I might say rather in the free States; perhaps the experiment might be tried to work them with the slave population, in order to keep pace with the improvements of England in cheapening labor and grinding the faces of the poor.

31st. If we were forced to abandon our business, and consequently our establishments, although there is many businesses as profitable as ours at present, how could we engage in any? We might go with the Indians beyond the Mississippi.

32d, 33d, 34th. Odd queries.

35th. Much better to have the duty assessed upon the actual value of the article in the American port; it will prevent many frauds that are practised under the present system, to the great detriment of domestic industry.

### DOCUMENT 13.—No. 25.

*Joanna Furnace, Berks County, State of Pennsylvania, April 10th, 1832.*

*JOANNA FURNACE, April 10th, 1832.*

GENTLEMEN: Your favor of the 21st of March was not received until a few days since, owing to its having been sent to Reading instead of this place. I herewith enclose to you my answer to some of the interrogatories propounded by you; and I regret that the time allowed to procure the information you seek to obtain, is so short that it will prevent my replying to some queries to which you have called my attention. In Berks county there are ten blast furnaces, three cupolas, twenty-seven forges, and three tilt hammers. I have in my possession returns from several of the iron-works in this county, made by the owners and occupants, which I believe to be correct so far as they go. These returns I forward to you, from which you will be enabled to form some idea of the extent and importance of the iron business in Berks county. As to my views respecting a repeal or modification of the duty on foreign iron, I refer you to my answer to question No. 23. I however, would here observe, that I have, for sometime past, endeavored to obtain correct information as to the expense of manufacturing iron at the different works in this section of country, and

I am, respectfully,

Yours, &c.,

**WM. DARLING,**

**M. CAREY, Esq.,  
C. C. BIDDLE, Esq.**

## ANSWERS TO QUESTIONS.

- Digitized by Google

## DOCUMENT 13.—No. 26.

*Victoria Forge, Dauphin County, State of Pennsylvania, April 12, 1832.*

## ANSWERS TO QUESTIONS.

1. Pennsylvania, Dauphin county. Victoria forges.
2. Iron; (2 forges;) water power.
3. Put up in 1829-'30.
4. \$48,000.
6. \$3,000 per annum.
7. Introduction of iron under the denomination of old iron, scrap iron, cause of decrease in the profits.
8. Not known by me.
9. About 200 ton of bar iron.
10. 300 tons of domestic pig metal, value \$9,500.
11. Not known by me.
12. 60 men; average wages per month, \$20 each.
13. From 6 to 10 hours the year round.
14. Not known by me.
15. 30 or 40 mules and horses, and 10 oxen.
16. The iron is sent to Philadelphia and Baltimore, where it is sold.
17. The English, Swedish, and Russian iron sell there in competition; but to our great disadvantage when smuggled as old iron, &c., &c.
18. Chiefly in the cities abovementioned.
19. Not exported.
20. Sold at 6 months' credit.
21. The cost of the manufactured article, in the labor, has increased 15 per cent.
22. Average price \$82 per ton.
23. The present duty, and preventing importation of old iron free of duty.
24. To guard against the importation of old iron used for many purposes.
25. No profits; or, if any, very trifling.
27. 3,000 bushels of rye, 1,200 bushels of oats, and 900 bushels of wheat.
29. We would have to abandon the business.
30. It is hard to tell.
31. I do not know.
32. No. The canal and railroad communication increases the facilities of getting the articles from the large cities or sea ports.

**LETTER**  
**FROM THE SECRETARY OF THE TREASURY,**

*Transmitting further returns relating to Manufactures.*

(WESTERN DISTRICT OF PENNSYLVANIA.)

---

**DOCUMENT 14.—No. 1.**

TREASURY DEPARTMENT, June 1, 1832.

SIR: I have the honor to transmit further returns relating to manufactures, received this day at the department, from the agents employed in the Western District of Pennsylvania.

I am, respectfully,

Your obedient servant,

LOUIS McLANE,

*Secy of the Treasury.*

Hon. the SPEAKER of the  
House of Representatives, U. S.

---

**DOCUMENT 14.—No. 2.**

*Report on Domestic Manufactures in the Western District of Pennsylvania, May 26, 1832.*

PITTSBURGH, PENNSYLVANIA, May 21, 1832.

SIR: The time necessary for performing the duties assigned to us by your instructions, has delayed our statement and report much longer than we could have desired; and the information which we are now enabled to communicate is less precise, in some of its details, than it probably would have been if the object of our inquiries had been more perfectly understood by all to whom they were addressed.

The district within which our services were required embraces thirty-three counties, in almost every one of which the business of manufacturing is carried on to a greater or less extent. The manufacturers, in many instances, appeared to be surprised by the terms of the interrogatories submitted to them, supposing them to evince a disposition unfriendly to their interests; and we were not always successful in allaying this suspicion. A number of them declined furnishing the information required; and the actual condition of their establishments and business have been ascertained, as far as practicable, by comparing them with others of a similar kind and magnitude, and by the reports of persons being in the neighborhood.

The returns made by manufacturers in the leading branches, will give you a general idea of their condition, the prospects of their business, and the influence exerted by this department of industry upon the agricultural, as well as mechanical, labor of the country.

In conformity with your instructions, we shall now proceed to make a few suggestions which appear to us to be very material in considering the provisions of a new tariff.

We understand it to be your desire so to shape and adjust it as to afford a reasonable and fair protection to manufacturers, and, at the same time, to remove as far as practicable any burden, whether real or imaginary, which our present system imposes upon other classes of the community.

In regard to the district in which our observations have been made, the agricultural classes are fully satisfied with the present system; they are firm in the belief that it is just as beneficial to them as to those who are engaged in manufacturing. This opinion is universal. It is founded on the experience of the country, and we entirely concur in it. While, therefore, a modification of the tariff is expected which will lessen the revenue derived from imposts, it is earnestly desired by all, as well the agriculturist as those to whom your inquiries have been addressed, that the measure of protection should not be diminished. We think with some of the manufacturers, that the progressive improvements in their process

es, skill and economy, will enable them in the course of a few years to withstand foreign rivalry, under a scale of duties much lower than the present. But it is obvious that the march of improvement cannot be calculated with any precision beforehand, nor a scale of duties graduated by discoveries to be made. It is equally certain that improvements of every sort, in manufacturing, have an immediate effect in reducing prices, and that their full benefit will be enjoyed by the consumer, without any change in the duties. These considerations will justify us in confining our views to the present actual condition of the great interests in question, its prospective advantages, so far as they may be clearly foreseen, and the kind and degree of protection which it needs.

We have adverted to the general opinion as to the measure of protection *now* afforded. Our opinion is, that, in regard to the *ad valorem* duties, an equal protection might be secured by a scale of duties much lower than the present, provided the revenue laws could be so modified as to abolish the system of credits, and provide for an assessment of the duties upon a valuation in our own ports. All the reasons formerly urged in favor of custom-house credits are now refuted by the actual condition of our foreign trade. The importation of *ad valorem* articles, which constitute by far the greatest portion of supplies from abroad, is in the hands of foreign merchants.

The supply of the country bears no steady relation to its wants: it is mainly regulated by the quantity of goods on hands, from time to time, in Great Britain. The trade in question is a business of speculation and adventure, uninfluenced by any feelings of duty to an American Government; setting at defiance all the laws of personal reputation, and frequently covering the grossest frauds. The consequences resulting from this state of things, are such as to make almost every measure of duties inadequate.

Foreign goods are sold at auction sometimes for prices enormously high, and then at less than their cost. The same day—even the same hour—may witness the greatest fluctuation in prices. Buyers are often kept in ignorance of the true condition of the market; are imposed on by the artful suggestions of scarcity; they purchase at high prices in the beginning of a sale, which, before it closes, brings to light the fact that the quantity of goods in market is enormous, and the auction winds up with sacrifices incident to an over-supply.

In regard to auction sales, it has been justly said that the mystery which hangs over all their operations, and the artifices practised for managing the competition of buyers, show that they have more of the characteristics of gambling than of regular trade. They are, in a word, *a foreign concern*. They contribute essentially to fluctuations in the market, and are a principal cause of the uncertainty which baffles the wisest calculations, and prostrates the best directed enterprise of manufacturers as well as merchants.

The bill lately framed by you contains a most judicious and excellent provision in relation to sales at auction. We take the liberty of recommending that it be extended so as to embrace sales of cotton goods and cutlery, and indeed all *ad valorem* articles, the supply of which is wholly or in part in the hands of foreign merchants. We also take the liberty of recommending the abolition of credits in all cases of imported manufactures. As already observed, the actual condition of our trade shows that the reasons for their continuance have, in a great measure, ceased. They appear to us to promise no advantage which recommend a submission to the many evils incident to their continuance.

Reading at a distance from the seaboard, and not being minutely versed in the practices of the custom-house, a suggestion from us in relation to the mode of assessing the *ad valorem* duties may be deemed presumptuous: it appears, however, to be justified by the tenor and scope of your instructions, and if it shall produce no good, it can do no harm.

The bill just referred to proposes, not to fix the value of the goods by the invoice of the importer, but to look beyond it, to their *actual value* in the country whence imported. The 8th section declares, "That in all cases where the duty which now is, or hereafter may be, imposed on any goods, wares, or merchandise, imported into the United States, shall by law be regulated by, or be directed to be estimated or levied upon the value of the square yard, or of any other quantity or parcel thereof; and in all cases where there is or shall be imposed any *ad valorem* rate of duty on any goods, wares, or merchandise, imported into the United States, it shall be the duty of the collector within whose district the same shall be imported or entered, to cause the actual value thereof at the time purchased and place from which the same shall have been imported into the United States, to be ascertained, estimated and ascertained, and the number of such yards, parcels, or quantities, and such actual value of every of them, as the case may require; and it shall in every such case be the duty of the appraisers of the United States, and every of them, and of every other person who shall act as such appraiser, by all the reasonable ways or means in his or their power, to ascertain, estimate and appraise the true and actual value, any invoice or affidavit thereto to the contrary notwithstanding, of the said goods, wares, and merchandise, at the time purchased, and place from whence the same shall have been imported into the United States, and the number of such yards, parcels, or quantities, and such actual value of every of them, as the case may require."

The enactment here proposed contains a wise and necessary precaution against those fraudulent evasions of our revenue laws, which have been a subject of so much complaint. But still the security intended will become effectual only by an assiduous and careful execution of the laws in every particular of its requirements. Assuming this to be the course required and expected by the Government, it should seem that the expense and trouble incident to a valuation in our own ports cannot be greater, nor as great, as those incident to the perfect execution of the enactment proposed in the bill abovementioned. The difference appears to be in favor of a home valuation, the greater certainty to be attained by it, and the general confidence in its results, seem to give it a just preference over any estimate of foreign values or prices, however carefully made. It may be further remarked, that, in making such estimates, the invoices, with their vouchers, will, in practice, be resorted to in the first instance, and a variance of five or even ten per cent. from the actual value of the goods "in the country whence exported," might not readily be discovered; and where, if suspected, the means of detection may not be immediately at hand.

In determining foreign values, foreign merchants must still have the advantage. This appears sufficiently obvious in theory, and it has the confirmation of experience.

Taxing the value of an article in a foreign country, will be, in most instances, in principle, a departure from the mode of assessing taxes which obtains universally under the State Governments. When taxes are laid on real or personal property, no inquiry is ever made as to the price paid for either, or as to their value respectively at some former period. The inquiry is confined to the actual value at the time when the tax is assessed. A variation from this rule must not only involve a liability to mistakes, but it is itself a powerful temptation to imposture, and may excite to fraudulent practices, against which the watchfulness of Government will sometimes be exerted in vain.

The subject of auction sales, of the abolition of custom-house credits, and of assessing ad valorem duties upon a valuation in our own ports of entry, have engaged public attention for several years. Our opinion upon these subjects may deserve but little regard, and they would have been withheld, if they had been less forcibly recommended by the general sentiment. That sentiment pervades the whole community; and, in expressing our own views, we have but represented the convictions, the wishes, and the hopes of the manufacturers, farmers, mechanics, merchants, and all other descriptions of men in the numerous counties which we have visited. This must be our apology for fatiguing your attention with reasons which have no doubt been weighed by you already. We will merely add, in reference to these subjects, that the present system certainly contributes in some degree, and we think mainly, to those sudden fluctuations in the markets which are so frequent in our country, and so ruinous to manufacturers. Their best security is in the *stability* of the market, their worst evil its fluctuations. We confidently believe that if auctions were guarded against frauds, custom-house credits abolished, and the duties levied on the appraised value of goods in the port of importation, a much lower rate of duties than the present would suffice—would be, in practice, a protection not inferior to that now given: because, under such a system, importations would return to the hands of American merchants; the supply would be predicated to the demand; duties would be equally and certainly collected; and the stability of prices would not be continually disturbed by the spirit of reckless adventure and speculation which now presides in our markets.

What rate of duties would be sufficient, under the plan here suggested, we will not presume to say. We think that, in some instances, it would justify a reduction of ten per cent.

The means used by the Treasury Department for obtaining information preparatory to a remodeling of the tariff, indicate the caution which is felt to be necessary in framing a system which must affect so many valuable interests. Of Pennsylvania it may be truly said, that the prosperity of every branch of business is so interwoven with that of the manufacturing community, that if, by any error in legislation, the latter should be crippled, the former must suffer in nearly an equal degree.

Even our public works, now advanced near the point of completion, at an expense of many millions, were recommended principally by the exigencies of a domestic trade, arising from the growth of a vast manufacturing interest in this and some of our sister States. The amount of exchanges made necessary and advantageous by the great diversity of American labor, stimulated as it is in every department by our protective system, is almost beyond the reach of calculation. The stupendous commercial highways constructed by Pennsylvania for the purpose of giving facilities to these exchanges, are themselves the offspring of the protective system, and their value must depend essentially upon its preservation. The best, and almost the only market for the agricultural productions of Pennsylvania, is found in this and the other States, where manufacturing labor is guarded by the protective system.

The same may be said of Ohio, and indeed of all the grain-growing States. Any change which shall much depress and discourage manufacturing, must have an immediate effect upon this market; must, consequently, lessen the value of land, the value of labor, and the comforts of the laboring classes. The hope that the loss of a home market will be made

up by some new and equally valuable market abroad, for the flour, beef, bacon, wool, &c., now consumed in the manufacturing States, is too distant and fallacious to be for a moment relied on. No one can specify such a market. And it is certain that the depression, or even the destruction of our manufactories, would not materially increase our exports of either of the articles above mentioned. The farmer must therefore suffer, in proportion as manufacturing shall be circumscribed or superseded under the operation of a tariff. This we consider as absolutely certain.

It is a common remark, that by heavy duties the poor are made to bear the oppression of high prices. In our opinion, the laboring poor are the persons who have a deeper interest in the protective system than any other class of men. The only commodity which they can bring into market is their labor; by expanding and securing this market, their advantage is certain. Indeed we regard the tariff as a plan for the *protection of American labor*; that it bears with equal favor upon those who work in the field and in the manufactory; that it is peculiarly and emphatically a system for the laboring classes. The period of the greatest suffering ever experienced by the poor in this region of country, was that in which flour was a dollar to a dollar and seventy-five cents a barrel, and other subsistence in proportion. Instances occurred, and are now remembered, where healthy and active laborers worked in the field for no other reward than their victuals, and when journeymen mechanics served for several weeks in succession upon the same terms. Poor parents could not educate nor decently clothe their children: even those who owned and cultivated good farms, and were clear of debt, could only sustain themselves by a narrow economy; and among their unavoidable retrenchments was often found that of the education of their children. The condition of the country here referred to, presented the appalling spectacle of a population, a great proportion of which had no regular employment, and money was therefore dear and labor cheap. The man who had money, and the inclination to use it to the best advantage, was able to speculate upon the general distress; a distress arising from the want of a market for home industry. He was nearly twice as rich, comparatively, as he would have been if a fair market existed for the production of labor, or the country had yielded to labor itself its just and adequate return. It was a season of low prices, and of general poverty. Not merely were the products of agricultural, and, generally, of other labor, very low in price, but the aggregate produce of all the labor of the country was less, by nearly one-half in proportion to the population, than it now is; a fact which places in strong relief the fallacy of the idea which would connect the comforts of the people, generally, with low prices. By providing a market for labor, the Government is elevating the laboring classes to their proper level in the commonwealth. By depressing this market, it heightens, and that most oppressively, the inequality subsisting between those who live upon their money, and those who live by their labor: the one is made richer, the other is made poorer. The truth of this observation has not only the demonstration of actual experience, but it is continually verified by the opposite and clashing needs of the two classes in question.

Men who live upon and speculate with their money, are generally hostile to the protection of the natural labor, and are strenuous for reducing its price; while those who live by labor, or whose capital is directly employed in putting labor in motion, claim that it shall be protected. The theory of the first assigns a large measure of oppression to the laboring classes: under the existing system, the experience of the latter class rejects the sympathy so liberally tendered; denies its application, if not its sincerity; and insists on the reality of the blessings diffused through all their ranks by the protective system.

But although a market is now opened for the labor of the country, we are confident that the prices of its manufactured goods have been gradually falling since 1824; and, in regard to those articles which receive the largest protection, they do not much exceed the amount of the duties. The reason why low prices consists with the prosperity of the manufacturing community, is, that their capital is turned often, and constantly, and their market secured from the desultory rivalry of foreign countries.

There are two ways for lowering the American manufactures: one is by affording greater encouragement to the importation of foreign fabrics. But the benefit which this mode promises will be in an exact ratio to the injury done to our own manufacturers, and the benefit itself will vanish almost immediately; for the home production will be lessened, perhaps be discontinued; and then there will be an end to low prices. The mischief to every department of labor, inseparable from this plan, is too obvious to need any specification. The other mode of lowering the prices of American manufactures is, by encouraging the investment of capital, and the application of home labor in their production: it has never yet failed of its full effect, and it never can; it is fraught with blessings to the industrious classes; it is, moreover, connected with the national security and the national glory. This is the plan which we would most earnestly but respectfully recommend for insuring the permanent reduction of prices. Independent of its advantages in this respect, it is, in its operation, the most solid and palpable benefit ever conferred by Government upon the humble and less fortunate ranks of the American *people*. So closely is it blended with the

prosperity of Pennsylvania, that any considerable relaxation of the present system would inflict upon this State a heavy calamity.

Our tabular statement will apprise you of the amount of capital employed in some of the great branches of manufacturing in this district. Three millions two hundred thousand dollars are invested in iron works alone. Our researches have been necessarily limited to the more prominent branches, but the results obtained are such as to convince every one of the deep stakes which the people of this State must have in the preservation of a system of protection.

Without again adverting to our market for subsistence, and its relation to the interest immediately in question, we have thought proper to notice a subject not within the literal scope of our instructions, but which forcibly appeals to the consideration of Government.

Within a few years past great attention has been paid by our farmers to the raising of an improved breed of sheep. There are probably in western Pennsylvania, at this time, not less than 300,000; and the flocks are rapidly enlarging. By impairing the home market for wool, our enterprising farmers would suffer ruinous losses, and a general gloom overspread the whole agricultural community. The present ratio of multiplication is such, that, in a very short period, the supply of wool at home, for the entire consumption of the country, is certain, and the market must be overstocked with the article. If any case can be presented in which the influence of domestic competition upon prices will be speedily decisive, it is furnished by that of American wool.

During the last war, the freehold of Pennsylvania was valued by the appraisers of the General Government at three hundred and forty-three millions of dollars. It is now worth much more. The amount of personal estate, including our sheep and other property not freehold, whose value would be lowered or sunk under a faint or doubtful protection, is enormous. Suppose a depreciation of twenty per cent. in the value of the two descriptions of estate above mentioned, the loss sustained by Pennsylvania would be more than one hundred millions of dollars. We give it as our opinion that the depreciation supposed does not exceed, nor equal the measure of the injury which would fall upon this State, by essentially lessening the protection of manufacturing and agricultural labor. Our reasons might be spread out in detail; but they must be apparent to all who know any thing of our present condition, and of our domestic history for the last twelve years.

We forbear noticing many other topics which enter into the consideration of the policy in question; nor should we have troubled you with the views already given, but for the intense anxiety upon the subject of the tariff which agitates the minds of all classes.

Knowing your favorable opinion of the protective system, we have ventured a freedom of remark which, under different circumstances, might have been suppressed.

We remain, with great respect,

Your obedient humble servants,

WM. B. FOSTER.  
DAVID LYNCH.

The Hon. LOUIS McLANE,  
*Sec'y of the Treasury, Washington.*

| QUESTIONS.                                                                                                                            | ANSWERS.                                                         |
|---------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Pittsburgh, Alleghany county, Pennsylvania.                   |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                  | 2. Manufacture of steam engines.                                 |
| 3. When established; and whether a joint stock concern?                                                                               | 3. Established in 1808; first manufactory west of the mountains. |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                       | 4. About ten thousand dollars.                                   |
| 7. Cause of the increase (or decrease, as the case may be) of profit?                                                                 | 7. Decreased since 1824; tariff.                                 |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 9. Steam engines; ten thousand dollars a year.                   |

| QUESTIONS.                                                                                                                                                                                  | ANSWERS.                                                                                           |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------|
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                           | 12. Number of hands averages about 18.                                                             |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                            | 13. Work from 11 to 12 hours per day.                                                              |
| 15. Number of horses or other animals employed?                                                                                                                                             | 15. Steam employed.                                                                                |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                   | 16. From Pittsburgh to all parts of the United States.                                             |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                    | 19. To Mexico.                                                                                     |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                  | 20. For cash and short credits, on approved security.                                              |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition, in the home market, with similar articles imported?                                                | 23. Reduction of the duty on iron.                                                                 |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                            | 24. Don't take piled bars for scrap iron.                                                          |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                | 26. The raw material has increased in the last 18 months \$15 per ton; both wrought and cast iron. |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle? | 32. Not out of the way of foreign competition.                                                     |
| 36. What would be the operation of this change upon the frauds at present supposed to be practised?                                                                                         | 36. Piled iron for scraps.                                                                         |
| 38. Extent of individual and household manufacture in the United States, and how much it has increased since the tariff of 1824?                                                            | 38. Increase in proportion to the increase of population.                                          |

MAHLON ROGERS,  
Steam Engine Maker, Pittsburgh.

## DOCUMENT 14.—No. 4.

*Iron Manufactory, Alleghany County, West Pennsylvania.*

| QUESTIONS.                                                                           | ANSWERS.                                                        |
|--------------------------------------------------------------------------------------|-----------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                            | 1. Alleghany county, Pennsylvania, Birmingham, near Pittsburgh. |
| 2. Kind or description of the manufactory; and whether water, steam, or other power? | 2. Air foundry for iron.                                        |
| 3. When established; and whether a joint stock concern?                              | 3. 1812.                                                        |

DOCUMENT 14.—No. 4.—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                                                               | ANSWERS.                                               |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------|
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                          | 4. 10,000 dollars.                                     |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                                                                                                                                                                                         | 5. 20,000 dollars.                                     |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory, distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of the profit upon that portion which is not borrowed? | 6. 100 per cent.                                       |
| 9. Amount of articles annually manufactured since the establishment of the manufactory; description, quality, and value of each kind?                                                                                                                                                                    | 9. Hollow ware, engine castings, and stoves.           |
| 10. Quantity and value of different kinds of raw materials annually used, distinguishing between foreign and domestic products.                                                                                                                                                                          | 10. 400 tons of pig metal.                             |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                        | 12. Twelve men.                                        |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                         | 13. Twelve hours the whole year.                       |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                         | 14. 1½ dollar per day.                                 |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                          | 15. None.                                              |
| 16. Whether the manufactures find a market at the manufactory; if not, how far they are sent to a market?                                                                                                                                                                                                | 16. At the manufactory.                                |
| 17. Whether foreign articles of the like kind enter into competition with them at such place of sale, and to what extent?                                                                                                                                                                                | 17. None.                                              |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                                 | 18. Pittsburgh.                                        |
| 19. Whether any of the manufactures are exported to foreign countries; and if so, where?                                                                                                                                                                                                                 | 19. None.                                              |
| 20. Whether the manufacture is sold by the manufacturer for cash; and if on credit, at what credit; if bartered, for what?                                                                                                                                                                               | 20. Credit six months.                                 |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                               | 21. Decreased.                                         |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                     | 22. 6½ at commencement, reduced to 3½ cents per pound. |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                                                             | 26. Not prepared to answer.                            |
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                                                                                                                                                     | 28. Cannot say.                                        |

| QUESTIONS.                                                                                                                                                                                                                                                               | ANSWERS.                                   |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------|
| 29. If the duty upon the foreign manufacture of the kind of goods which you make, were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. Continue.                              |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                           | 30. Blank.                                 |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                                                                            | 31. No.                                    |
| 32. Are not the manufactures of salt and iron, remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?                                                                             | 32. Under present circumstances it cannot. |
| 33. Amount of capital, and what portion the borrowed capital bears to that which is real?                                                                                                                                                                                | 33. Not prepared to answer.                |

## DOCUMENT 4.—No. 5.

*Iron Manufactory, Alleghany County, West Pennsylvania.*

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                       |
|---------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. State of Pennsylvania, Alleghany county.                                                    |
| 2. Kind or description of the manufactory, and whether water, steam, or other power?                                                  | 2. Iron of all descriptions by rolling; steam engine, 150 horse.                               |
| 3. When established; and whether a joint stock concern?                                                                               | 3. May, 1829.                                                                                  |
| 4. Capital invested in ground and building, water power and in machinery?                                                             | 4. Fifty thousand dollars.                                                                     |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 5. Paid for metals and blooms \$ 9,000, coal \$ 9,000, wages \$ 24,000.                        |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 9. 1,500 tons iron of the various kinds as per bill of prices, and can be increased one-third. |
| 12. Number of men, women and children employed, and average wages of each class?                                                      | 12. 150 men and boys employed.                                                                 |
| 13. How many hours a day employed? and what portion of the year?                                                                      | 13. Twelve hours, and employed about ten months in the year.                                   |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                             | 16. We find our market principally at home; not more than one-third is sent abroad.            |
| 17. Whether foreign articles of the like kind enter into competition with them at such places of sale; and to what extent?            | 17. No.                                                                                        |

## DOCUMENT 14.—No. 5—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                  | ANSWERS.                                                                                                            |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------|
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                  | 20. Sales generally at a credit of three and four months.                                                           |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased, and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 21. Our prices decreased \$5, or 5 per cent. per ton after the first year, since which they have remained the same. |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                  | 23. The present rate.                                                                                               |

*List of Prices at the Kensington Iron Works.*

|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                                                          | 4. Twenty-eight thousand dollars.                                                                                                                                                      |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                                                                                                                                                                                                                         | 5. Materials bought on time; wages paid cash.                                                                                                                                          |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of the profit upon that portion which is not borrowed?                                 | 6. None made.                                                                                                                                                                          |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                                                    | 9. One thousand tons, one half bar iron, the other nails; bar iron from 95 to 109 dollars per ton; nails \$125.                                                                        |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                                                          | 10. Bloom iron, value at present \$95 per ton; domestic products.                                                                                                                      |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                                                          | 11. Nails manufactured of Swedish iron at Boston are sold at Louisville and Cincinnati at the same price of ours.                                                                      |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                                                        | 12. Twenty-five men; average wages \$1 20; 6 boys, 25 cents.                                                                                                                           |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                                                         | 13. Twelve hours.                                                                                                                                                                      |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                                                                | 16. Sold at the manufactory.                                                                                                                                                           |
| 17. Whether foreign articles of the like kind enter into competition with them at such place of sale; and to what extent?                                                                                                                                                                                                                | 17. There are no iron and nails brought to Pittsburgh. The Boston manufacture of nails has part of the Cincinnati market, all the Louisville, and the whole valley of the Mississippi. |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                                                                 | 18. Ohio and Kentucky principally, but in all the Western States.                                                                                                                      |
| 19. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                                                                                                                                                                                                                | 19. None.                                                                                                                                                                              |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                                                               | 20. Sold on a credit, generally 4 months.                                                                                                                                              |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                     | 22. Bar iron from \$95 to \$109; nails 5½ to 6½, per lb.                                                                                                                               |
| 25. What has been the rate of your profits annually for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. Never made a dividend.                                                                                                                                                             |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                                                                                             | 26. More than three-fourths on the costs of raw material.                                                                                                                              |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make                                                                                                                                                                                                                                                         | 29. We would be compelled to abandon the business.                                                                                                                                     |

DOCUMENT 14.—No. 6.—Continued.

| QUESTIONS.                                                                                                                                                                                  | ANSWERS.                                                           |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------|
| were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?      |                                                                    |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                              | 30. Our capital in building and machinery would be sunk.           |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them? and what is the extent of that circle? | 32. We could not keep the Pittsburgh market at 12½ per cent. duty. |
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of six per cent., and how gradual the reduction should be?                 | 34. We are not prepared to say; at present it yields little more.  |

DOCUMENT 14.—No. 7.

*Kinsland, Lightner, & Cuddy's Iron Foundry, Alleghany County, Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                                                            |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Alleghany county, Pennsylvania.                                                                                                                                  |
| 2. Kind or description of the manufactory, and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Iron foundry. Use a steam engine to turn, grind, &c.                                                                                                             |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. In 1929. A common copartnership.                                                                                                                                 |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. About \$30,000.                                                                                                                                                  |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. About \$30,000 of capital employed—say floating capital in materials, stock, cash, notes, outstanding debts, &c.                                                 |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory: distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6, 7, 8. Cannot state the answers to these questions with any precision—not having made a detailed statement of our affairs since the formation of our partnership. |
| 7. Cause of the increase (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                               |                                                                                                                                                                     |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       |                                                                                                                                                                     |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. About 75 or 80,000 dollars.                                                                                                                                      |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                      | 10. Principally pig metal, about 1000 tons per annum consumed, valued from 35 to \$40,000; coal, bar iron, cost \$5000; no foreign materials used.                  |

## QUESTIONS.

11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?

12. Number of men, women, and children employed, and average wages of each class?

13. How many hours a day employed; and what portion of the year?

14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?

15. Number of horses or other animals employed?

16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?

17. Whether foreign articles of the like kind enter into competition with them at such place of sale; and to what extent?

18. Where are the manufactures consumed?

19. Whether any of the manufactures are exported to foreign countries? and if so, where?

20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?

21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?

22. The prices at which the manufactures have been sold by the manufacturer since the establishment?

23. What rate of duty necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?

24. Is any change necessary in levying or collecting the duty on such articles, to prevent fraud?

25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually?

26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?

## ANSWERS.

11. Cannot answer this question with any exactness. We believe that no similar articles are imported from any country but England, and not under our prices.

12. About 60 men and 15 boys.

13. Not exceeding 11 hours in the day are employed in labor; not more than two weeks lost time in a year.

14. Cannot answer this question further than to say, that, from any information in our reach, we pay higher wages than is paid in foreign countries by 33½ per ct. in general.

15. None.

16. Our principal sales are at home, but a considerable share of our manufactures are sold to the Western and Southern States.

17. There is now but little foreign competition which affects us; some of the smaller articles, such as butt hinges and counter weights are still imported; part of the latter article is made in Pittsburgh.

18. See answer 16.

19. None of our articles exported.

20. Not more than 1-6th of our sales are for cash; the balance on credits averaging about 6 months; 1-6th may be at 12 months.

21. The price of our raw material has risen 25 per cent. within the last year; labor has not changed much, but has rather increased in value.

22. A detail of this kind could not be inserted here.

The success of our business has not resulted so much from the duty on the articles we make, as from the prosperity of the country generally; and as far as we are individually concerned, we are satisfied with the present duties, and mode of collecting them.

25. See answers to 6, 7, 8.

26. Materials about 55 per cent.; labor and contingencies of wear and tear about 30 per cent.; profit 10 to 15 per cent.; but cannot answer with exactness. See answer to 6, 7, 8.

## DOCUMENT 14.—No. 7.—Continued.

## QUESTIONS.

27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?

28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?

29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?

30. If it would cause you to abandon your business, in what way would you employ your capital?

31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?

32. Are not the manufactures of salt and iron, remote from the points of importation, out of foreign competition within a certain circle around them? and what is the extent of that circle?

33. Amount of capital, and what proportion the borrowed capital bears to that which is real?

34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent.? and how gradual the reduction should be?

35. If minimums should be abolished, and the duty assessed upon the actual value of the imported article in the American port, what rate of ad valorem duty would be equivalent to the present with the minimum?

36. What would be the operation of this change upon the frauds at present supposed to be practised?

37. Proportion which the production by the American manufacturers bears to the consumption?

38. Extent of individual and household manufacture in the United States, and how much it has increased since the tariff of 1824?

39. Average profit of money or capital in the United States?

40. Average rate of wages?

## ANSWERS.

27. All other productions excepting those enumerated in answer 10, are of a value too trifling to estimate.

28. Cannot answer.

29. We apprehend that 12½ per cent. ad valorem duty would be insufficient to protect other manufactures, and that their destruction would be ruinous to us. We would rather have the duty on our articles reduced alone, than have a general reduction. The reduction of duties on castings, sadirons, &c. might injure us, but if our customers were destroyed, we must quit business certainly.

30. Have not reflected on this subject.

31. Same answer.

32. We know of no extensive iron or salt establishment which is entirely out of the range of foreign competition.

33. About \$60,000, including \$14,000 owing on real estate. We have no borrowed capital; but in the purchase of stock and transaction of business, we use a credit of from 10 to \$20,000.

Are not qualified to answer these questions.

40. Wages of men in our establishment, from \$16 per month to \$1 50 per day; would average about \$1 12½ per day.

## DOCUMENT 14.—No. 8.

*Lock Manufacturers and Brass and Iron Founders, Alleghany County, Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                               | ANSWERS.                                                                                                                                                                                        |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                                | 1. Pennsylvania, county of Alleghany.                                                                                                                                                           |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                     | 2. Principally door locks of various descriptions. We employ a steam engine.                                                                                                                    |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                                  | 3. In 1813. Joint stock.                                                                                                                                                                        |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                          | 4. Amount of capital invested in ground, buildings, power, and machinery, about 8,000 dollars.                                                                                                  |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                                                                                                                                                                                         | 5. Amount of materials, 2,500 dollars.                                                                                                                                                          |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory, distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of the profit upon that portion which is not borrowed? | 6. 10 per cent. at present; formerly, 15 per cent. and upwards. Borrowed capital, none.                                                                                                         |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                                  | 7. The decrease in profit, owing to the low price of imported articles of an inferior quality, and the advance of the wages of workmen.                                                         |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                    | 9. 8,000 dollars; locks, 5,500 dollars; shackle fasteners, \$1,200; brass and iron work, 1,300 dollars.                                                                                         |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                          | 10. 6 tons iron, \$750; timber, \$300; copper and zinc, \$500; pig mettle, \$150.                                                                                                               |
| 12. Number of men, women, and children, employed, and average wages of each class?                                                                                                                                                                                                                       | 12. 16 men at \$1 per day; 6 boys at 50 cents.                                                                                                                                                  |
| 13. How many hours a day employed?                                                                                                                                                                                                                                                                       | 13. 12 hours the whole year.                                                                                                                                                                    |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                         | 14. Wages same rate otherwise employed in this county and State; in Europe one-half the amount at the same business.                                                                            |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                          | 15. 1 horse.                                                                                                                                                                                    |
| 16. Whether the manufactures find a market at the manufactory; if not, how far they are sent to a market?                                                                                                                                                                                                | 16. Part at the manufactory; the balance 500 to 700 miles.                                                                                                                                      |
| 17. Whether foreign articles of the like kind enter into competition with them at such place of sale, and to what extent?                                                                                                                                                                                | 17. The markets are glutted with the foreign article of an inferior quality, at a low price, which prevents the sale of our articles.                                                           |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                                 | 18. In the western States principally.                                                                                                                                                          |
| 19. Whether any of the manufactures are exported to foreign countries; and if so, where?                                                                                                                                                                                                                 | 19. None are exported.                                                                                                                                                                          |
| 20. Whether the manufacture is sold by the manufacturer for cash; and if on credit, at what credit; if bartered, for what?                                                                                                                                                                               | 20. Cash, or 90 days' credit. We barter for materials, groceries, and produce.                                                                                                                  |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                               | 21. The cost of some has decreased in consequence of machinery; are not prepared to say how much. Materials have decreased since the commencement of the establishment from 50 to 100 per cent. |

| QUESTIONS.                                                                                                                                                                                                                                                              | ANSWERS.                                                                                                                                                                                                                        |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 24. Is any change necessary in levying or collecting the duty on such articles, to prevent fraud?                                                                                                                                                                       | 24. We cannot say what change is necessary. We infer, from the low price of the imported article, that frauds are practised in some shape or other.                                                                             |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                            | 26. 20 per cent. the cost of the raw material; 50 per cent. wages of labor; 20 per ct. tools and machinery.                                                                                                                     |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. The duty being reduced to 12½ per cent., and the imported article depreciating in price proportionably, we should be compelled to abandon our business, although a corresponding reduction might take place in all imports. |

The imported articles, of the description we manufacture, are thrown into the market at such low prices, that we believe it impossible they could have paid the regular duties. They are sold in our eastern cities for less amount than would pay the cost of material and wages of labor here. It is true, they are of an inferior quality, yet they prevent, in a great measure, the sale of a good article. The higher price of iron, being from 300 to 400 per cent. higher here than in England, together with cost of labor being so much greater, will prevent us for some time from competing with the British manufacturers.

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                             |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. State of Pennsylvania, county Allegheny, city Pittsburgh.                                         |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Iron rolling mill and nail machines; steam power.                                                 |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. January, 1830; yes.                                                                               |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. Forty thousand dollars.                                                                           |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                                                                                                                                                                                     | 5. Twenty-nine thousand dollars.                                                                     |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory: distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. About 12½ per cent. on the capital none borrowed.                                                 |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                              | 7. Decrease occasioned by competition from rival establishments increasing since the tariff of 1824. |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 8. From 15 to 20 per cent.                                                                           |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                                                           |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                                                      | 9. 1,000 tons of iron and nails, bar, sheet, round and square sheet, hoop, boiler rods, and plough wing iron, and 2, 3, 4, 5, 6, 8, 10, 12, 16 and 20 gr. nails.   |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                                                            | 10. Blooms, 1,000 tons, \$95,000; coal \$90,000, bent \$3,600.                                                                                                     |
| 12. Number of men, women and children employed, and average wages of each class?                                                                                                                                                                                                                                                           | 12. We employ 46 persons, who receive on an average \$1 10 each daily.                                                                                             |
| 13. How many hours a day employed? and what portion of the year?                                                                                                                                                                                                                                                                           | 13. Ten hours a day; all the year.                                                                                                                                 |
| 14. Rate of wages of similar classes otherwise employed in the same State and country, in other States, and in foreign countries?                                                                                                                                                                                                          | 14. About the same; in foreign countries about one-fourth, and in England not so much as a fourth.                                                                 |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                                                            | 15. Our works require 50 horses to supply us with blooms.                                                                                                          |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                                                                  | 16. Some is sold at home, but generally to Ohio, Kentucky, Indiana, Tennessee, Mississippi, Illinois, &c.                                                          |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                                                                                                 | 17. They do, particularly in nails; $\frac{1}{4}$ cent per pound rise on our nails would send 1,000 kegs afloat on the Atlantic.                                   |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                                                                   | 18. One-half at home, and the rest in question 18.                                                                                                                 |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                                                                                                   | 19. None. They could sooner send iron and nails to us than we to them.                                                                                             |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                                                                 | 20. We make our sales at 4 and 6 months' credit, and deduct 5 per cent. for cash.                                                                                  |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                                                                | 21. It has increased the cost, because we must make a better article at less price, labor the same.                                                                |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                       | 22. Bar iron at \$95, \$97, \$100, and \$105 per ton.                                                                                                              |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market, with similar articles imported?                                                                                                                                                                                                | 23. The present existing duty on iron.                                                                                                                             |
| 24. Is any change necessary in levying or collecting the duty on such articles, to prevent fraud?                                                                                                                                                                                                                                          | 24. Yes; the system of drawback should be done away, and the duty should be fixed at the value in this country.                                                    |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. Our profits have been gradually increasing from 4 to 10 and 12 per cent on our capital; we have made no dividends, and any profits go to increase the capital. |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                                                                                               | 26. \$95 a ton for blooms, \$5 for wages and fuel, and we received \$5 a ton profit for changing blooms to bar iron.                                               |

## DOCUMENT 14.—No. 9.—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                              | ANSWERS.                                                                                                                                                                              |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                        | 27. We pay our hands (who have families, in all 143 persons) cash for their labor; and we cannot tell what is the consumption of agricultural productions.                            |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. We would abandon our business rather than lose on it.                                                                                                                             |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                          | 30. In purchasing real estate over which Government could have no control.                                                                                                            |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                                                                           | 31. Any other business would do better than a losing one.                                                                                                                             |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?                                                                             | 32. Pittsburgh is remote, and yet we feel any fluctuations in sea coast towns. If we raise our nails ½ or ¼ cent, it would cause thousands of kegs to deluge the west by New Orleans. |
| 33. Amount of capital; and what portion the borrowed capital bears to that which is real?                                                                                                                                                                               | 33. Sixty-nine thousand dollars; not borrowed.                                                                                                                                        |
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent.; and how gradual the reduction should be?                                                                                               | 34. The manufacturer of iron would require more than 6 per cent. to induce him to run the risks of trade, when he could buy bank stock without risk.                                  |
| 36. What would be the operation of this change upon the frauds at present supposed to be practised?                                                                                                                                                                     | 36. It would stop them; they could not be so numerous.                                                                                                                                |
| 37. Proportion which the production by the American manufacturers bears to the consumption?                                                                                                                                                                             | 37. In a few years we (all iron works) can supply the whole consumption.                                                                                                              |
| 38. Extent of individual and household manufacture in the United States, and how much it has increased since the tariff of 1824?                                                                                                                                        | 38. Manufactures increase 25 per cent. annually in number.                                                                                                                            |
| 39. Average profit of money or capital in the United States?                                                                                                                                                                                                            | 39. 15 to 20 per cent.; in dry goods business, more.                                                                                                                                  |
| 40. Average rate of wages?                                                                                                                                                                                                                                              | 40. 90 cents to \$1 per day.                                                                                                                                                          |

## DOCUMENT 14.—No. 10.

*John Arthur's Steam Engine Manufactory, Pittsburgh, Alleghany County.*

| QUESTIONS.                                                                           | ANSWERS.                                                         |
|--------------------------------------------------------------------------------------|------------------------------------------------------------------|
| 2. Kind or description of the manufactory; and whether water, steam, or other power? | 2. Steam engines and castings for machinery of all descriptions. |

## DOCUMENT 14.—No. 10—Continued.

| QUESTIONS.                                                                                                                            | ANSWERS.                                                              |
|---------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------|
| 3. When established; and whether a joint stock concern?                                                                               | 3. Eighteen hundred and fifteen.                                      |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                       | 4. Twenty thousand dollars.                                           |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                      | 5. Thirty-four thousand dollars.                                      |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 9. Steam engines and castings made this year, forty thousand dollars. |
| 12. Number of men, women, and children employed, and average wages of each class?                                                     | 12. Hands employed, forty.                                            |
| 13. How many hours a day employed; and what portion of the year?                                                                      | 13. Average number of hours, ten per day.                             |

|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------|
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                  | 17. Foreign steam engines are sold at New Orleans: to what extent not known.                                       |
| 18. Where are the manufactures consumed?                                                                                                                                                    | 18. Principally in the States west and southwest of this.                                                          |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                    | 19. A few steam engines are sent to South America.                                                                 |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                  | 20. Generally on a credit of six months.                                                                           |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                | 26. Materials 60 cents, wages 32 cents, profits 8 cents.                                                           |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle? | 32. Foreign iron is not at present used in this place, but it would be if the duties were reduced to 12½ per cent. |

PENNS FOUNDRY AND STEAM ENGINE MANUFACTORY,  
Pittsburgh, May 8th, 1832.

GENTLEMEN: The above are the answers we have to submit to the queries which you addressed to us. Very respectfully, your obedient servants,

McCLUNG, PRATT & WADE.

To Messrs. D. LYNCH and WM. B. FOSTER.

## DOCUMENT 14.—No. 12.

*Iron and Nail Manufactories, Pittsburgh, Alleghany County, Pennsylvania.*

The following may be depended on as a correct statement of the iron and nails manufactured at Pittsburgh, Pennsylvania, in the years ending 30th September, 1829, 1830, and 1831; as also the prices in those three years, the number of hands employed, and the expenses of transporting the blooms from the different forges.

P. SHOENBERGER & SON,

|                                                   |      |       |   |   |
|---------------------------------------------------|------|-------|---|---|
| Manufactured, from 30th September, 1828, to 1829, | tons | 1,591 | 7 | 2 |
| 1829, to 1830,                                    | do   | 1,869 | 1 |   |
| 1830, to 1831,                                    | do   | 2,049 | 7 | 3 |

Of this quantity there were manufactured into nails:

First year, 373½ tons.

Second do., 483½ do.

Third do., 534 do.

Seventy-eight hands employed annually, having 234 dependants.

This establishment is capable of manufacturing, annually, 2,500 tons.

LYON, SHORB & Co.

|---------------------------------------------------|------|-------|----|
| Manufactured, from 30th September, 1828, to 1829, | tons | 1,005 | 5  |
| 1829, to 1830,                                    | do   | 1,159 | 15 |
| 1830, to 1831,                                    | do   | 1,539 | 15 |

Of this quantity there were made into nails:

First year, tons 182 17.

Second do., do. 300 1.

Third do., do. 276 10.

Fifty-four hands employed annually, having 162 dependants.

This establishment is capable of manufacturing, annually, 2,500 tons.

## DOCUMENT 14.—No. 12—Continued.

**MASON, MILTENBERGER & Co.**

|                                                                |       |   |   |
|----------------------------------------------------------------|-------|---|---|
| Manufactured, from 14th January, 1829, to Sept. 30, 1829, tons | 395   | 2 | 3 |
| 30th Sept., 1829, do. 1830, do.                                | 750   | 5 |   |
| 1830, do. 1831, do.                                            | 1,084 | 5 | 3 |

Of this quantity there were made into nails:

First year, tons 101 10.

Second do., do. 285 10.

Third do., do. 473 5.

Forty-six hands employed annually, having 138 dependants.

This establishment is capable of manufacturing, annually, 2,500 tons.

**H. SPANG & SON,**

Manufactured, from 30th September, 1830, to 30th September, 1831, 860 tons.

Of this quantity there were made into nails, 240 do.

Forty-five hands employed, having 140 dependants.

This establishment is capable of manufacturing *only* 1,500 tons.

**S. SMITH & Co.**

Manufactured, from 1st January, 1830, to 30th September, 1831, tons 5 50 lbs.

Of this quantity were made into nails, 2 48

Twenty men and five boys employed, having 43 dependants.

This establishment is capable of manufacturing *only* 1,500 tons.

**LEONARD, SEMPLE & LEONARD,**

Manufactured, from 12th May, to 30th September, 1829, tons 300 5

30th Sept., 1829, to do. 1830, do. 1,282 9

1830, to do. 1831, do. 1,390 9

One hundred and fifty-seven hands annually employed, having 472 dependants.

This establishment is capable of manufacturing, annually, 2,500 tons.

**HENRY BLAKE & Co.**

Manufactured, from 1st October, 1829, to 30th September, 1830, tons 1,156 7

30th Sept., 1830, to do. 1831, do. 1,808 6

Of this quantity were made into nails, 509 6

Seventy-one hands annually employed, having 144 dependants.

This establishment is capable of manufacturing *only* 2,500 tons.

The above factories give employment to 110 teams, of six horses each; which consume upwards of 190,000 bushels of grain. 110 carters, having 330 dependants.

The cash price of iron, the first of the above years, was \$122 per ton.

Do. do. the second year, was \$100 do.

Do. do. the third year, was \$95 do.

It will be seen by the above statement, that five of the abovementioned factories commenced operations in 1828.

**RECAPITULATION.**

Iron manufactured in Pittsburgh, from 30th September, 1828, to 1829, tons 3,291 19

30th do. 1829, to 1830, do. 6,217 17

30th do. 1830, to 1831, do. 9,282 02

Increase second year, 2,926 tons.

Third do. 3,065 do.

Nails manufactured first year, 556 tons.

Second do. 1,154 do.

Third do. 2,096 do.

Hands annually employed, 586. Dependants, 1,863. Mouths fed, 2,249. Teams of six horses each, 110. 660 horses annually employed. 190,000 bushels of grain consumed.

## DOCUMENT 14.—No. 13.

*Alexander and John McNickle's Armstrong Blast Furnace, Armstrong County, Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                   | ANSWERS.                                                                                                  |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                    | 1. Pennsylvania, Armstrong county.                                                                        |
| 2. Kind or description of the manufactory, and whether water, steam, or other power?                                                                                                                                                                         | 2. Blast furnace; steam power.                                                                            |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                      | 3. 1826. Two partners.                                                                                    |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                              | 4. Twenty thousand dollars.                                                                               |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                      | 7. Fluctuation in price of manufactured product.                                                          |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                               | 8. Six per cent.                                                                                          |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                        | 9. Six hundred tons pig iron, at \$28 per ton.                                                            |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                              | 10. Iron ore.                                                                                             |
| 12. Number of men, women, and children, employed; and average wages of each class?                                                                                                                                                                           | 12. Forty men at \$17 per month.                                                                          |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                             | 13. Ten hours, nine months in the year.                                                                   |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                              | 15. Twenty-five horses and three yoke of oxen.                                                            |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                    | 16. Pittsburgh market, 55 miles. (Water carriage.)                                                        |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                     | 18. Pittsburgh, and west.                                                                                 |
| 19. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                                                                                                                                    | 19. None.                                                                                                 |
| 20. Whether the manufacture is sold by the manufacturer for cash? and, if on credit, at what credit? if bartered, for what?                                                                                                                                  | 20. Sold at six months' credit.                                                                           |
| 21. Whether the cost of the manufactured article (to the manufacturer,) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 21. Diminished in price since the establishment, say 10 per cent.                                         |
| 24. Is any change necessary in levying or collecting the duty on such articles, to prevent fraud?                                                                                                                                                            | 24. Supposed to be.                                                                                       |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                 | 26. The cost in the whole three items.                                                                    |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                             | 27. The greatest proportion of the supplies necessary for carrying on the business are domestic articles. |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would                                                                                     | 29. Abandon the business.                                                                                 |

## DOCUMENT 14.—No. 13—Continued.

| QUESTIONS.                                                                                                                                                                                   | ANSWERS.                                                                 |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------|
| it cause you to abandon your business, or would you continue to manufacture at reduced prices?                                                                                               |                                                                          |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                               | 30. Could not say.                                                       |
| 31. Is there any pursuit in which you could engage from which you could derive greater profits, even after a reduction of the import duties to 12½ per cent?                                 | 31. Cannot say.                                                          |
| 32. Are not the manufactures of salt and iron, remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle? | 32. Remote from foreign importation, but not out of foreign competition. |

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                   |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Armstrong county, Pennsylvania.                                         |
| 2. Kind or description of the manufactory, and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Blast furnace; steam power.                                             |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. In 1827.                                                                |
| 4. Capital invested in ground and buildings, water power and machinery?                                                                                                                                                                                                                              | 4. Ten thousand dollars.                                                   |
| 5. Average amount in materials, in cash for the purchase of materials, and payment of wages?                                                                                                                                                                                                         | 5. Three hours being too short notice to investigate and answer correctly. |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory, distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed? | 6. Ditto.                                                                  |
| 7. Causes of the increase (or decrease) as the case may be) of profit?                                                                                                                                                                                                                               | 7. Ditto.                                                                  |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. Ditto.                                                                  |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                      | 10. Ditto.                                                                 |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                      | 11. Ditto.                                                                 |

| QUESTIONS.                                                                                                                                                                                                                                                 | ANSWERS.                                                                    |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------|
| 12. Number of men, women and children employed, and average wages of each class?                                                                                                                                                                           | 12. Three hours being too short notice to investigate and answer correctly. |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                           | 13. Average ten hours all the year.                                         |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                            | 15. 18 horses and 4 yoke of oxen.                                           |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                  | 16. At Pittsburgh.                                                          |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                 | 17. Replied to in answer to query 5.                                        |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                   | 18. Ditto.                                                                  |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                 | 20. Six months' credit.                                                     |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 21. Replied to in answer to query 5.                                        |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                       | 22. Thirty dollars per 2,240 lbs.                                           |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                 | 23. Sixty-two and a half cents per 112 lbs.                                 |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                           | 24. Yes.                                                                    |

## DOCUMENT 14.—No. 15.

*Wire Manufactory, Beaver County, Pennsylvania.*

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                           |
|---------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Beaver county, Pennsylvania.                                                                    |
| 2. Kind or description of the manufactory, and whether water, steam, or other power?                                                  | 2. Wire from No. 1 to 35. Water power.                                                             |
| 3. When established, and whether a joint stock concern?                                                                               | 3. September 15, 1838. Joint stock.                                                                |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                       | 4. Thirteen thousand seven hundred dollars.                                                        |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 9. We use from 75 to 100 tons of iron annually. Our wire is known to be superior to that imported. |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------|
| 10. Quantity and value of different kinds of raw materials used, distinguishing between foreign products and domestic products?                                                                                                                                                                                                            | 10. Juniatta of a superior quality.                                                                                          |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                                                            | 11. Same price as the domestic article.                                                                                      |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                                                          | 12. Ten men at one dollar per day.                                                                                           |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                                                           | 13. Twelve hours per day, about 11½ months.                                                                                  |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                                                           | 14. Unknown.                                                                                                                 |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                                                            | 15. One horse and six oxen.                                                                                                  |
| 16. Whether the manufactures find a market at the manufactory? if not, how far they are sent to a market?                                                                                                                                                                                                                                  | 16. From Pittsburgh to St. Louis, Missouri, Philadelphia, and New Orleans.                                                   |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                                                                   | 18. Answer given in No. 16.                                                                                                  |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                                                                                                   | 19. Sold on a credit of six months.                                                                                          |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                       | 22. The price has declined since we commenced in 1828.                                                                       |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market, with similar articles imported?                                                                                                                                                                                                | 23. The present rate of duty is only sufficient.                                                                             |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                                                                                                           | 24. Tinned iron wire has been fraudulently imported, and is still believed to be so imported.                                |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. Eight per cent. per annum has been our profit.                                                                           |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                                                                    | 29. If any reduction in duty should take place, we should unavoidably abandon it.                                            |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                                                                                             | 30 & 31. In answer to questions Nos. 30 and 31, it is not a light matter to abandon a business which is our main dependence. |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                                                                                                                                              |                                                                                                                              |

## DOCUMENT 14.—No. 15—Continued.

| QUESTIONS.                                                                                                                                                                                                       | ANSWERS.                                                                                           |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------|
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?                      | 32. In some cases only. Relative to the manufacture of iron, it is certainly incorrect.            |
| 34. What amount of reduction in the duties would enable the actual or real capital employed, to yield an interest of six per cent.? and how gradual the reduction should be?                                     | 34. We should not feel disposed to manufacture for six per cent. profit, subject to risk and loss. |
| 35. If minimums should be abolished, and the duty assessed upon the actual value of the imported article in the American port, what rate of ad valorem duty would be equivalent to the present with the minimum? | 35. Not answered.                                                                                  |
| 37. Proportion which the production by the American manufacturers bears to the consumption?                                                                                                                      | 37. Nearly the whole amount is American, and, if encouraged, we intend to meet fully the demand.   |

We commenced the manufacture on the faith of the protection given by Congress in 1828. Since when the article has fallen lower than it has ever been known in the United States; and as to the quality of our manufacture, there is none better.

TOWNSEND, BAIRD & CO.

## DOCUMENT 14.—No. 16.

*Maria Forges, Bedford County, Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                              |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Pennsylvania, Bedford county, 25 miles distant from Bedford, on the Roaring spring.                |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Works styled Maria Forges, contain ten fires, embracing three buildings, propelled by water power. |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. In ——— commenced making iron, and since increased the establishment. An individual concern.        |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. About \$150,000, embracing about 12 thousand acres of land, 67 buildings.                          |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                                                                                                                                                                                     | 5. Annual expense is about \$126,500, for wages, feed, &c. besides the implements, wagons, teams, &c. |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. No borrowed capital.                                                                               |
| 7. Cause of the increase (or decrease, as the case may be) of profit?                                                                                                                                                                                                                                | 7. There are fluctuations in the article.                                                             |

| QUESTIONS.                                                                                                                                                                                                                                                              | ANSWERS.                                                                                                                                                                |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                          | 8. Capital otherwise employed in small concerns very often produce from 25 to 30 per cent.                                                                              |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                   | 9. About 1,660 tons of blooms, bar iron, rolled from Juniatta blooms, far superior to any English iron.                                                                 |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                         | 10. No foreign products used.                                                                                                                                           |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                         | 11. Cannot ascertain what blooms would cost delivered here from abroad.                                                                                                 |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                       | 12. Average about 100 hands with 65 families; average rate of wages 22 dollars per month, exclusive of foreman, who works by the ton at \$ 6 per ton for making blooms. |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                        | 13. Monthly hands from sunrise to sunset, foreman by turns during day and night, wood choppers by cord.                                                                 |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                        | 14. Wages are not so high at any other manual labor in this country, except recently at some public works.                                                              |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                         | 15. 68 horses and mules owned by this concern.                                                                                                                          |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                               | 16. The owner of this concern manufactures the blooms at his own rolling mill, situate at Pittsburgh.                                                                   |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                              | 17. No; none brought into the interior.                                                                                                                                 |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                | 18. West and southwestern parts of the United States.                                                                                                                   |
| 19. Whether any of the manufactures are exported to foreign countries? If so, where?                                                                                                                                                                                    | 19. None from here, and not much after it is converted into malleable iron, unless some to the south.                                                                   |
| 20. Whether the manufacture is sold by the manufacturer for cash? If on credit, at what credit? If bartered, for what?                                                                                                                                                  | 20. It is not sold for cash here, nor indeed sold at all, until it is manufactured at his own rolling mill.                                                             |
| 24. Is any change necessary in levying or collecting duties on such articles, to prevent fraud?                                                                                                                                                                         | 24. Unacquainted with the mode of levying, and only know by information that frauds do exist.                                                                           |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                            | 26. No raw materials purchased.                                                                                                                                         |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                        | 27. About 8,000 bushels of rye and corn, 3,000 bushels of wheat, 800 bushels potatoes, and 150 tons hay, in proportion worth between 8 and 9,000 dollars.               |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. Would be obliged to abandon the works.                                                                                                                              |

## DOCUMENT 14.—No. 16—Continued.

| QUESTIONS.                                                                                                                                                                                                       | ANSWERS.                                                                                                             |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------|
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                   | 30. The capital consists in lands that I could not sell; of course could not turn it to any other purpose.           |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                    | 31. Many, if I could turn it into available capital.                                                                 |
| 33. Amount of capital, and what proportion the borrowed capital bears to that which is real?                                                                                                                     | 33. Entire amount of capital is worth \$ 244,000, none borrowed; if the business is ruined it is not worth \$ 3,600. |
| 35. If minimums should be abolished, and the duty assessed upon the actual value of the imported article in the American port, what rate of ad valorem duty would be equivalent to the present with the minimum? | 35. Remote from sea ports, I am unacquainted with the mode of levying and collecting, &c.                            |
| 36. What would be the operation of this change upon the frauds at present supposed to be practised?                                                                                                              | 36. Not sufficiently acquainted with the rate of those frauds to give an opinion.                                    |
| 40. Average rate of wages?                                                                                                                                                                                       | 40. \$ 17 per month common labor throughout the State, though higher at iron works.                                  |

For PETER SHOENBERGER,  
J. STEINMAN.

## DOCUMENT 14.—No. 17.

*Hanover Iron Works, Bedford County, Pennsylvania.*

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                                                                                                                                                                                                                                         |
|---------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Bedford county, Pennsylvania.                                                                                                                                                                                                                                                                                 |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                  | 2. One blast furnace, one forge with three fires, and one forge two fires; water power.                                                                                                                                                                                                                          |
| 3. When established; and whether a joint stock concern?                                                                               | 3. One forge 1822; furnace 1827; 1 forge 1830. Individual concern.                                                                                                                                                                                                                                               |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                       | 4. \$ 30,000 real property and machinery, and \$ 8,000 in stock, say coal, ore, cordwood, teams, &c.                                                                                                                                                                                                             |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 5. \$ 37,872, including freight to place of market. In this amount 525 tons of pigs (to make the blooms and iron) is charged as if they had been purchased, which would have been the case if the furnace and forges had been separate concerns, and in answer to query 9 the pigs made are put down as if sold. |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 9. 550 tons pig metal, at \$ 25 per ton; 20 tons castings, at \$ 60 per ton; 50 tons bar iron, at \$ 100 per ton; 300 tons blooms, at \$ 75 per ton. These are the average prices at the different places of market.                                                                                             |
| 12. Number of men, women, and children employed?                                                                                      | 12. Seventy laboring hands; 225 persons, including laborers, dependant on the works.                                                                                                                                                                                                                             |
| 15. Number of horses or other animals employed?                                                                                       | 15. Forty horses and mules.                                                                                                                                                                                                                                                                                      |

## DOCUMENT 14.—No. 17.—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                              | ANSWERS.                                                                                                                                                                                     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 16. Whether the manufactures find a market at the manufactory; if not, how far they are sent to a market?                                                                                                                                                               | 16. Market for bar iron at the works, blooms at Baltimore, 100 miles, and Pittsburgh, 140 miles.                                                                                             |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                              | 17. Foreign iron enters into competition with blooms at Baltimore.                                                                                                                           |
| 20. Whether the manufacture is sold by the manufacturer for cash; and if on credit, at what credit; if bartered, for what?                                                                                                                                              | 20. Bar iron and castings bartered for country produce of different kinds; blooms sold on a credit from four to six months.                                                                  |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                              | 23. The tariff of 1828 is barely sufficient; any reduction in the tariff of 1828 would be ruinous to iron manufactories.                                                                     |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                        | 27. 40,000 lbs. of beef and pork; 4,000 bushels rye and corn; 2,000 bushels wheat; 50 tons hay; 500 bush. potatoes; 3,300 bundles straw; and about \$4,000 worth other domestic productions. |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. I would abandon my present business.                                                                                                                                                     |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                          | 30. This question cannot be well answered, as my real property would be rendered useless or of little value.                                                                                 |

JOHN IRVINE.

## DOCUMENT 14.—No. 18.

*Iron Furnace, Bedford County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                          | ANSWERS.                                                                                         |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                           | 1. State of Pennsylvania, and county of Bedford.                                                 |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                | 2. A blast furnace; water power.                                                                 |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                             | 3. Established in 1827; and a joint stock concern.                                               |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                     | 4. The capital invested in ground, buildings, &c., is \$35,000.                                  |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                     | 5. The average amount in materials, including ore, coal, wood, &c., is \$13,000.                 |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory, distinguishing between the rate of profit upon that portion of the capital which is borrowed after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed? | 6. No capital borrowed; profit about ten per cent, making no charge for timber and ore consumed. |

DOCUMENT 14.—No. 18—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                                                                                                                                                                            |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7. Cause of the increase (or decrease, as the case may be) of profit?                                                                                                                                                                                                                                                                      | 7. Profits less than former years, owing to an increase of competition, and lower prices for the article.                                                                                                                                                                           |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                                                      | 9. We have made, annually, 1,000 tons of pig iron, of a good quality, worth twenty-four dollars per ton, and twenty-five tons of castings, worth fifty dollars per ton.                                                                                                             |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                                                          | 12. We give employment to 100 men, and 375 persons are dependant upon the establishment.                                                                                                                                                                                            |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                                                           | 13. About twelve hours every day; all the year.                                                                                                                                                                                                                                     |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                                                            | 15. We employ 33 horses and 12 mules, exclusive of a number of teams of horses, to which employment is given incidentally.                                                                                                                                                          |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                                                                  | 16. We find a market for a very small part at the factory; the principal amount sent to the west, about 100 miles, and have but little foreign competition at this time.                                                                                                            |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                                                                   | 18. In Ohio, Kentucky, Indiana, &c.                                                                                                                                                                                                                                                 |
| 19. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                                                                                                                                                                                                                  | 19. None exported to foreign countries.                                                                                                                                                                                                                                             |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                                                                 | 20. A small part is sold for cash; a portion is exchanged for bar iron, and all kinds of provisions.                                                                                                                                                                                |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                                                                | 21. The cost of manufacturing is regulated by the price of provisions.                                                                                                                                                                                                              |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                       | 22. From 22 to 24 dollars per ton for metal.                                                                                                                                                                                                                                        |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                                 | 23. That established by the tariff of 1828.                                                                                                                                                                                                                                         |
| 25. What has been the rate of your profits, annually, for the last three years? And if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. Profits are about 10 per cent., not charging for timber or ore consumed. No dividend made, having increased the improvements.                                                                                                                                                   |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                           | 27. There is annually consumed at this establishment 2,200 bushels of wheat, 4,600 bushels of rye and corn, 500 bushels of potatoes, 400 bushels of oats, 35 tons of hay, 12,000 pounds of beef, 20,000 pounds of pork, besides a large amount of foreign and domestic merchandise. |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                                                                                             | 30. My property would be worth nothing, and should have no capital.                                                                                                                                                                                                                 |

## DOCUMENT 14.—No. 18.—Continued.

| QUESTIONS.                                                                                                                                                                                  | ANSWERS.                                                                                                                          |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------|
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to twelve and a half per cent.?                 | 31. We know of no business but the one we are engaged in: what profits can be made, therefore, cannot say.                        |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle? | 32. The foreign competition does not reach us for about 40 miles; but a small part of our article is consumed within that circle. |
| 33. Amount of capital; and what proportion the borrowed capital bears to that which is real?                                                                                                | 33. No capital borrowed.                                                                                                          |
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of six per cent.; and how gradual the reduction should be?                 | 34. We do not know relative to the reduction of duties, but believe competition will very soon reduce prices, and profits also.   |

KING, SWOOPE & Co.  
Per J. McKIERNAN.

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                                             |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Bedford county, Pennsylvania.                                                                                                                     |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. One blast furnace, one forge with three fires; water power.                                                                                       |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. One forge 1830, one furnace 1831; individual concern.                                                                                             |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. Twenty-three thousand three hundred dollars in real property and machinery; seven thousand dollars in stock, say, coal, ore, cordwood, teams, &c. |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                                                                                                                                                                                     | 5. Average cost for my furnace \$11,500, and one forge \$23,300 annually. This includes materials and wages of hands.                                |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. As the manufactory has been so short a time in operation, this query cannot be well answered.                                                     |
| 12. Number of men, women and children employed, and average wages of each class?                                                                                                                                                                                                                     | 12. Sixty men, average wages \$20 per month; 210 persons dependant on the works.                                                                     |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                                                                     | 13. Ten hours per day, and twelve months in the year.                                                                                                |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                      | 15. Thirty-two horses and six oxen.                                                                                                                  |

DOCUMENT 14.—No. 19—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                              | ANSWERS.                                                                                                                                                                             |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                               | 16. Bar iron at the manufactory; blooms at Pittsburgh, 120 miles.                                                                                                                    |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                              | 17. Foreign iron excludes us from an eastern market.                                                                                                                                 |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                              | 23. The tariff of 1828 is sufficient.                                                                                                                                                |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                        | 27. 35,000 pounds beef and pork, 3,500 bushels rye and corn, 2,200 bushels wheat, 45 tons hay, 3,000 bundles straw, 560 bushels potatoes, and \$3,000 of other domestic productions. |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. Abandon at once.                                                                                                                                                                 |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                          | 30. I cannot tell at present.                                                                                                                                                        |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to twelve and a half per cent.?                                                                                             | 31. There are many.                                                                                                                                                                  |

JONATHAN LESLIE.

DOCUMENT 14.—No. 20.

*Iron Works, Bedford County, West Pennsylvania.*

| QUESTIONS.                                                                                                                            | ANSWERS.                                                  |
|---------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Bedford county, State of Pennsylvania.                 |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                  | 2. One forge, water power, three fires.                   |
| 3. When established; and whether a joint stock concern?                                                                               | 3. Upwards of twenty years; joint stock.                  |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                       | 4. About six thousand eight hundred and fifty dollars.    |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                      | 5. Sixteen thousand seven hundred and fifty dollars.      |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                               | 7. The tariff of 1828 has caused a small increase.        |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 9. Bar iron 150 tons, at \$110; blooms 100 tons, at \$70. |

## DOCUMENT 14.—No. 30—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                             | ANSWERS.                                                                                                       |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------|
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                        | 10. 375 tons pig iron, at \$25; 80,000 bushels coal, at 3 cents, \$2,400.                                      |
| 12. Number of men, women and children employed, and average wages of each class?                                                                                                                                                                                       | 12. 27 men, averaged at \$21 per month.                                                                        |
| 13. How many hours a day employed? and what portion of the year?                                                                                                                                                                                                       | 13. Nine hours, 12 months in the year.                                                                         |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                        | 15. 10 horses, two yoke of oxen.                                                                               |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                              | 16. Bar iron at factory; blooms at Pittsburgh, 120 miles.                                                      |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                             | 17. Prevents it being sent to eastern market.                                                                  |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                               | 18. Bar iron consumed in vicinity; blooms in West.                                                             |
| 19. Whether any of the manufactures are exported to foreign countries? And if so, where?                                                                                                                                                                               | 19. None exported.                                                                                             |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                             | 23. The present duty.                                                                                          |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                       | 27. 970 bushels rye, 540 bushels wheat, 200 bushels potatoes, 1,050 bundles straw, 20 tons hay, 40 cwt. bacon: |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent, with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. Abandon.                                                                                                   |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to twelve and a half per cent.?                                                                                            | 31. There are many.                                                                                            |

For SWOOPE & ROYER,  
H. PIPER.

| QUESTIONS.                                                                                                                                                                                                                                                            | ANSWERS.                                                                                                                                                                                         |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                               | 3. Established in 1815: joint stock.                                                                                                                                                             |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                       | 4. \$23,675, real property and machinery.                                                                                                                                                        |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                       | 5. \$24,368, including freight; in this isn't 440 tons pig iron to make the blooms and iron.                                                                                                     |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                 | 9. 50 tons blooms, \$65 per ton; 250 tons bar iron, at \$900 per ton.                                                                                                                            |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                     | 12. 35 men.                                                                                                                                                                                      |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                       | 15. 14 horses.                                                                                                                                                                                   |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                             | 16. Market for bar iron at the works: blooms at Pittsburgh, one hundred and twenty miles.                                                                                                        |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                            | 17. Foreign iron excludes us from an eastern market.                                                                                                                                             |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what? if bartered, for what?                                                                                                                                                   | 20. Bar iron bartered for country produce of different kinds; blooms sold on a credit of six months.                                                                                             |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market, with similar articles imported?                                                                                                                           | 23. The tariff of 1828 is barely sufficient. Any reduction in the tariff of 1828 would be ruinous to iron manufactories.                                                                         |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                      | 27. 30,000 pounds of beef and pork; 2,000 bushels rye and corn; 1,000 bushels wheat; 20 tons hay; 300 bushels potatoes; 1,500 bundles straw, and about \$1,500 worth other domestic productions. |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per ct., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. We would abandon our present business.                                                                                                                                                       |

For SWOOPE & KING,  
THOMAS KING.

| QUESTIONS.                                                                          | ANSWERS.                          |
|-------------------------------------------------------------------------------------|-----------------------------------|
| 1. State and county in which the manufactory is situated?                           | 1. Pennsylvania, Crawford county. |
| 2. Kind or description of the manufactory; and whether water, steam or other power? | 2. Iron foundry; steam power.     |

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                             |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------|
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. Established in 1838. Individual concern.                                                          |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. \$5,000.                                                                                          |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                                                                                                                                                                                     | 5. \$11,000.                                                                                         |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory: distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed? | 6. \$2,000 yearly.                                                                                   |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                              | 7. Somewhat increased. Improvement of the country.                                                   |
| 8. Rates of profit on capital otherwise employed, in the same State and county?                                                                                                                                                                                                                      | 8. 20 per cent.                                                                                      |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. Ploughs, stoves, machinery and hollow ware; amount \$14,000; generally sold at 5 cents per pound. |
| 10. Quantity and value of different kinds of raw materials used;—distinguishing between foreign products and domestic products?                                                                                                                                                                      | 10. All domestic; pig iron, 125 tons, \$80 per ton, including carriage.                              |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                      | 11. Do not know.                                                                                     |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                    | 12. 12 men, 22 dollars per month.                                                                    |
| 13. How many hours a day employed? and what portion of the year?                                                                                                                                                                                                                                     | 13. 10 hours; all the year.                                                                          |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                     | 14. \$20.                                                                                            |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                      | 15. 2 horses and 1 yoke of oxen.                                                                     |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                            | 16. In the surrounding country.                                                                      |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                                                           | 17. No competition.                                                                                  |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                             | 18. West Pennsylvania.                                                                               |
| 19. Whether any of the manufactures are exported to foreign countries;—and if so, where?                                                                                                                                                                                                             | 19. None.                                                                                            |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                           | 20. Mostly bartered for country produce.                                                             |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                           | 21. Decreased, owing to a better knowledge of the business.                                          |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                        |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------|
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                       | 22. Generally 5 cents per lb.                                   |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                                 | 23. A little more tariff.                                       |
| 24. Is any change necessary in levying or collecting the duty on such articles, to prevent fraud?                                                                                                                                                                                                                                          | 24. Do not know                                                 |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually. | 25. \$3,000.                                                    |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                                                                                               | 26. Raw material one half; wages 30 per ct.; profits 20 per ct. |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                           | 27. \$2,000; grain, meat, &c., raised in the country.           |
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                                                                                                                                                                                       | 28. Do not know.                                                |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                                                                    | 29. Continue to manufacture.                                    |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                                                                                             | 30. Perhaps in mercantile business.                             |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to twelve and a half per cent.?                                                                                                                                                                | 31. Yes.                                                        |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?                                                                                                                                                | 32. Some are.                                                   |
| 33. Amount of capital; and what proportion the borrowed capital bears to that which is real?                                                                                                                                                                                                                                               | 33. \$16,000. None borrowed.                                    |

JACOB HERRINGTON.

## DOCUMENT 14.—No. 23.

*Iron Manufactory, Centre County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                                                                                                                 |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                                                                  | 1. At Philipsburg, Centre county, Pennsylvania.                                                                                                                                                                          |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                                                       | 2. A forge, rolling mill, wire drawing and screw mill, and cupola furnace; power both water and steam.                                                                                                                   |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                                                                    | 3. The forge in 1817-18; other works since 1823; one owner.                                                                                                                                                              |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                                                            | 4. In screw mill about \$66,000; other works about \$30,000.                                                                                                                                                             |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory, distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed?                                       | 6. On iron works there was heavy loss from 1818 to 1822; since then a profit averaging about 6 per cent.; on screws there has been a heavy loss ever since 1825-6.                                                       |
| 7. Cause of the increase (or decrease, as the case may be) of profit?                                                                                                                                                                                                                                                                      | 7. For a fuller answer, see endorsement.                                                                                                                                                                                 |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                                                           | 13. Ten hours in winter, 11 spring and fall, 12 summer.                                                                                                                                                                  |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                                                                  | 16. Very small portion at home; iron to Pittsburgh; screws both to seaboard and western waters.                                                                                                                          |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?                                                                                                                                                                                                                 | 17. Having stated in No. 7 the discount allowed on foreign screws, it seems superfluous to add that they enter into competition to a ruinous extent.                                                                     |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                                                                   | 18. Cities on seaboard and western waters.                                                                                                                                                                               |
| 19. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                                                                                                                                                                                                                  | 19. No.                                                                                                                                                                                                                  |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                                                                 | 20. Six months' credit, and barter for hardware, tin ware, provisions, nails, and a variety of other things.                                                                                                             |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                                                                | 21. Somewhat decreased, from improvements in machinery and greater skill of the hands.                                                                                                                                   |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                       | 22. Price of screws to the importers, the same as it would cost them to import, but allowing them six months' credit; price on the western waters 20 per cent. less than charged by the hardware houses in Philadelphia. |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                                 | 23. Forty per cent. levied upon the selling prices in the principal cities, or otherwise specific duties equal thereto.                                                                                                  |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. On the iron works a profit of about 6 per cent.; on the screw mill a loss averaging nearly \$3,000 per annum. The whole is the sole property of the subscriber.                                                      |

| QUESTIONS.                                                                                                                                                                                                                                                              | ANSWERS.                                                                                                                                                                        |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                                                                                                                    | 28. There is a very large establishment in New Jersey, owned in New York, others in Vermont and Massachusetts, and two or three smaller in Philadelphia.                        |
